Satellite Power System ,1981 *Concepts of Operations for a Reusable Launch Vehicle* Michael A. Rampino,1997 The United States is embarked on a journey toward maturity as a spacefaring nation One key step along the way is development of a reusable launch vehicle RLV The most recent National Space Transportation Policy August 1994 assigned improvement and evolution of current expendable launch vehicles to the Department of Defense while National Aeronautical Space Administration NASA is responsible for working with industry on demonstrating RLV technology The purpose of this study is to help ensure the US military especially the USAF is prepared to take advantage of RLVs should the NASA led effort to develop an RLV demonstrator prove successful The focus of this study is an explanation of how the US military could use RLVs by describing and analyzing two concepts of operations Four major conclusions resulted from the analysis First RLVs have military potential They can perform a variety of missions including responsive spacelift reconnaissance and strike However the economic feasibility of using RLVs for earth to earth transportation is questionable Second design choices for an operational RLV will have effects on risk cost capability and operations efficiency Trade offs will have to be made between NASA commercial and military requirements if all three parties are to use the same fleet of RLVs Third increased investment in propulsion technology development is warranted to ensure success Fourth the top priority for the RLV program even from the military s perspective should remain cheap and responsive access to space The research led to three recommendations First the US military should become a more active participant in the RLV program to ensure its requirements are defined and incorporated Second America should not pursue development of operational RLVs before the technology is ready **Energy**
