

Heat wave

- Heat waves are prolonged periods of excessively hot weather, often accompanied by high humidity
- They can lead to significant health risks like heatstroke and dehydration
- Heat waves are becoming more frequent and intense due to global warming
- Understanding and preparing for them can help mitigate their impact on human health and safety

Practical example: Aerospace

- Heat waves, soaring temperatures caused by atmospheric conditions, significantly affect aerospace operations
- High heat can alter air density, reducing lift under aircraft wings and impacting engine performance
- This requires longer runways for safe takeoffs and careful altitude and speed adjustments during flight
- Cooling systems in both plane cabins and electronics must work harder, increasing maintenance needs and operational costs

Corporation of America In 1930 Farnsworth was awarded the fundamental patents for modern television but he had to spend the next decade fighting off challenges to his patents by the giant Radio Corporation of America and defending his vision against his own shortsighted investors who did not share his larger dream of scientific independence The Boy Who Invented Television traces Farnsworth's guided tour of discovery describing the observations he made in the course of developing and improving his initial invention and revealing how his unique insights brought him to the threshold of what could have been an even greater discovery clean safe and unlimited energy from controlled nuclear fusion Publisher
