Health Intervention In Less Developed Nations:

Equity and Healthcare Reform in Developing Economies Songül Çınaroğlu, 2020-10-29 Ensuring equity in healthcare is the main concern of health policymakers in order to provide a sustainable health system. This concern is more prominent in developing countries due to the scarcity of resources. This book provides a comprehensive analysis and discussion on the distributive pattern of out-of-pocket pharmaceutical expenditures under the health reforms in Turkey and makes comparisons with pharmerging countries. Turkey's health reforms began in 2003 to address shortcomings related to financial protection and to improve health outcomes and the quality of healthcare services. The primary motivation was to ensure equity in the distribution of health resources and this transformation process led to profound changes in how these resources were used and in health financing in general. However, there is a lack of knowledge regarding the long-term effect of health reforms on the distribution patterns of health expenditures and health service use. This book offers a thorough equity analysis of the health financing system affected by this health transformation program. Index and curve approaches are used in the equity analysis of pharmaceutical expenditures. The book examines the long-term effects of health system regulations on the health spending characteristics of households and improves the current understanding of equity in this context. It includes extensive international comparisons of healthcare services across a range of developing countries and highlights the significance of ensuring equity for emerging economies. The author explores the existing evidence as well as future research directions and provides policy and planning advice for health policymakers to contribute to establishing a more equal health system design. Additionally, the book will be of interest to scholars and professionals in the fields of health economics, public health, management, and health financing.

The Challenge of Improving Water and Sanitation Services in Less Developed Countries Dale Whittington, W. Michael Hanemann, Claudia Sadoff, Marc Jeuland, 2009 The Challenge of Improving Water and Sanitation Services in Less Developed Countries shows the key to successful water and sanitation investments is to discover forms of service and payment mechanisms that will render the improvements worthwhile for those who must pay for them. However, for any investment, the outcome is likely to be context-dependent; the outcome depends on economic and social conditions, including how it is implemented by whom and to what extent complementary changes in behavior in institutions and sometimes in economic organization also occur. The Challenge of Improving Water and Sanitation Services in Less Developed Countries is organized in three parts. Part I focuses on conventional network technologies for water supply and sanitation. Part II presents the probabilistic analytical approach that we use to analyze investments in the water and sanitation sector. In Part III, we deploy this analytical framework to examine the costs and benefits of three specific low-cost non-network water and sanitation interventions: deep boreholes with public handpumps, total community-led sanitation campaigns, and biosand filters, and one high-cost intervention: large multipurpose dams in Africa.

Information Technologies and Economic Development in Latin America Alberto Chong, Mónica Yáñez-Pagans, 2020-02-29 Information

Technologies and Economic Development in Latin America provides a collection of rigorous empirical studies that contributes to a better understanding of the role and impact of old and new information technologies on Latin American economic development. It provides evidence using randomized and quasi experimental designed studies for different information and communication technologies interventions. In evaluating their development impact a critical concern has been to contribute to the little existing evidence. In fact whereas many ICT projects in the developing world have been promoted by multilateral organizations bilateral aid agencies and nongovernmental organizations in recent years the extent to which these interventions and policies actually contribute to the development of the region is unclear. The book provides evidence on what works and what does not.

Methods and Applications in Implementation Science Mary E. Northridge, Donna Shelley, Thomas G. Rundall, Ross C. Brownson, 2019-10-15 The purpose of this Research Topic is to share the latest developments in the methods and application of implementation science. Briefly implementation science is the study of methods to promote the adoption and integration of evidence based practices interventions and policies into routine health care and public health settings. Implementation research plays an important role in identifying barriers to and enablers of effective health systems programming and policymaking and then leveraging that knowledge to implement evidence based innovations into effective delivery approaches.

Household Reusable Rainwater Technology for Developing and Under-Developed Countries

Chukwuemeka Kingsley John, Jaan H. Pu, 2023-10-04 Household Reusable Rainwater Technology for Developing and Under Developed Countries provides insight into household techniques for collecting and treating harvested rainwater safely for both potable and nonpotable uses as well as practices to improve its quality with numerous realworld case studies and data. It gives a comprehensive holistic account on the household scale for both developing and under developed countries. Improvement mechanisms such as the impacts of first flush household water treatment techniques and sedimentation in the harvested water are described in depth together with the advantages and disadvantages of their common practices in developing and under developed societies. Also discussed is a comprehensive survey illustrating the impact of rainwater sources on the daily life of a carefully selected community from the perspective of its residents. The book is ideal for students researchers academics water policy providers and bodies worldwide such as WHO and DFID.
