

From Dream To Discovery On Being A Scien

Carl C. Gaither, Alma E. Cavazos-Gaither

From Dream To Discovery On Being A Scien:

From Dream to Discovery Hans Selye, 1964 2000 Gift from the estate of Dr Cecil Wittson Chase, Chance, and Creativity James H. Austin, 2003-08-15 A personal story of the ways in which persistence chance and creativity interact in biomedical research This first book by the author of Zen and the Brain examines the role of chance in the creative process James Austin tells a personal story of the ways in which persistence chance and creativity interact in biomedical research the conclusions he reaches shed light on the creative process in any field Austin shows how in his own investigations unpredictable events shaped the outcome of his research and brought about novel results He then goes beyond this story of serendipity to propose a new classification of the varieties of chance drawing on his own research and examples from the history of science including the famous accidents that led Fleming to the discovery of penicillin Finally he explores the nature of the creative process considering not only the environmental and neurophysiological correlates of creativity but also the role of intuition in both scientific discoveries and spiritual guests This updated MIT Press paperback edition includes a new introduction and recent material on medical research creativity and spirituality **Gaither's Dictionary of Scientific** Ouotations Carl C. Gaither, Alma E. Cavazos-Gaither, 2008-01-08 Scientists and other keen observers of the natural world sometimes make or write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an unprecedented collection of approximately 18 000 quotations related to a broad range of scientific topics The Whys of a Scientific Life John R. Helliwell, 2018-10-03 The first in the Focus Series on Global Science Education The Whys of a Scientific Life examines why scientists do what they do Working from a diverse background in scientific research including academic departments of physics and chemistry as well as the scientific civil service the author describes the choices scientists make Fundamentally a scientist asks questions based on curiosity In addition the environment is very important By influencing their elected governments society itself shapes the scientific research that is undertaken by scientists This book follows on naturally from the author's last book Skills for a Scientific Life which is a how to guide for scientists and those that aspire to engage in science as a career Key Features User friendly and concise this text dissects the whys of science and discovery The author has outstanding experience in mentoring science students and staff and also in outreach activities for the public and students of all ages including schools The final chapter emphasises the joys of the scientist in research **Objectivity** Lorraine Daston, Peter L. Galison, 2021-02-02 Objectivity has a history and it is full of surprises In Objectivity Lorraine Daston and Peter Galison chart the emergence of objectivity in the mid nineteenth century sciences and show how the concept differs from alternatives truth to nature and trained judgment This is a story of lofty epistemic ideals fused with workaday practices

in the making of scientific images From the eighteenth through the early twenty first centuries the images that reveal the deepest commitments of the empirical sciences from anatomy to crystallography are those featured in scientific atlases the compendia that teach practitioners of a discipline what is worth looking at and how to look at it Atlas images define the working objects of the sciences of the eye snowflakes galaxies skeletons even elementary particles Galison and Daston use atlas images to uncover a hidden history of scientific objectivity and its rivals Whether an atlas maker idealizes an image to capture the essentials in the name of truth to nature or refuses to erase even the most incidental detail in the name of objectivity or highlights patterns in the name of trained judgment is a decision enforced by an ethos as well as by an epistemology As Daston and Galison argue atlases shape the subjects as well as the objects of science To pursue objectivity or truth to nature or trained judgment is simultaneously to cultivate a distinctive scientific self wherein knowing and knower converge Moreover the very point at which they visibly converge is in the very act of seeing not as a separate individual but as a member of a particular scientific community Embedded in the atlas image therefore are the traces of consequential choices about knowledge persona and collective sight Objectivity is a book addressed to any one interested in the elusive and crucial notion of objectivity and in what it means to peer into the world scientifically From Animals to Robots and Back: Reflections on Hard Problems in the Study of Cognition Jeremy L. Wyatt, Dean D. Petters, David C. Hogg, 2014-07-10 Cognitive Science is a discipline that brings together research in natural and artificial systems and this is clearly reflected in the diverse contributions to From Animals to Robots and Back In tribute to Aaron Sloman and his pioneering work in Cognitive Science and Artificial Intelligence the editors have collected a unique collection of cross disciplinary papers that include work on intelligent robotics philosophy of cognitive science emotional research computational vision comparative psychology and human computer interaction Key themes such as the importance of taking an architectural view in approaching cognition run through the text Drawing on the expertize of leading international researchers contemporary debates in the study of natural and artificial cognition are addressed from complementary and contrasting perspectives with key issues being outlined at various levels of abstraction From Animals to Robots and Back will give readers with backgrounds in the study of both natural and artificial cognition an important window on the state of the art in cognitive systems research **Scientific Elite** , Scientific Elite is about Nobel prize winners and the well defined stratification system in twentieth century science It tracks the careers of all American laureates who won prizes from 1907 until 1972 examining the complex interplay of merit and privilege at each stage of their scientific lives and the creation of the ultra elite in science The study draws on biographical and bibliographical data on laureates who did their prize winning research in the United States and on detailed interviews with forty one of the fifty six laureates living in the United States at the time the study was done Zuckerman finds laureates being successively advantaged as time passes These advantages are producing growing disparities between the elite and other scientists both in performance and in rewards which create and maintain a sharply graded stratification system

