From Individual Behaviour To Population Ecology:

From Individual Behaviour to Population Ecology William J. Sutherland, 1996 Population dynamics and animal behavior are two subjects which have developed almost independently despite widespread acceptance of the idea that they must be related This book provides a novel framework for combining these two subjects and considers a range of conservation issues The author suggests how to extrapolate from behavioral interactions to population level phenomena each chapter presents a combination of theory and empirical examples including modelling techniques Students and researchers in animal behavior population ecology and conservation biology will welcome this new approach *From Individual Behaviour to Population Ecology* William J. Sutherland, 1996 Population dynamics and animal behaviour are two subjects which have developed almost independently despite widespread acceptance of their interrelationship This study aims to provide a framework for combining both fields of research It also considers a range of conservation issues

Aboveground-Belowground Linkages Richard D. Bardgett, David A. Wardle, 2010-07-29 Aboveground Belowground Linkages provides the most up to date and comprehensive synthesis of recent advances in our understanding of the roles that interactions between aboveground and belowground communities play in regulating the structure and function of terrestrial ecosystems and their responses to global change It charts the historical development of this field of ecology and evaluates what can be learned from the recent proliferation of studies on the ecological and biogeochemical significance of aboveground belowground linkages The book is structured around four key topics biotic interactions in the soil plant community effects the role of aboveground consumers and the influence of species gains and losses A concluding chapter draws together this information and identifies a number of cross cutting themes including consideration of aboveground belowground feedbacks that occur at different spatial and temporal scales the consequences of these feedbacks for ecosystem processes and how aboveground belowground interactions link to human induced global change Ecological Speciation Patrik Nosil, 2012-03-15 It then reviews the three components of ecological speciation and discusses the geography and genomic basis of the process **The Role of Chromosomal Change in Plant Evolution** Donald A.

Levin, 2002 Genome heterozygosity polyploidy phenotype genes euploid aneuploid *Living in Groups* Jens Krause, Graeme D. Ruxton, 2002-10-10 Shoals swarms flocks herds group formation is a widespread phenomenon in animal populations It raises several interesting questions for behavioral ecologists Why do animals form and live in groups and what factors influence the ways in which they do this What are the costs and benefits to an animal of group living How are these influenced by ecological factors The authors familiarize the reader with cutting edge ideas on the ecology and evolution of group living animals and detail fascinating case studies demonstrating them in action **The Physics of Foraging** Gandhimohan. M. Viswanathan, Marcos G. E. da Luz, Ernesto P. Raposo, H. Eugene Stanley, 2011-06-02 Do the movements of animals including humans follow patterns that can be described quantitatively by simple laws of motion If so then why These

questions have attracted the attention of scientists in many disciplines and stimulated debates ranging from ecological matters to queries such as how can there be free will if one follows a law of motion This is the first book on this rapidly evolving subject introducing random searches and foraging in a way that can be understood by readers without a previous background on the subject It reviews theory as well as experiment addresses open problems and perspectives and discusses applications ranging from the colonization of Madagascar by Austronesians to the diffusion of genetically modified crops The book will interest physicists working in the field of anomalous diffusion and movement ecology as well as ecologists already familiar with the concepts and methods of statistical physics

Acarid Phylogeny and Evolution: Adaptation in Mites and Ticks Fabio Bernini, Roberto Nannelli, Giorgio Nuzzaci, Enrico de Lillo, 2013-03-09 The words pronounced by Serge Kreiter during the meeting come to mind They could record exactly the situation of Acarology in Europe and in the World I think that in many European countries there are very few full time acarologists It is very rare to have new positions available And public money from the European Community but also from national countries is very hard to get when you want to work on mites Could two acarological associations in Europe Eur A Ac and S I A L F work together or better get married So the fourth symposium of the European Acarologists has not only been the occasion to have an idea on which direction the research is addressed today but also it pointed out the difficulties of our scientific branch On the basis of the presentations and invited papers we had evidences of a new Acarology based on modern techniques and methods of investigations but also the importance often sheltered even if of relevant value of the old Acarology made on the alpha taxonomy and basic studies So a new Acarology needs the old one In this context the hope to put together the European acarologists has been coming up This fact of political meaning can surely improve the acarological movement and the discussion on this point showed clearly the importance of several other activities and efforts in this direction We hope that the meeting in Siena will represent a significative stone for the progress of Acarology

