Mooney, 1997-12-01 This body of work represents the first volume of a book series covering the field of tissue engineering Tissue engineering which refers to a category of therapeutic or diagnostic products and processes which are based upon a combination of living cells and biomaterials was defined as a field only a few years ago 1988 Tissue engineering is an inherently interdisciplinary field combining bioengineering life sciences and clinical sciences The definition of this area of work as the field of tissue engineering brought together scientists from multiple backgrounds who already were working toward the achievement of similar goals Why a book series exclusively devoted to tissue engineering The field of tissue engineering is heterogeneous The cells involved in tissue engineering can be autologous allogeneic or xenogeneic The biomaterials utilized can be either naturally occurring synthetic or a combination of both The application of the technology can be either for acute or permanent purposes An attempt to cover the field of tissue engineering in a single volume with the degree of detail necessary for individuals with different scientific backgrounds and disciplines would be a difficult task to accomplish particularly when this field is just emerging and changing rapidly Therefore addressing different technologies within the field of tissue engineering in a comprehensive manner is the main mission of this series of volumes A stellar group of scientists has been brought together to form the editorial board of the series Challenging Concepts in Cardiovascular Medicine Aung Myat, Shouvik Haldar, Simon Redwood, 2011-09-08 A comprehensive guide to the assessment diagnosis investigation and management of complex clinical scenarios in cardiovascular medicine This book contains a series of challenging concepts in cardiovascular medicine covering all subspecialty areas including general cardiology intervention cardiac imaging electrophysiology heart failure and cardiomyopathies cardiac devices transplant medicine epidemiology heart disease in pregnancy and congenital heart disease Each case provides an in depth review of current practice the application of national and international guidelines and a summary of evidence from the medical literature Data sets investigation results and cardiac imaging give the reader a real life sense of being in the outpatient clinic emergency room coronary care unit or cardiac catheterisation laboratory Each case is punctuated by Clinical Tips Learning Points and Landmark Trial Summaries to enhance the learning process alongside an Expert Commentary written by internationally renowned leaders in the field of cardiology **Current Catalog** , 1988 First