From dream to discovery ,1964 The Whats of a Scientific Life John R. Helliwell, 2019-10-10 This book completes a scientific life trilogy of books following on from the Hows i e skills and the Whys is now the Whats of a scientific life Starting with just what is science then on to what is physics what is chemistry and what is biology the book discusses career situations in terms of types of obstacles faced There follow examples of what science has achieved as well as plans and opportunities The contexts for science are dependencies of science on mathematics how science cuts across disciplines and the importance of engineering and computer software What science is as a process is that it is distinctly successful in avoiding or dealing with failures Most recently a radical change in what is science is the merger of the International Council of Scientific Unions and the International Social Sciences Council Key Features Dissects what is science and its contexts Provides wide ranging case studies of science and discovery based directly on the author's many decades in science The author has outstanding experience in mentoring and career development and also in outreach activities for the public and students of all ages The world of science today involves a merger of the sciences and the social sciences Journal of Science ,1965 Scientific Elite William T. Golden, 2018-04-24 Scientific Elite is about Nobel prize winners and the well defined stratification system in twentieth century science It tracks the careers of all American laureates who won prizes from 1907 until 1972 examining the complex interplay of merit and privilege at each stage of their scientific lives and the creation of the ultra elite in science The study draws on biographical and bibliographical data on laureates who did their prize winning research in the United States and on detailed interviews with forty one of the fifty six laureates living in the United States at the time the study was done Zuckerman finds laureates being successively advantaged as time passes These advantages are producing growing disparities between the elite and other scientists both in performance and in rewards which create and maintain a sharply graded stratification system The Science of Consciousness Trevor A. Harley, 2021-02-18 Consciousness concerns awareness and how we experience the world How does awareness a feature of the mental world arise from the physical brain Is a dog conscious or a jellyfish and what explains the difference How is consciousness related to psychological processes such as perception and cognition The Science of Consciousness covers the psychology philosophy and neuroscience of consciousness Written for introductory courses in psychology and philosophy this text examines consciousness with a special emphasis on current neuroscience research as well as comparisons of normal and damaged brains The full range of normal and altered states of consciousness including sleep and dreams hypnotic and meditative states anesthesia and drug induced states as well as parapsychological phenomena and their importance for the science of consciousness is covered as well as the higher states and how we can attain them Throughout the text attempts to relate consciousness to the brain Teaching Science in Elementary and Middle School Cory A. Buxton, Eugene F. Provenzo, Jr., 2010-07-08 A practical methods text that prepares teachers to engage their students in rich science learning experiences Featuring an increased emphasis on the way today s changing science and technology is shaping our culture this Second

Edition of Teaching Science in Elementary and Middle School provides pre and in service teachers with an introduction to basic science concepts and methods of science instruction as well as practical strategies for the classroom Throughout the book the authors help readers learn to think like scientists and better understand the role of science in our day to day lives and in the history of Western culture Part II features 100 key experiments that demonstrate the connection between content knowledge and effective inquiry based pedagogy The Second Edition is updated throughout and includes new coverage of applying multiple intelligences to the teaching and learning of science creating safe spaces for scientific experimentation using today's rapidly changing online technologies and more Valuable Instructor and Student resources The password protected Instructor Teaching Site includes video clips that illustrate selected experiments PowerPoint lecture slides Electronic Test Bank Teaching guides and Web resources The open access Student Study Site includes tools to help students prepare for exams and succeed in the course video clips that illustrate selected experiments chapter summaries flash cards quizzes helpful student quides links to state standards licensure exams and PRAXIS resources and Learning from SAGE Scientific American ,1928 Monthly magazine devoted to topics of general scientific interest **Journal Articles** The Saturday Review of Politics, Literature, Science and Art ,1879 The Popular Science Monthly ,1879 An Introduction **to Evidence Science** Baosheng Zhang, 2025-04-02 The book discusses the subject and scope of evidence science and puts forward the new epistemological formula of practice evidence knowledge evidence practice which applies to the problem of evidence reasoning and knowledge acquisition that exist in different disciplines Also it demonstrates the history of evidence science and reveal the formation development and maturing process of the traditional evidence theory as well as the ideological origin and characteristics clarifies the probabilistic path of judicial proof by probability theory of evidence It introduces the theory of evidential reasoning discusses the concept nature and function the evidential reasoning through chart method narrative method the mixed methods and argumentation and story It puts forward the basic principle in seeking for the truth through evidence based decision making The game theory rules and models are introduced as well as the influencing factors of evidence based decision making such as fact evidence law and claims It discusses the issues of evidential evaluation in both the general context and legal context taking the decision making activities as the frame of reference discusses the trend of interdisciplinary development of narratology and the resulting narrative turn in evidence science through reviewing general theory of narratology The book introduces the theory of evidential explanation It analyses the relationships among fact evidence and explanation from the perspective of hermeneutics and theory of scientific evidence discuss the effects of scientific evidence in judicial fact finding This book is the research results of the Evidence Science Theory System and Applied Research project which established in 2006 and after 13 years has taken a significant first step in the field of a broadly defined evidence science on the basis of a less expansive research endeavor aimed at integrating evidence law and forensic science From Science to Emancipation Roy Bhaskar, 2013-06-17 From Science to Emancipation

Alienation and the Actuality of Enlightenment is the second of three books elaborating Roy Bhaskar's new philosophy of metaReality which appeared in rapid succession in 2002 With a new introduction from Mervyn Hartwig this book contains some of the original transcripts and the questions and answers they provoked from a variety of lecture and workshop tours Roy Bhaskar presented for Indian audiences before this book was first published Because of the spontaneous and informal nature of these talks and discussions this book continues to provide the most immediate and accessible introduction to Roy Bhaskar's philosophy as it charts his intellectual journey The talks recorded here have retained an immediate local but also deeply universal interest From Science to Emancipation provides an indispensible resource for all students of philosophy and the human sciences

Francis Bacon: From Magic to Science Paolo Rossi, 2013-04-15 Originally published in 1968 This volume discusses Francis Bacon's thought and work in the context of the European cultural environment that influenced Bacon's philosophy and was in turn influenced by it It examines the influence of magical and alchemical traditions on Bacon and his opposition to these traditions as well as illustrating the naturalist materialist and ethico political patterns in Bacon's allegorical interpretations of fables
