Future Directions In Quark Nuclear Physics - Proceedings Of The Workshop Anthony W Thomas, Kazuo Tsushima, 1999-04-01 One of the most fundamental questions in understanding strong interaction is whether or not quarks and gluons play a significant role in nuclear systems At high densities we need to explore the existence and nature of a deconfinement phase transition At lower densities we wish to study the changes in the properties of a hadron particle as mass and electroweak form factors when it is immersed in nuclear matter Finally we may even ask whether the internal structure of the nucleon plays a role in the binding and properties of finite nuclei On the theoretical side the issues raised here are of concern to a very broad community from those working in traditional many body physics to those building effective field theories to those working in lattice QCD Experimentally there are many accelerators mature new and planned which can offer insight into this field from SLAC to HERA COSY CELSIUS and TJNAF This workshop brought together key figures from all areas of theoretical and experimental physics concerned with this fundamental problem **Proceedings of the Workshop on Lepton Scattering, Hadrons and QCD** Wally Melnitchouk, 2001 This volume is centered on recent developments in the exploration of hadronic structure through lepton scattering in the description of hadron physics directly from lattice QCD and non perturbative QCD models and in efforts to strengthen the links between these activities Specific topics that are covered include parton distribution functions polarized structure functions generalized structure functions nuclear effects quark hadron duality electromagnetic form factors structure functions and hadron properties from lattice QCD and QCD models based on the Dyson Schwinger equations **Proceedings of the Workshop on Physics at the Japan Hadron Facility (JHF)** Vadim Guzey, 2002 This volume outlines the exciting new opportunities in hadron physics which have been created by the Japan Hadron Facility JHF a major joint initiative between High Energy Accelerator Research Organization KEK and Japan Atomic Energy Research Institute JAERI The topics covered include unprecedented possibilities of studying strange matter neutrino oscillations and hadron structure The close interaction with lattice QCD is emphasised **Index of Conference Proceedings** British Library. Refereed and selected contributions from International Conference on Quark Nuclear Physics Charlotte Elster,Josef Speth,Thomas Walcher,2013-06-29 The International Conference on Quark Nuclear Physics 2002 QNP2002 was held in the Forschungszentrum Jilich from June 9 to 14 2002 It was organized by the Institute of Nuclear Physics IKP at the Forschungszentrum Jilich together with the Universities of Bonn und Mainz This meeting takes place every two years and was the successor to QNP2000 which was held in Adelaide QNP2002 brought together about 200 scientists from 25 countries who met for their scientific work in the Forschungszentrum but spent their free time in the medieval city of Aachen the former capital of Charles the Great The particular feature of this conference is that it provides a comprehensive overview of the at tempts in understanding hadrons and nuclei including dense matter in terms of their fundamental constituents the quarks and the gluons One of the basic themes of the program was that fact that we do have an underlying theory of strongly interacting particles namely the QCD For that rea son the experimental topics covered during the meeting ranged from precision measurements with hadronic and electromagnetic probes to ultra relativistic heavy ion reactions Correspondingly the theoretical topics spanned an equally wide range including perturbative and lattice QCD calcu lations as well as effective theories and QCD motivated quark models In the morning sessions invited reviews were given In the afternoon twelve topical parallel sessions directed by conveners summarized the newest research results
