Fritz Haber Chemiker Nobelpreistraeger Deutscher Jude:

Fritz Haber Dietrich Stoltzenberg, 1994-03-31 Der Chemiker Fritz Haber 1868-1934 war genial und umstritten zugleich. Seine bahnbrechenden Arbeiten auf dem Gebiet der Thermodynamik führten zur Ammoniaksynthese und wurden 1918 mit dem Nobelpreis honoriert. Seine vielseitige wissenschaftliche Tätigkeit belebte die chemische Forschung in Deutschland ebenso nachhaltig wie seine vielfältigen Beiträge zu Forschungsförderung und Wissenschaftspolitik. Brennender Ehrgeiz und leidenschaftlicher Patriotismus der sich z.B. in seinem bedingungslosen Einsatz für den Gaskrieg manifestierte machten den deutschen Juden Fritz Haber jedoch auch zu einer der umstrittensten Persönlichkeiten des zwanzigsten Jahrhunderts. Das Scheitern seiner Ehen mit Clara Immerwahr und Charlotte Nathan zeigen die komplizierten Seiten des Menschen Fritz Haber auf dessen Leben mit seiner Emigration 1933 eine tragische Wende nahm. Mit diesem Buch legt Dietrich Stoltzenberg die lange erwartete umfassende Biographie Fritz Habers vor. Mit Hilfe zahlreicher zum Teil noch unveröffentlichter Quellen und Dokumente entwirft der Autor ein detailliertes und faszinierendes Bild dieses genialen Wissenschaftlers. Dieses Buch ist ein Muss für Historiker und Naturwissenschaftler sowie für alle, die sich für die Geschichte Deutschlands im frühen 20. Jahrhundert interessieren.

The Synthetic Nitrogen Industry in World War I Anthony S. Travis, 2015-07-03 This concise brief describes how the demands of World War I, often referred to as the Chemists' War, led to the rapid emergence of a new key industry based on fixation of atmospheric nitrogen. Then as now, nitrogen products including nitric acid and nitrates were essential for both fertilizers and in the manufacture of modern explosives. During the first decade of the twentieth century, this stimulated research into and application of novel processes. This book illustrates how from late 1914 the relations and developments in the first modern military-industrial complex enabled the great capital expenditures and technological advances that accelerated massive expansion, particularly of the BASF-Haber-Bosch high pressure process, that determined the direction of the post-war chemical industry.

A History of the Jews in the Modern World Howard M. Sachar, 2007-12-18 The distinguished historian of the Jewish people Howard M. Sachar gives us a comprehensive and enthralling chronicle of the achievements and traumas of the Jews over the last four hundred years. Tracking their fate from Western Europe's age of mercantilism in the seventeenth century to the post-Soviet and post-imperialist Islamic upheavals of the twenty-first century, Sachar applies his renowned narrative skill to the central role of the Jews in many of the most impressive achievements of modern civilization, whether in the rise of economic capitalism or of political socialism, in the discoveries of theoretical physics or applied medicine, in higher literary criticism or mass communication, and popular entertainment. As his account unfolds and moves from epoch to epoch, from continent to continent, from Europe to the Americas and the Middle East, Sachar evaluates communities that until lately have been underestimated in the perspective of Jewish and world history, among them Jews of Sephardic provenance of the Moslem regions and of Africa. By the same token, Sachar applies a master's hand in describing and deciphering the Jews' unique exposure and functional usefulness to

totalitarian movements fascist Nazi and Stalinist In the process he shines an unsparing light on the often widely dissimilar behavior of separate European peoples and on separate Jewish populations during the Holocaust A distillation of the author's lifetime of scholarly research and teaching experience A History of the Jews in the Modern World provides a source of unsurpassed intellectual richness for university students and educated laypersons alike

The German Chemical Industry in the Twentieth Century John E. Lesch, 2013-04-17 In the twentieth century dyes pharmaceuticals photographic products explosives insecticides fertilizers synthetic rubber fuels and fibers plastics and other products have flowed out of the chemical industry and into the consumer economies war machines farms and medical practices of industrial societies The German chemical industry has been a major site for the development and application of the science based technologies that gave rise to these products and has had an important role as exemplar stimulus and competitor in the international chemical industry This volume explores the German chemical industry's scientific and technological dimension its international connections and its development after 1945 The authors relate scientific and technological change in the industry to evolving German political and economic circumstances including two world wars the rise and fall of National Socialism the post war division of Germany and the emergence of a global economy This book will be of interest to historians of modern Germany to historians of science and technology and to business and economic historians

Hitler's Scientists John Cornwell, 2004-09-28 An eye opening account of the rise of science in Germany through to Hitler's regime and the frightening Nazi experiments that occurred during the Reich A shocking account of Nazi science and a compelling look at the dramatic rise of German science in the nineteenth century its preeminence in the early twentieth and the frightening developments that led to its collapse in 1945 this is the compelling story of German scientists under Hitler's regime Weaving the history of science and technology with the fortunes of war and the stories of men and women whose discoveries brought both benefits and destruction to the world Hitler's Scientists raises questions that are still urgent today As science becomes embroiled in new generations of weapons of mass destruction and the war against terrorism as advances in biotechnology outstrip traditional ethics this powerful account of Nazi science forms a crucial commentary on the ethical role of science

Germany and the Second World War Volume IX/II Jörg Echternkamp, 2014-03 Volume IX II of this series draws on a range of historical sources to explore the effect that the Second World War had on the people of Germany whether they were practically involved in the war effort or struggling to maintain a normal existence

