Ramakrishna Rao, 2016-03-15 This expanded and revised text includes thirteen experimental reports five new to this edition and seven review articles involving meta analysis and the assessment of evidence in specific areas of psi research The author provides a representative sample of the extensive literature in the controversial field of parapsychology and presents a few basic experiments illustrating various procedures and broadly reflecting the major trends of psi research Possible experimental procedures cumulative evidence showing the replicability of individual experiments and promising areas of psi research are also discussed Instructors considering this book for use in a course may request an examination copy here [Guidelines for Extrasensory Perception Research](#) Julie Milton, 1997 Laboratory tests of extrasensory perception have been going on for over 50 years attracting international interest within the scientific community Some scientists believe that these studies are well conducted and that positive results obtained support the existence of ESP In contrast critics have argued that there are serious methodological errors in such experimnts and that their results should be ignored

Hans Eysenck: Consensus And Controversy Sohan Modgil, Celia Modgil, 2012-10-12 During the last forty years Hans Eysenck's brilliant contribution to knowledge has been well known world wide From its early transmission his work has not been without its critics Naturally criticisms persist although his work continues to be frequently acknowledged with great admiration in the channels of psychology With such prolific work it would seem justified to consider the discrepancies the omissions together with the various interpretations which have been and are currently being highlighted

Intercultural Encounters Wim M. J. van Binsbergen, 2003 This book brings together fifteen essays investigating aspects of interculturality Like its author it operates at the borderline between social anthropology and intercultural philosophy It seeks to make a contribution to intercultural philosophy by formulating with great precision and painful honesty the lessons deriving from extensive intercultural experiences as an anthropologist Its culminating section presents an intercultural philosophy revolving on the tenet cultures do not exist The kaleidoscopic nature of intercultural experiences is reflected in the diversity of these texts Many belong to a field that could be described as meta anthropology others are more clearly philosophical occasionally they spill over into belles lettres ancient history and comparative cultural and religious studies The ethnographic specifics supporting the arguments are diverse deriving from various African situations in which the author has conducted participatory field research Tunisia Zambia Botswana and South Africa

Randi's Prize

Robert McLuhan, 2010

James The Amazing Randi is a stage magician who says he has a million dollars for anyone who can convince him they have psychic powers No one has even come close to winning proof say sceptical scientists that there is no such thing as the paranormal But are they right In this illuminating and often provocative analysis Robert McLuhan examines the influence of Randi and other debunking sceptics in shaping scientific opinion about such things as telepathy psychics ghosts and near death experiences He points out that scientific researchers who investigate these things at first hand overwhelmingly consider them to be genuinely anomalous But this has shocking implications for science for society and for even perhaps for ourselves as individuals Hence the sceptics insistence that they should rather be attributed to fraud imagination and wishful thinking However this extraordinary and little understood aspect of consciousness has much to tell us about the human situation McLuhan suggests And at a time when militants are polarising the debate about religion its mystical spiritual element offers an optimistic and enlightened way forward Randi's Prize is aimed at anyone interested in spirituality or those curious to know the truth about paranormal claims It's an intelligent and readable analysis of scientific research into the paranormal which uniquely also closely examines the arguments of well known sceptics

The Elusive Quarry

Ray Hyman, 1989-04

Ever since the Society for Psychical Research was founded over a hundred years ago parapsychologists have been attempting to prove the existence of paranormal phenomena things like clairvoyance telepathy precognition and remote viewing This research into what is now often called psi has become increasingly technical Controlled laboratory experiments have replaced systematic surveys of spontaneous occurrences complicated statistical analyses have replaced anecdotal data In short psychical research has aspired to the standards of hard science With what results Ray Hyman is supremely qualified to say A research psychologist held in the highest esteem by both parapsychologists and skeptics Ray Hyman here reviews the history and methods of psychical research The Elusive Quarry is Hyman's fascinating fair minded critique of the field a book designed not to debunk but to discern In Part 1 Parapsychology Hyman gives us a historical overview Over the past hundred years what have been the strongest claims made for the paranormal Hyman gives close scrutiny to what have been called ganzfeld experiments a body of research considered by parapsychologists to be especially compelling Part 2 Scientists and the Paranormal focuses on the scientists themselves from Michael Faraday and Sir William Crookes in the last century to Helmut Schmidt and his recent work with random event generators Scientists have been interacting with an admittedly unique group of people psychics Are their methods of testing and reporting appropriate for the phenomena under examination Hyman steps outside of the laboratory for his book's third part Psychic Phenomena and evaluates the claims of water witching occult healing and remote viewing In doing so he demonstrates that one's interpretation of scientific data is strongly affected by one's underlying belief or lack of belief in paranormal phenomena In Part 4 The Psychology of Belief

Hyman vividly explains cold reading that ability psychics have to convince strangers that they know all about them It s an ability anybody can develop Hyman says The psychology is common not psychic *The Sphinx and the Rainbow* David Loye,1998-12 The Sphinx and the Rainbow explores how the frontal brain may interact with the right and left brain in forecasting the future how the new psychophysics may explain old questions about mind brain relationships and the mystifying phenomena of precognitions Loye s book comprises a historic synthesis of neuropsychology psychology parapsychology and physics His book is a pioneering attempt to put together a coherent picture of the predicting mind
