Friendly Fire The Accidental Shootdown:

Friendly Fire Scott A. Snook, 2002-01-27 Friendly Fire covers the accidental shootdown over northern Iraq of the U S Black Hawks It asks questions such as how could this happen why did the F 15 pilots misidentify the Black Hawks and why did the AWACS crew fail to intervene

Friendly Fire Scott A. Snook, 2011-09-19 On April 14 1994 two U S Air Force F 15 fighters accidentally shot down two U S Army Black Hawk Helicopters over Northern Iraq killing all twenty six peacekeepers onboard In response to this disaster the complete array of military and civilian investigative and judicial procedures ran their course After almost two years of investigation with virtually unlimited resources no culprit emerged no bad guy showed himself no smoking gun was found This book attempts to make sense of this tragedy a tragedy that on its surface makes no sense at all With almost twenty years in uniform and a Ph D in organizational behavior Lieutenant Colonel Snook writes from a unique perspective A victim of friendly fire himself he develops individual group organizational and cross level accounts of the accident and applies a rigorous analysis based on behavioral science theory to account for critical links in the causal chain of events By explaining separate pieces of the puzzle and analyzing each at a different level the author removes much of the mystery surrounding the shootdown Based on a grounded theory analysis Snook offers a dynamic cross level mechanism he calls practical drift the slow steady uncoupling of practice from written procedure to complete his explanation His conclusion is disturbing This accident happened because or perhaps in spite of everyone behaving just the way we would expect them to behave just the way theory would predict The shootdown was a normal accident in a highly reliable organization

Ten Questions About Human Error Sidney Dekker, 2004-12-27 *Ten Questions About Human Error* asks the type of questions frequently posed in incident and accident investigations people's own practice managerial and organizational settings policymaking classrooms Crew Resource Management Training and error research It

is one installment in a larger transformation that has begun to identify both deep rooted constraints and new leverage points of views of human factors and system safety The ten questions about human error are not just questions about human error as a phenomenon but also about human factors and system safety as disciplines and where they stand today In asking these questions and sketching the answers to them this book attempts to show where current thinking is limited where vocabulary models ideas and notions are constraining progress This volume looks critically at the answers human factors would typically provide and compares contrasts them with current research insights Each chapter provides directions for new ideas and models that could perhaps better cope with the complexity of the problems facing human error today As such this book can be used as a supplement for a variety of human factors courses

It Should Never Happen Again Dr Mike

Lauder,2013-09-28 In It Should Never Happen Again Dr Mike Lauder questions the value of public inquiries Every day we hear about another inquiry being set up or why the last one failed to deliver the hoped for outcomes A great deal of time and taxpayers money is spent on inquiries and even more on implementing their recommendations but the author suggests that those conducting inquiries might be considered by their own test criminally negligent in the way they do so and that it is no surprise that they do not lead to the learning they should The focus of Mike Lauder s research is the gaps between what is known what knowledge is used by practitioners and those who judge them He contends that the difference between the judicial perspective and that of practitioners who are judged by the inquiry process creates barriers that impede others from learning Crucially inquiry outcomes do not assist the leadership of organisations to improve risk governance It Should Never Happen Again is based on research into high profile public inquiries and presidential commissions in the UK the USA Continental Europe and elsewhere Embracing issues ranging from terrorist attacks to pollution fire and air disasters criminal cases banking and bribery scandals and the state of public services Mike Lauder contrasts the judicial perspective of those who inquire the academic perspective of those who know and the practical perspective of those who are required to act and offers new models for understanding risk and its governance

Borch,2010-07-15 More than one million men and women have received the Purple Heart since its creation as an award for

military merit in 1932 This book provides a brief history of the Purple Heart with a focus on how the decoration s award criteria have evolved over the last 75 years The book then takes a representative look at Purple Heart recipients from all the services by conflict starting with the Civil War and concluding with the on going conflicts in Afghanistan and Iraq **Safety at the Sharp End** Rhona Flin,Paul O'Connor,2017-05-15 Many 21st century operations are characterised by teams of workers dealing with significant risks and complex technology in competitive commercially driven environments Informed managers in such sectors have realised the necessity of understanding the human dimension to their operations if they hope to improve production and safety performance While organisational safety culture is a key determinant of workplace safety it is also essential to focus on the non technical skills of the system operators based at the sharp end of the organisation These skills are the cognitive and social skills required for efficient and safe operations often termed Crew Resource Management CRM skills In industries such as civil aviation it has long been appreciated that the majority of accidents could have been prevented if better non technical skills had been demonstrated by personnel operating and maintaining the system As a result the aviation industry has pioneered the development of CRM training Many other organisations are now introducing non technical skills training most notably within the healthcare sector *Safety at the Sharp End* is a general guide to the theory and practice of non technical skills for safety It covers the identification training and evaluation of non technical skills and has been written for use by individuals who are studying or training these skills on CRM and other safety or human factors courses The material is also suitable for undergraduate and post experience students studying human factors or industrial safety programmes *Safety Differently* Sidney Dekker,2014-06-23 The second edition of a bestseller *Safety Differently* Human Factors for a New Era is a complete update of *Ten Questions About Human Error A New View of Human Factors and System Safety* Today the unrelenting pace of technology change and growth of complexity calls for a different kind of safety thinking Automation and new technologies have resulted in new roles decisions and vulnerabilities whilst practitioners are also faced with new levels of complexity adaptation and constraints It is becoming increasingly apparent that conventional approaches to safety and human factors are not equipped to cope with these challenges and that a new era in safety is necessary In addition to new material covering changes in the field during the past decade the book takes a new approach to discussing safety The previous edition looked critically at the answers human factors would typically provide and compared contrasted them with current research and insights at that time The edition explains how to turn safety from a bureaucratic accountability back into an ethical responsibility for those who do our dangerous work and how to embrace the human factor not as a problem to control but as a solution to harness See What s in the New Edition New approach reflects changes in the field Updated coverage of system safety and technology changes Latest human factors ergonomics research applicable to safety Organizations companies and industries are faced with new demands and pressures resulting from the dynamics and nature of the modern marketplace and from the development and introduction of new technologies This new

era calls for a different kind of safety thinking a thinking that sees people as the source of diversity insight creativity and wisdom about safety not as the source of risk that undermines an otherwise safe system It calls for a kind of thinking that is quicker to trust people and mistrust bureaucracy and that is more committed to actually preventing harm than to looking good This book takes a forward looking and assertively progressive view that prepares you to resolve current safety issues in any field

How Could This Happen? Jan U. Hagen, 2018-07-26 The first comprehensive reference work on error management blending the latest thinking with state of the art industry practice on how organizations can learn from mistakes Even today the reality of error management in some organizations is simple Don't make mistakes And if you do you're on your own unless you can blame someone else In most it has moved on but it is still often centered around quality control with Six Sigma Black Belts seeking to eradicate errors with an unattainable goal of zero But the best organizations have gone further They understand that mistakes happen be they systemic or human They have realized that rather than being stigmatized errors have to be openly discussed analyzed and used as a source for learning In *How Could This Happen* Jan Hagen collects insights from the leading academics in this field covering the prerequisites for error reporting such as psychological safety organizational learning and innovation safety management systems and the influence of senior leadership behavior on the reporting climate This research is complemented by contributions from practitioners who write about their professional experiences of error management They provide not only ideas for implementation but also offer an inside view of highly demanding work environments such as flight operations in the military and operating nuclear submarines Every organization makes mistakes Not every organization learns from them It's the job of leaders to create the culture and processes that enable that to happen Hagen and his team show you how
