

China on Campus: A Conversation with China Scholars of Asian Heritage

Dan Chen, *University of Richmond, USA*

Rongbin Han, *University of Georgia, USA*

John Yasuda, *Johns Hopkins University, USA*

Increasing tensions between the United States and China, a rise in anti-Asian sentiment, and the risk of government surveillance has dramatically altered the teaching and research contexts for scholars of Chinese politics. In this conversation, Dan Chen (University of Richmond), Rongbin Han (University of Georgia), and John Yasuda (Johns Hopkins University) discuss how questions of identity, politics, and security have affected classroom dynamics and their future research endeavors.

What is your institutional context? How are the politics of China taught at your university?

Dan: The University of Richmond is a private liberal arts institution with about 3,200 undergraduate students. We do not have a large cluster of faculty who teach classes on China or Asia more broadly. I'm the only person who teaches Chinese politics, which is typical for liberal arts colleges. Student interest in Chinese politics is driven by different motivations. For international students from China, they seek to "know the truth" about events that are censored at home. For American students, some take the course to fulfill their major requirements, whereas others have career aspirations in foreign service or immigration advocacy. Other students are driven by a general interest in China as a major power in global politics.

Rongbin: I joined the University of Georgia in 2013. University of Georgia is a public land-grant research university and Georgia's flagship institution, currently enrolling more than 40,000 graduate and undergraduate students. I am the only faculty member in my department who teaches Chinese politics at both graduate and undergraduate levels. Students take my courses for similar reasons as Dan's students. Although my university does not have an institutionalized platform centering on China studies (we have a Center for Asian Studies), I am lucky to be in the Atlanta area where a robust regional China Research Center allows me to connect with fellow scholars in the field.

John: At Johns Hopkins University, a private research university, there is broad interest in the study of China dispersed across a number of departments, including anthropology, East Asian studies, economics, history, political

science, and sociology. Close to a third of my students come from China and the rest hail from across the continental United States. Most of my enrollees have taken at least one other course on China or on East Asia. Students from China often cite an interest in the way that Western scholars view Chinese politics as a major reason for taking my course. Similar to Dan, my students from the United States have an expressed interest in pursuing careers in foreign service. There also has been a slight uptick in enrollments from students majoring in the sciences who simply want to gain additional insight on the China-related headlines of the day.

In what ways do you think people's perceptions of your ethnic or national identity affect the dynamics in your classes or your experience at academic conferences and public events? How would you like to see the problematic situations addressed?

Rongbin: Other than the rare instances in which I got yelled at on the street (twice since arriving in the United States in 2006), I have not encountered anything that is overly unpleasant. I feel fortunate that my experiences at academic conferences and public events have been "eventless" in this regard. My interaction with students has been smooth as well. In fact, my identity has likely affected the dynamics in a positive direction. Students perceive me as a reliable source on China. Probably due to my research on state censorship and the possible repercussions associated with doing research on "sensitive" topics, my students view me as a critical observer of the state. Many students are also aware of anti-Asian racism and have expressed their support.

That being said, this certainly should not be taken as evidence that "everything is fine" across higher education because selection bias might be at work. Students and colleagues simply might avoid my courses or the events that I attend if they have issues with where I am from. Moreover, because racial discrimination is not socially desirable, people may engage in impression management, making it more difficult to observe.

Indeed, I have heard troubling stories about our colleagues experiencing anti-Asian racism in both classroom and

Future Of China Scholars Views:

Forecasting China's Future Roger Irvine, 2015-06-26 China's future development is likely to have a huge impact on twenty first century global outcomes. It is therefore surprising that thus far so little attention has been given to comparing and evaluating expert forecasts of China's future in the post Mao era. This book presents an illuminating and comprehensive summary record of contrasting and competing expert forecasts and judgements about the major issues confronting China within four principal domains: political, economic, environmental and international. After considering the principal forecasting methods available to experts, the author comments critically on the degree of success achieved in using those methods and emphasises the confusion created by the polarisation of opinion and by the failure of many experts to accept the high degree of uncertainty that characterises most of the key issues. The book recommends a new approach based on the study of a hierarchy of critical uncertainties and on continuing analysis of opposing expert opinions about these uncertainties. It emphasises the potential for both positive and negative outcomes for these critical uncertainties and the importance of maximising the potential for positive outcomes through improved analytical and policy frameworks. Providing insights for specialists and non specialists into the most critical issues that will determine China's future direction, this book will be of particular interest to students and scholars of political, economic, environmental and international relations issues in China and Asia as well as to readers in business and government. Great Power Strategies - The United States, China and Japan

