Hayes,Jean-Arcady Meyer,2002 Proceedings of the Seventh International Conference on Simulation of Adaptive Behavior   **Modelling Natural Action Selection** Anil K. Seth,Tony J. Prescott,Joanna J. Bryson,2011-11-10 Action selection is the task of doing the right thing at the right time It requires the assessment of available alternatives executing those most appropriate and resolving conflicts among competing goals and possibilities Using advanced computational modelling this book explores cutting edge research into action selection in nature from a wide range of disciplines from neuroscience to behavioural ecology and even political science It delivers new insights into both detailed and systems level attributes of natural intelligence and demonstrates advances in methodological practice Contributions from leading researchers cover issues including whether biological action selection is optimal neural substrates for action selection in the vertebrate brain perceptual selection in decision making and interactions between group and individual action selection This first integrated review of action selection in nature contains a balance of review and original research material consolidating current knowledge into a valuable reference for researchers while illustrating potential paths for future studies   **Artificial Life 8** Russell K. Intrinsically Motivated Learning in Natural and Artificial Systems Gianluca Baldassarre,Marco Mirolli,2013-03-29 It has become clear to researchers in robotics and adaptive behaviour that current approaches are yielding systems with limited autonomy and capacity for self improvement To learn autonomously and in a cumulative fashion is one of the hallmarks of intelligence and we know that higher mammals engage in exploratory activities that are not directed to pursue goals of immediate relevance for survival and reproduction but are instead driven by intrinsic motivations such as curiosity interest in novel stimuli or surprising events and interest in learning new behaviours The adaptive value of such intrinsically motivated activities lies in the fact that they allow the cumulative acquisition of knowledge and skills that can be used later to accomplish fitness enhancing goals Intrinsic motivations continue during adulthood and in humans they underlie lifelong learning artistic creativity and scientific discovery while they are also the basis for processes that strongly affect human well being such as the sense of competence self determination and self esteem This book has two aims to present the state of the art in research on intrinsically motivated learning and to identify the related scientific and technological open challenges and most promising research directions The book introduces the concept of intrinsic motivation in artificial systems reviews the relevant literature offers insights from the neural and behavioural sciences and presents novel tools for research The book is organized into six parts the chapters in Part I give general overviews on the concept of intrinsic motivations their function and possible mechanisms for implementing them Parts II III and IV focus on three classes of intrinsic motivation mechanisms those based on predictors on novelty and on competence Part V discusses mechanisms that are complementary to intrinsic motivations and Part VI introduces tools and experimental frameworks for investigating intrinsic motivations The contributing authors are among the pioneers carrying out fundamental work on this topic drawn from related disciplines such as artificial intelligence robotics artificial life evolution machine learning developmental psychology cognitive science and neuroscience The book will be of value to graduate students and academic researchers in these domains and to engineers engaged with the design of autonomous adaptive robots The contributing authors are among the pioneers carrying out fundamental work on this topic drawn from related disciplines such as artificial intelligence robotics artificial life evolution machine learning developmental psychology cognitive science and neuroscience The book will be of value to graduate students and academic researchers in these domains and to engineers engaged with the design of autonomous adaptive robots   Reconstructing the Cognitive World Michael Wheeler,2005 An argument for a non Cartesian philosophical foundation for cognitive science that combines elements of Heideggerian phenomenology a dynamical systems approach to cognition and insights from artificial intelligence related robotics   *Advances in Learning Classifier Systems* Pier L.
