

composed of 25.4 mm thick fiber insulating board, where the inside temperature is 352.7 K and the outside temperature is 297.1.

From the problem, we know that

Δx = thick of insulate = 25.4 mm = 0.0254 m

T_i = inside temperature = 352.7 K

T_o = outside temperature = 297.1 K

And $q/A = \dots\dots(W/m^2)$?

Answer:

$$\frac{q}{A} = -k \frac{(T_o - T_i)}{\Delta x}$$

An Introduction to Heat Transfer Principles and Calculations is an introductory text to the principles and calculations of heat transfer. The theory underlying heat transfer is described and the principal results and formulae are presented. Available techniques for obtaining rapid approximate solutions to complicated problems are also considered. This book is comprised of 12 chapters and begins with a brief account of some of the concepts, methods, nomenclature and other relevant information about heat transfer. The reader is then introduced to radiation, conduction, convection and boiling and condensation. Problems involving more than one mode of heat transfer are presented. Some of the factors influencing the selection of heat exchangers are also discussed. The remaining chapters focus on mass transfer and its simultaneous occurrence with heat transfer, the air-water vapor system with emphasis on humidity and enthalpy as well as wet bulb temperature, adiabatic saturation, temperature cooling by evaporation, drying and condensation, and physical properties and other information that must be taken into account before any generalized formula for heat or mass transfer can be applied to a specific problem. This monograph will be of value to mechanical engineers, physicists and mathematicians.

Engineering Calculations in Radiative Heat Transfer W. A. Gray, R. Müller, 2013-10-22

Engineering Calculations in Radiative Heat Transfer is a six chapter book that first explains the basic principles of thermal radiation and direct radiative transfer. Total exchange of radiation within an enclosure containing an absorbing or non absorbing medium is then described. Subsequent chapters detail the radiative heat transfer applications and measurement of radiation and temperature.

Finite Difference Methods in Heat Transfer Necati Ozisik, 1994-04-25

Finite Difference Methods in Heat Transfer presents a clear step by step delineation of finite difference methods for solving engineering problems governed by ordinary and partial differential equations with emphasis on heat transfer applications. The finite difference techniques presented apply to the numerical solution of problems governed by similar differential equations encountered in many other fields. Fundamental concepts are introduced in an easy to follow manner. Representative examples illustrate the application of a variety of powerful and widely used finite difference techniques. The physical situations considered include the steady state and transient heat conduction, phase change involving melting and solidification, steady and transient forced convection inside ducts, free convection over a flat plate, hyperbolic heat conduction, nonlinear diffusion, numerical grid generation techniques and hybrid numerical analytic solutions.