Quansheng Zhao, 2022-09-05 This book provides a comparative study of the strategies of great powers in the Asia Pacific, namely the United States, China and Japan, known as the Pacific Three. It examines the evolution of each power's strategic thinking and analyzes the three powers' respective foreign policies and internal debates in the policymaking process. It analyzes the three countries' conflict and cooperation from past to the present. It stresses the importance of the interactions between internal and external factors in the policymaking process and emphasizes the great significance of these interactions for international relations theory. For example, it highlights the role of strategic advisers in think tanks and government agencies in the United States, Japan's informal and balanced policymaking process, and the impact of traditional culture in China, especially Confucianism, and the part played by Chinese think tanks. *The Great Power Competition*

Volume 6 Adib Farhadi, Mark Grzegorzewski, Anthony J. Masys, 2025-01-13 China's Belt and Road Initiative (BRI) represents a monumental shift in the global power landscape. Through ambitious infrastructure projects and strategic economic investments, China has emerged as a formidable challenger to U.S. dominance in the modern Great Power Competition (GPC), leveraging a unique blend of soft power and non-interference policy. This distinctive strategy has allowed China to rapidly gain footholds in resource-rich regions such as Central Asia, South Asia, CASA and the Middle East, compelling the U.S. to rethink its foreign policy approach in response. Given China's adept leveraging of soft power in these geostrategic regions, the critical question arises: how can the U.S. meet the nuanced challenges of the modern GPC? *The Great Power Competition*

Volume 6 The Rise of China delves into China's calculated rise exploring how the BRI has captivated nations spanning pivotal regions entrenching Chinese influence across critical sectors This edited volume brings together distinguished global experts and thought leaders to provide comprehensive analyses of China's expanding influence across economic political technological and security domains The collection of essays offers critical insights and recommendations for navigating the modern day great power competition in an era defined by China's ascent The book highlights China's BRI brand diplomacy and its strategic use of soft power and non interference policy to reshape the geopolitical landscape The authors final analyses underscore that in the modern era of the GPC strategic competition and soft power are deeply intertwined

China Debates Its Global Role Shaun Breslin, Ren Xiao, 2021-09-30 What do China's scholars make of the nature of China's global rise And what is the significance of academic debates for Chinese policy goals and preferences In this book leading Chinese specialists outline how their colleagues are studying and interpreting different dimensions of China's evolving global role opening these Chinese language debates to a new audience Collectively they show that while some ideas and ways of thinking are more prominent than others there is no homogeneity of scholarship and no single conception of what China thinks and wants Not only has the range of issue areas under discussion actually increased as China's global role and impact has changed but there also remains considerable diversity when it comes to thinking on what China can might and should try to do as a global power and how China's global role should be studied and theorized The chapters in this book were originally published in the journal *The Pacific Review*

China's Authoritarian Path to Development Liang Tang, 2017-06-14 This book examines the various stages of China's development in the economic social and political fields relating theories and models of development to what is actually occurring in China and discussing how China's development is likely to progress going forward It argues that China's modernization hitherto can be characterized as authoritarian development a fusion of mixed economic institutions of varying types of ownership with social stability and political cohesiveness and that the present phase where more emphasis is being given to social issues is likely to lead on to a new phase where a more mature civil society and a more extensive middle class are likely to look for greater democratization It presents an in depth analysis of China's changing social structure and civil society explores the forces for and processes of democratization and assesses the prospects for further democratization in the light of changing social structures