Insect Populations In theory and in practice Jack P. Dempster, Ian F.G. McLean, 2012-12-06 Insects are by far the largest group of animals on Earth with over a million described species and they occupy a wide range of ecological niches they may be herbivores predators parasites or decomposers Some are of particular economic importance as pests of agriculture and forestry as vectors of animal and human disease or as species of interest to wildlife conservation Thus an understanding of the processes determining their numbers is of considerable practical value Entomologists have played a leading role in developing a theoretical basis to Population Ecology but we still do not have adequate experimental and observational proof for many of the theoretical ideas that have been proposed As a result the subject has been beset with arguments for more than 50 years This volume attempts to reconcile some of these controversies while also reviewing the current state of our knowledge The editors have drawn together an international list of contributors whose views reflect a range of opinions on how natural populations are stabilised They have succeeded in producing a book that both covers the main alternative views in population theory and contains some of the best recent field studies of insect

populations This Royal Entomological Society Symposium volume will be of great interest to all entomologists and ecologists particularly those who wish to know more about Population Dynamics **Birds and Habitat** Robert J. Fuller, 2012-11-08 The successful conservation of bird species relies upon our understanding of their habitat use and requirements In the coming decades the importance of such knowledge will only grow as climate change the development of new energy sources and the needs of a growing human population intensify the already significant pressure on the habitats that birds depend on Drawing on valuable recent advances in our understanding of bird habitat relationships this book provides the first major review of avian habitat selection in over twenty years It offers a synthesis of concepts patterns and issues that will interest students researchers and conservation practitioners Spatial scales ranging from landscape to habitat patch are covered and examples of responses to habitat change are examined European landscapes are the main focus but the book has far wider significance to similar habitats worldwide with examples and relevant material also drawn from North America and Australia **Gorilla Society** Alexander H. Harcourt, Kelly J. Stewart, 2008-09-15 Societies develop as a result of the interactions of individuals as they compete and cooperate with one another in the evolutionary struggle to survive and reproduce successfully Gorilla society is arranged according to these different and sometimes conflicting evolutionary goals of the sexes In seeking to understand why gorilla society exists as it does Alexander H Harcourt and Kelly J Stewart bring together extensive data on wild gorillas collected over decades by numerous researchers working in diverse habitats across Africa to illustrate how the social system of gorillas has evolved and endured Gorilla Society introduces recent theories explaining primate societies describes gorilla life history ecology and social systems and explores both sexes evolutionary strategies of survival and reproduction With a focus on the future Harcourt and Stewart conclude with suggestions for future research and conservation An exemplary work of socioecology from two of the world's best known gorilla biologists Gorilla Society will be a landmark study on a par with the work of George Schaller a synthesis of existing research on these remarkable animals and the societies in which they live **The Behaviour of Teleost Fishes** Tony J. Pitcher, 2012-12-06 This book is about the behaviour of teleosts a well defined highly successful taxonomic group of vertebrate animals sharing a common body plan and forming the vast majority of living bony fishes There are well over 22000 living species of teleosts including nearly all those of importance in commercial fisheries and aquaculture Teleosts are represented in just about every conceivable aquatic environment from temporary desert pools to the deep ocean from soda lakes to sub zero Antarctic waters Behaviour is the primary interface between these effective survival machines and their environment behavioural plasticity is one of the keys to their success The study of animal behaviour has undergone revolutionary changes in the past decade under the dual impact of behavioural ecology and sociobiology The modern body of theory provides quantitatively testable and experimentally accessible hypotheses Much current work in animal behaviour has concentrated on birds and mammals animals with ostensibly more complex structure physiology and behavioural capacity but there is a growing body of information about the

