**Policy Toward Network Industries** Lawrence J. White, 1999 This volume shows that the public policy concerns are not accidental because such industries often embody two major and widely recognized forms of potential market failure

Liberalizations in Network Industries Antonio Nicita, Filippo Belloc, 2016-09-15 This book explores the wave of liberalization reforms experienced by OECD network industries Focusing on the telecommunications sector the authors analyze the latest data available on liberalization and privatization and following a political economics approach they integrate standard economic analysis with the most recent studies of the political determinants of market oriented policies

The book presents new econometric evidence on several policy issues including institutional complementarities dynamics the problem of policy sequencing and the role of government political ideology The detailed and comprehensive discussion offers insights into how so many countries adopting similar reforms actually differ in their policy bundling intensity and implementation of liberalization and privatization EU Competition Law and the Information and Communication Technology Network Industries Andrej Fatur,2012-03-08 Competition policies have long been based on a scholarly tradition focused on static models and static analysis of industrial organisation However recent developments in industrial organisation literature have led to significant advances moving beyond traditional static models and a preoccupation with price competition to consider the organisation of industries in a dynamic context This is especially important in the field of information and communication technology ICT network industries where competition centres on network effects innovation and intellectual property rights and where the key driver of consumer benefit is technological progress Consequently when an antitrust intervention is contemplated a number of considerations that arise out of the specific nature of the ICT sector have to be taken into account to ensure improved consumer welfare This book considers the adequacy of existing EU competition policy in the area of the ICT industries in the light of the findings of modern economic theory Particular attention is given to the implications of these dynamic markets for the competitive assessment and treatment of the most common competitive harms in this area such as non price predatory practices tying and bundling co operative standard setting platform joint ventures and co operative R D **The Economics of Standardization in Network Industries** Michael L. Katz,1986 *The Routledge Companion to Network Industries* Matthias Finger,Christian Jaag,2015-11-19 In recent decades network industries around the world have gone through periods of de and re regulation With vast amounts of sometimes conflicting research carried out into specific network industries the time has come for a critical overarching assessment of this entire industry in order to provide a platform of understanding to aid future research and practice This comprehensive resource provides an orientation for academics policy makers and managers as to the main economic regulatory and commercial challenges in the network industries The book is split into sections covering market policy regulation management perspectives whilst all of the key network industries are covered including energy transport water and telecommunications Overseen by world class Editors and experts in the field this interdisciplinary resource is essential reading for students and researchers in international business industrial economics and the industries International Handbook of Network Industries Matthias Finger,R. W. Kneke,2011 To learn about how economic and institutional forces have shaped the network industries and policies towards them read the first part of the book To discover their impacts on particular industries read the second part And to find out what has happened in particular countries read the third part I think anyone interested in network industries should read all of it The book's structure allows for many interesting comparisons across countries and sectors Richard Green University of Birmingham UK This is a very useful and

comprehensive guide to reforms in network industries in communications energy transport and water It is organized by generic topic sector and region Its authors are acknowledged experts I am confident that this Handbook will be a widely read and valuable resource for many years Martin Cave London School of Economics UK Quite an accomplishment this Handbook provides by far the most comprehensive overview of the role of the private sector and competition in infrastructure industries with thoughtful surveys of each of the major infrastructure sectors and of the key regions and countries Jos G mez Ib ez Harvard University US In recent decades all infrastructures have undergone significant restructuring This worldwide phenomenon is often labelled liberalization and although expectations were high with respect to lower prices greater efficiency and innovation the expected gains have not always been fully realized This extensive state of the art Handbook provides a comprehensive overview of the various experiences of liberalization across different sectors regions and disciplines The multidisciplinary approach focuses on the economic political and institutional aspects of liberalization as well as to a lesser extent on technological issues As such it constitutes a unique contribution as this broad overview is often lost in the sector specific country focused and purely disciplinary approaches prevalent in the current literature Sectors explored include telecoms the Internet energy and transport whilst the truly global perspective incorporates unique case studies from an array of developed and developing countries including the US China India and the EU The International Handbook of Network Industries will become the definitive volume for academics researchers and students of economics political science and law interested in infrastructure regulation It will also prove a valuable guide to practitioners and policy makers involved in liberalization and competition

Welfens, George Yarrow, Ruslan Grinberg, Cornelius Graack, 2012-12-06 Competition in network industries faces particular problems which are analyzed from both a theoretical and policy perspective Issues of vertical integration deregulation and privatization are covered While competition and privatization are rapidly unfolding in telecommunications in Western and Eastern Europe energy and railway transportation represent sectors of more gradual liberalization The different market characteristics of telecommunications energy and transportation raise consistency problems in the fields of deregulation investment strategies and internationalization While transformation policies create opportunities for liberalization in Eastern Europe and Russia the latter shows critical problems in ending monopoly and state ownership Network industries could be subject to competition and promise major investment opportunities plus consumer benefits
