Almost Global Solutions of Capillary-Gravity Water Waves Equations on the Circle Massimiliano Berti, Jean-Marc Delort, 2018-11-02 The goal of this monograph is to prove that any solution of the Cauchy problem for the capillary gravity water waves equations in one space dimension with periodic even in space small and smooth enough initial data is almost globally defined in time on Sobolev spaces provided the gravity capillarity parameters are taken outside an exceptional subset of zero measure In contrast to the many results known for these equations on the real line with decaying Cauchy data one cannot make use of dispersive properties of the linear flow Instead a normal forms based procedure is used eliminating those contributions to the Sobolev energy that are of lower degree of homogeneity in the solution Since the water waves equations form a quasi linear system the usual normal forms approaches would face the well known problem of losses of derivatives in the unbounded transformations To overcome this after a parilinearization of the capillary gravity water waves equations we perform several paradifferential reductions to obtain a diagonal system with constant coefficient symbols up to smoothing remainders Then we start with a normal form procedure where the small divisors are compensated by the previous paradifferential regularization The reversible structure of the water waves

equations and the fact that we seek solutions even in space guarantees a key cancellation which prevents the growth of the Sobolev norms of the solutions

Conformal and Harmonic Measures on Laminations Associated with Rational Maps Vadim A. Kaimanovich, Mikhail Lyubich, 2005 This book is dedicated to Dennis Sullivan on the occasion of his 60th birthday The framework of affine and hyperbolic laminations provides a unifying foundation for many aspects of conformal dynamics and hyperbolic geometry The central objects of this approach are an affine Riemann surface lamination \mathcal{A} and the associated hyperbolic 3 lamination \mathcal{H} endowed with an action of a discrete group of isomorphisms This action is properly discontinuous on \mathcal{H} which allows one to pass to the quotient hyperbolic lamination \mathcal{M} Our work explores natural geometric measures on these laminations We begin with a brief self contained introduction to the measure theory on laminations by discussing the relationship between leafwise transverse and global measures The central themes of our study are leafwise and transverse conformal streams on an affine lamination \mathcal{A} analogues of the Patterson Sullivan conformal measures for Kleinian groups harmonic and invariant measures on the corresponding hyperbolic lamination \mathcal{H} the Anosov Sinai cocycle the corresponding basic cohomology class on \mathcal{A} which provides an obstruction to flatness and the Busemann cocycle on \mathcal{H} A number of related geometric objects on laminations in particular the backward and forward Poincare series and the associated critical exponents the curvature forms and the Euler class currents and transverse invariant measures λ harmonic functions and the leafwise Brownian motion are discussed along the lines The main examples are provided by the laminations arising from the Kleinian and the rational dynamics In the former case \mathcal{M} is a sublamination of the unit tangent bundle of a hyperbolic 3 manifold its transversals can be identified with the limit set of the Kleinian group and we show how the classical theory of Patterson Sullivan measures can be recast in terms of our general approach In the latter case the laminations were recently constructed by Lyubich and Minsky in LM97 Assuming that they are locally compact we construct a transverse δ conformal stream on \mathcal{A} and the corresponding λ harmonic measure on \mathcal{M} where $\lambda \delta \delta \geq 2$ We prove that the exponent δ of the stream does not exceed 2 and that the affine laminations are never flat except for several explicit special cases rational functions with parabolic Thurston orbifold

Christos Flytzanis, Jean L. Oudar, 2012-12-06 The field of nonlinear optics has witnessed a tremendous evolution since its beginnings in the early sixties. Its frontiers have been extended in many directions and its techniques have intruded upon many areas of both fundamental and practical interest. The field itself has been enriched with many new phenomena and concepts that have further extended its scope and strengthened its connection with other areas. As a consequence it is becoming increasingly unrealistic to expect to cover the different facets and trends of this field in the lectures or proceedings of a summer school; however, advanced these may be. However, much of the current progress and interest in this field springs to a large extent from the promise and expectation that highly performing all-optical devices that exploit and operate on the principles of nonlinear optics will constitute an important branch of future technology and will provide new alternatives in information processing and transmission. The conception of new devices in general requires an intricate and bold combination of facts and methods from most diverse fields in order to perform functions and operations that fit into an overall technological ensemble.

Wandering in the World of Smarandache Numbers A. A. K. Majumdar, 2010 This book covers only a part of the wide and diverse field of the Smarandache Notions and contains some of the materials that I gathered as I wandered in the world of Smarandache. Most of the materials are already published in different journals but some materials are new and appear for the first time in this book. All the results are provided with proofs. Chapter 1 gives eleven recursive type Smarandache sequences namely the Smarandache Odd Even Prime Product Square Product of two types Higher Power Product of two types Permutation Circular Reverse Symmetric and Pierced Chain sequences. Chapter 2 deals with the Smarandache Cyclic Arithmetic Determinant and Bisymmetric Arithmetic Determinant sequences and series involving the terms of the Smarandache bisymmetric determinant natural and bisymmetric arithmetic determinant sequences. Chapter 3 treats the Smarandache function S_n . Chapter 4 considers in rather more detail the pseudo Smarandache function Z_n . And the Smarandache S related and Z related triangles are the subject matter of Chapter 5. To make the book self-contained some well known results of the classical Number Theory are given in Chapter 0. In order to make the book up to date the major results of other researchers are also included in the book. At the end of each chapter several open problems are given.