behaviour of fishes There is now increasing awareness that the same ecological and evolutionary rules govern teleost fish and that their behaviour is not just a simplified version of that seen in birds and mammals The details of fish behaviour intimately reflect unique and efficient adaptations to their three dimensional aquatic environment *The Goshawk* Robert Kenward,2010-01-30 A large and spectacular bird of prey the Goshawk lives in boreal forests throughout the Northern hemisphere The Goshawk is an authoritative yet highly readable monograph of the species A powerful hunter of large birds and woodland mammals it was persecuted for many years by game keepers to the point of extinction in the UK However escaped falconry birds led to the establishment of a new population in the 1960s though the species remains rare and elusive birders need a combination of hard work and a little luck to see this magnificent raptor The Goshawk includes chapters on nomenclature races and morphs biometrics nesting incubation and chick rearing migration feeding ecology population dynamics and conservation punctuated throughout with illuminating tales from author Robert Kenward s extensive field research The book is packed with illustrations figures and maps and contains a selection of the author s superb photographs of the birds The product of almost 30 years work this title is a classic Poyser monograph birders will enjoy the fascinating insights into the biology of the bird while academics will appreciate the book s comprehensive literature review *Aquatic Telemetry* Eva B. Thorstad,Ian A. Fleming,Tor Fredrik Naesje,2013-03-09 This volume provides a selection of the most significant papers presented at the Fourth Conference on Fish Telemetry in Europe in Trondheim Norway in 2001 Papers are focused on migratory patterns and habitat utilisation social behaviour physiological ecology fisheries management effects of human impact on fish populations aquaculture and methodology and new technology This book is aimed at scientists and engineers actively involved in aquatic telemetry projects aquatic biologists marine and freshwater fisheries biologists and managers **Ecotoxicology Modeling** James Devillers,2009-08-07 Ecotoxicology Modeling is a comprehensive and well documented text providing a collection of computational methods to the ecotoxicologists primarily interested in the study of the adverse effects of chemicals their mechanisms of action and or their environmental fate and behavior Avoiding mathematical jargon the book presents numerous case studies to enable the reader to understand the interest but also the limitations of linear and nonlinear models in ecotoxicology Written by an international team of scientists Ecotoxicology Modeling is of primary interest to those whose research or professional activity is directly concerned with the development and application of models in ecotoxicology It is also intended to provide the graduate and post graduate students with a clear and accessible text covering the main types of modeling approaches used in environmental sciences **Conservation of Exploited Species** John D. Reynolds,2001-10-18 The use of wildlife for food and other human needs poses one of the greatest threats to the conservation of biodiversity Wildlife exploitation is also critically important to many people from a variety of cultures for subsistence and commerce This book brings together international experts to examine interactions between the biology of wildlife and the divergent goals of people involved in hunting fishing gathering and culling wildlife

Reviews of theory show how sustainable exploitation is tied to the study of population dynamics with direct links to reproductive rates life histories behaviour and ecology As such theory is rarely put into practice to achieve sustainable use and effective conservation Conservation of Exploited Species explores the many reasons for this failure and considers remedies to tackle them including scientific issues such as how to incorporate uncertainty into estimations as well as social and political problems that stem from conflicting goals in exploitation

The Biology of Blennies Robert A

Patzner,2009-01-05 Blennies are diverse group of bony fishes found around the globe Most blennies are small and somewhat difficult to identify so until recently these fish did not occupy the interests of many ichthyologists and even fewer ecologists With nearly 900 species blennies are important members of most coastal marine communities This book should stimula

Aquatic Food Webs Andrea Belgrano,Ursula M. Scharler,Jennifer Dunne,Robert E. Ulanowicz,2005-04-07 This volume provides a current synthesis of theoretical and empirical food web research Whether they are binary systems or weighted networks food webs are of particular interest to ecologists in providing a macroscopic view of ecosystems They describe interactions between species and their environment and subsequent advances in the understanding of their structure function and dynamics are of vital importance to ecosystem management and conservation Aquatic Food Webs provides a synthesis of the current issues in food web theory and its applications covering issues of structure function scaling complexity and stability in the contexts of conservation fisheries and climate Although the focus of this volume is upon aquatic food webs where many of the recent advances have been made any ecologist with an interest in food web theory and its applications will find the issues addressed in this book of value and use This advanced textbook is suitable for graduate level students as well as professional researchers in community ecosystem and theoretical ecology in aquatic ecology and in conservation biology

Biology of Australian Butterflies R. L. Kitching,1999 Brings together exciting accounts of life history strategies of a range of species as well as background information on general butterfly behaviour taxonomy and evolutionary aspects

Pattern and Process in Cultural Evolution Stephen Shennan,2009-03-31 This volume offers an integrative approach to the application of evolutionary theory in studies of cultural transmission and social evolution and reveals the enormous range of ways in which Darwinian ideas can lead to productive empirical research the touchstone of any worthwhile theoretical perspective While many recent works on cultural evolution adopt a specific theoretical framework such as dual inheritance theory or human behavioral ecology Pattern and Process in Cultural Evolution emphasizes empirical analysis and includes authors who employ a range of backgrounds and methods to address aspects of culture from an evolutionary perspective Editor Stephen Shennan has assembled archaeologists evolutionary theorists and ethnographers whose essays cover a broad range of time periods localities cultural groups and artifacts
