**From DNA Photolesions to Mutations, Skin Cancer and Cell Death** Evelyne Sage, Regen Drouin, Mahmoud Rouabhia, 2007-10-31 As modern day society takes an increasing interest in outdoor activities its exposure to sunlight has never been greater As a consequence countries throughout the world are experiencing a dramatic increase in the incidences of skin carcinomas and melanomas From DNA photolesions to mutations skin cancer and cell death provides an authoritative source of information for photobiologists interested in the series of genetic events that occur in the skin and eventually lead to cancer With contributions from eminent scientists in the field this book includes the latest information on DNA photolesions and repair as well as the key mechanisms of solar UV in skin cancer initiation and development Significant information relating to UV induced photolesions and mechanisms of skin tumour occurrence is also included By providing the basic phenomena underlying the science and an overview of the biological events that take place when cells are exposed to solar UV radiation From DNA photolesions to mutations skin cancer and cell death is suitable to all researchers interested in the process of photocarcinogenesis *Photodynamic Medicine* Herwig Kostron, Tayyaba Hasan, 2016 Comprehensive Series in Photochemical and Photobiological Sciences Photodynamic therapy PDT is increasingly being used amongst health practitioners in combating a variety of disease This book reviews the current state of development of PDT and also presents the foreseeable advancements of the field in the next decade Practitioners in biological sciences biotechnology and medicinal and pharmaceutical chemistry will find this book an invaluable source of information Chapters are drawn from research discusses at the 10th International Symposium on Photodynamic Therapy and Photodiagnosis in Clinical Practice in Brixen and are written and edited by leaders in the field Mirroring the philosophy of that meeting this book contains an informative balance of the basic sciences and clinical applications of PDT Following an introduction to PDT its history and how techniques have developed chapter serve as a practical guide for practitioners covering topics such as sensitizer dosage and light dosage and examples of relevant studies The text goes further to explore areas outside the medical field such as the impact of PDT on society and the environment and the economics of therapies This book is dedicated to the memory of Professor Giulio Jori and expert in this field who sadly passed away on the 23rd December 2014 **Surface Water Photochemistry** Paola Calza, Davide Vione, 2015-11-20 Borne out of the current widespread interest in the pollution of water bodies this book explores the latest research concerning the photochemical fate of organic pollutants in surface water Considering both the functioning of ecosystems and the behaviour of emerging pollutants in those ecosystems it is dedicated to techniques that can be used in the field and in the laboratory for the detection of pollutants and of their transformation intermediates The inclusion of photochemical processes that have not gained previous coverage will afford the reader novel insights whilst the focus on modelling and transformation intermediates will ensure the title s relevance to academics the chemical manufacturing industries and environmental assessment experts alike **Photodynamic Inactivation of**

**Microbial Pathogens** Michael R Hamblin, Giulio Jori, 2015-11-09 Photodynamic therapy PDT was discovered over one hundred years ago after observing the death of microorganisms upon exposure to dyes and light It is the combination of non toxic dyes and harmless visible light that in the presence of oxygen produce highly toxic reactive species The principal medical application during the last century was in cancer therapy but in these days of rising antibiotic resistance PDT shows increasing promise as an alternative approach to treating infections PDT has also been used in blood product sterilization periodontology acne reduction and the treatment of viral lesions such as those caused by human papilloma virus It may also have potential as an environmentally friendly pesticide This is the first and only book to comprehensively cover the use of light and photosensitising agents for controlling microbial pathogens It provides a comprehensive and up to date coverage of an emerging field There are several chapters on the design of antimicrobial photosensitizers their use to kill pathogenic organisms and their success in treating infections in animal models It has long been known that gram positive bacteria are highly susceptible to photoinactivation but the book also discusses means of widening the range of microorganisms that can be tackled by PDT Edited by two pioneers in the application of PDT to medical and environmental issues this book covers the basic science translational research in animals and the clinical applications in various medical specialities It represents an indispensable resource for microbiologists and infectious disease doctors as well as dentists dermatologists gastroenterologists and transfusion specialists

**Light in Forensic Science** Mire Zloh, Jacqueline L Stair, Giorgia Miolo, 2018-04-18 The identification and quantification of material present and collected at a crime scene are critical requirements in investigative analyses Forensic analysts use a variety of tools and techniques to achieve this many of which use light Light is not always the forensic analyst s friend however as light can degrade samples and alter results This book details the analysis of a range of molecular systems by light based techniques relevant to forensic science as well as the negative effects of light in the degradation of forensic evidence such as the breakage of DNA linkages during DNA profiling The introductory chapters explain how chemiluminescence and fluorescence can be used to visualise samples and the advantages and limitations of available technologies They also discuss the limitations of our knowledge about how light could alter the physical nature of materials for example by breaking DNA linkages during DNA profiling or by modifying molecular structures of polymers and illicit drugs The book then explains how to detect analyse and interpret evidence from materials such as illicit drugs agents of bioterrorism and textiles using light based techniques from microscopy to surface enhanced Raman spectroscopy Edited by active photobiological and forensic scientists this book will be of interest to students and researchers in the fields of photochemistry photobiology toxicology and forensic science

**DNA Photodamage** Roberto Improta,Thierry Douki,2021-12-06 Induction of DNA damage by sunlight is a major deleterious event in living organisms Recent developments have dramatically improved our understanding of the photochemical processes involved at the sub picosecond time scale and along with next generation sequencing and data processing has generated a need for a complete up to date coverage of the field Written in an accessible and comprehensive manner DNA Photodamage will appeal to all scientists working in the area whether specialists in the discipline or not and provides a complete coverage of the field from ultrafast spectroscopy to biomedical research Bridging the gap between photophysical and photochemical research on model systems and in vivo and in vitro biological studies this book aims to identify the most important research trends in the field and review their major findings

**Radiation-induced and oxidative DNA damages** Antonio Monari,Elise Dumont,Chrysostomos Chatgililoglu,2015-10-02 DNA stores and passes the genetic information of almost all living organisms Its molecular structure and their intramolecular interactions are particularly suitable to maximize stability against oxidative stress and UV light absorption Yet the protection and repair strategies are still error prone DNA lesions are produced including the most complex and highly mutagenic ones An important threat to DNA stability comes from photosensitization i e from the dramatic multiplication of radiation induced defects mediated by the presence of organic or organometallic dyes compared to the direct exposure to UVA radiation Moreover the photo induced production of singlet oxygen generates an extremely high oxidative stress on DNA that in vivo normally results in extended cellular apoptosis Elucidating the processes leading to DNA damages from the production of a simple radical entity to deleterious lesions as well as the opportunities of repair by devoted enzymes is a cornerstone towards the development of more efficient protection strategies Sensitization and selective production of DNA lesions can also be exploited to induce the selective apoptosis of cancer cells upon exposition to radiation or to oxidative stress for instance in the field of photodynamic therapy The importance and relevance of the field is witnessed by the impressive amount of high level papers dealing with this complex subject and notably tackling the structural elucidation of DNA and DNA drug adducts the mechanisms of formation of DNA lesions including the precise detection of the final lesion products as well as the influence of the lesions on the DNA stability and dynamics and the consequences on the ease of repair Due to the complexity of the field lying at the frontiers between chemistry physics and biology multidisciplinary strategies allying modeling and experience are needed This topic aims at giving an extended overview of the current research in the domain with fundamental contribution from the leading groups in the field of DNA reactivity structural characterization photo chemistry and photo physics as well as repair mechanism It will therefore be a fundamental guide for scientists wanting to address the field of DNA lesion and repair but also more generally for researchers working in rational drug design or in the development of biomarkers and medical imaging techniques