Science and Conscience Jost Lemmerich, 2011-08-10 James Franck 1882-1964 was one of the twentieth century's most respected scientists known both for his contributions to physics and for his moral courage During the 1920s Franck was a prominent figure in the German physics community His research into the structure of the atom earned him the Nobel Prize in Physics in 1925 After the Nazis seized power in 1933 Franck resigned his professorship at

Gottingen in protest against anti Jewish policies He soon emigrated to the United States where at the University of Chicago he began innovative research into photosynthesis When the Second World War began Franck was recruited for the Manhattan Project With Enrico Fermi and Leo Szilard he created a controlled nuclear chain reaction which led to the creation of a nuclear weapon During the final months of the war however Franck grew concerned about the consequences of using such a weapon He became the principal author of the celebrated Franck Report which urged Truman not to use the atomic bomb and warned that a nuclear arms race against the Soviet Union would be an inevitable result After the War

Franck turned his attention back to photosynthesis his discoveries influenced chemistry as well as physics **Lise Meitner**

Ruth Lewin Sime,1996-03-10 Lise Meitner 1878 1968 was a pioneer of nuclear physics and co discoverer with Otto Hahn and Fritz Strassmann of nuclear fission Braving the sexism of the scientific world she joined the prestigious Kaiser Wilhelm Institute for Chemistry and became a prominent member of the international physics community Of Jewish origin Meitner fled Nazi Germany for Stockholm in 1938 and later moved to Cambridge England Her career was shattered when she fled Germany and her scientific reputation was damaged when Hahn took full credit and the 1944 Nobel Prize for the work they had done together on nuclear fission Ruth Sime s absorbing book is the definitive biography of Lise Meitner the story of a brilliant woman whose extraordinary life illustrates not only the dramatic scientific progress but also the injustice and destruction that have marked the twentieth century **Homenatge professor Josep M.Costa. The essays explore the efforts of soldiers and statesmen, industrialists and financiers, professionals and civilian activists to adjust to the titanic pervasive pressures that the military stalemate on the western front imposed on belligerent and neutral societies

Inventing Polymer Science Yasu Furukawa, 2016-11-11

It would be difficult to overestimate the importance of polymer science to life in the twentieth century. Developments in polymer chemistry and engineering have led not only to the creation of a variety of substances such as synthetic fibers, synthetic rubber and plastic but also to discoveries about proteins, DNA and other biological compounds that have revolutionized western medicine. For these reasons the history of the discipline tells an important story about how both our material and intellectual worlds have come to be as they are. Yasu Furukawa explores that history by tracing the emergence of macromolecular chemistry, the true beginning of modern polymer science. It is a lively book given human interest through its focus on the work of two of the central figures in the development of macromolecular chemistry, Hermann Staudinger and Wallace Carothers.

In *Inventing Polymer Science*, Furukawa examines the origins and development of the scientific work of Staudinger and Carothers, illuminates their different styles in research and professional activities and contrasts the peculiar institutional and social milieux in which they pursued their goals

The Toxic Museum Helene Tello, 2023-12-29

The Toxic Museum examines the use of pesticides in German museum collections at the end of the 19th and early 20th centuries. It reconstructs the research of substances against harmful insects in museum collections within the historical context of the formation of nation states, colonialism, a strengthening chemical industry, the First World War and the resulting broad-based hygiene movement through the lens of the Ethnologisches Museum (Ethnological Museum) in Berlin. Because of their persistence, the consequences of the use of pesticides in museum collections are now unmistakable and well documented in many places. Numerous objects are highly contaminated and are only accessible under difficult conditions regarding occupational health and safety. This creates obstacles for conservation and scientific processing as well as for mediation in the context of exhibitions and external loans. The most precarious and difficult situations arise when contaminated museum objects are repatriated to their countries of origin. This monograph examines contemporary challenges in the 21st century museum landscape and contextualises the history of pesticide use at the turn of the 20th century. The Toxic Museum will be of great interest to students and scholars working in conservation, museology, monument preservation, art and cultural studies, ethnology, history and economics.

Chemical Achievers Mary Ellen Bowden, 1997

This book was designed to help teachers supplement science curricula with human stories of discovery in the chemical sciences. Chemical Achievers presents the lives and work of two types of achievers. First are the historical greats, those chemical scientists most often referred to in introductory courses. Second are those scientists who made contributions in areas of the chemical sciences that are of special relevance to modern life and the career choices students will make. The human faces summarized in this book range from Robert Boyle to Glenn Seaborg and Stephanie Kwolek. In this lively and comprehensive collection of photographs and

biographies Bowden illuminates how much the chemical sciences owe to the individual achiever Over 150 images can be easily reproduced as overhead transparencies or other visual teaching aids **Hertha Sponer: a Woman'S Life as a Physicist in the 20Th Century "So You Won't Forget Me"** Marie-Ann Maushart,2011-11-21 Just three women qualified for a professorship in physics in Germany before the Second World War All three began their careers with great promise all three had to leave Hitlers Germany among them Hertha Sponer An ambitious girl she had to struggle to achieve the education she craved culminating in a Ph D at the University of Gttingen There followed an apprenticeship in Berlin and work under the aegis of James Franck around the time he received the Nobel Prize Their academic world was shattered by the Nazis Sponer reluctantly embarked on a new life in North Carolina She succeeded as Professor of Physics at Duke University She became a recognized authority on the electronic spectra of aromatic molecules benzene and derivatives Late in life she became the second wife of James Franck **Das Kulturerbe deutschsprachiger Juden** Elke-Vera Kotowski,2014-12-17