Managing the China Challenge Quansheng Zhao, Guoli Liu, 2008-09-25 This edited volume addresses one of the most significant issues in international strategic studies today how to meet the challenge of a rising China The contributors take a global view of the topic offering unique and often controversial perspectives on the nature of the China challenge The book approaches the subject from a variety of angles including realist offensive realist institutional power transition interdependence and constructivist perspectives Chapters explore such issues as the US response to the China challenge Japan's shifting strategy toward a rising China EU China relations China's strategic partnership with Russia and India and

the implications of unipolarity for China the US and the world In doing so the volume offers insights into some of the key questions surrounding China's grand strategy and its potential effects on to the existing international order *Changing Regional Alliances for China and the West* David Lane, Guichang Zhu, 2017-11-15 Since the end of the World War II nation states have formed regions to give them some protection from the processes of globalization and internationalization Against this background the contributors consider the position of China in the processes of regional competitive interdependency This book offers analysis at three levels internal regional and global Chapters consider China's position in regional post socialist associations such as the BRICS the Shanghai Cooperation Organization SCO the Eurasian Economic Union EEU the Silk Road Economic Belt and the One Belt One Road OBOR Contributors discuss how membership in these regional bodies is likely to enhance China's economic power strategic position and political importance A major theme addressed is whether these new powers will become complementary to the American led economic core countries or evolve as countervailing powers Contributors suggest that linkages favored by China's regional associations are more network based and informal in character They are more in keeping with regionalization rather than regional blocs such as the European Union which have locked in members to market driven institutions Thus these new developments move away from a neo liberal market perspective and satisfy the needs of members to retain their economic and political sovereignty This book considers whether these new regional blocs led by China will perform a transformative process for the international order or become an alternative supplementary to but not replacing the existing institutions of the North An important topic is the relationship of Russia and China to the Central Asian countries of the former USSR and the interaction between the Russia led Eurasian Economic Union and the Chinese initiative of the Silk Road Economic Belt There is potential for the evolution of an alliance between China and Russia against the neo liberal order led by the USA Concurrently they bring out possible the tensions between Russia's and China's conflicting interests over influence in Central Asia Reactions to China's rise include the Trump administration's movement from a multilateral to a bi lateral trade policy and the threat of discriminatory tariffs for China The contributors seek to promote a better appreciation of China's role in regional associations and the implications of contemporary developments in economic geo political and international political affairs in the 21st century **China's Futures** Daniel C. Lynch, 2015-03-11 China's Futures cuts through the sometimes confounding and unfounded speculation of international pundits and commentators to provide readers with an important yet overlooked set of complex views concerning China's future views originating within China itself Daniel Lynch seeks to answer the simple but rarely asked question how do China's own leaders and other elite figures assess their country's future Many Western social scientists business leaders journalists technocrats analysts and policymakers convey confident predictions about the future of China's rise Every day the business political and even entertainment news is filled with stories and commentary not only on what is happening in China now but also what Western experts confidently think will happen in the future Typically missing from

these accounts is how people of power and influence in China itself imagine their country's developmental course. Yet the assessments of elites in a still super authoritarian country like China should make a critical difference in what the national trajectory eventually becomes. In *China's Futures*, Lynch traces the varying possible national trajectories based on how China's own specialists are evaluating their country's current course and his book is the first to assess the strengths and weaknesses of predictioneering in Western social science as applied to China. It does so by examining Chinese debates in five critical issue areas concerning China's trajectory: the economy, domestic political processes and institutions, communication and the Internet, arrival of the network society, foreign policy strategy and international soft power, cultural competition.

China's Governance Model Hongyi Lai, 2016-06-10. Many studies of government in China either simply describe the political institutions or else focus critically on the weaknesses of the system such as corruption or the absence of Western style democracy. Authors of these studies fail to appreciate the surprising ability of China's government to rapidly transform a once impoverished economy and to recover from numerous crises from 1978 to the present. This book, on the other hand, takes a more balanced, more positive view. This view is based on a study of changes in China's institutions for coping with critical crises in governance since 1978. These changes include better management of leadership succession, better crisis management, improved social welfare, the management of society through treating different social groups differently depending on their potential to rival the Party state and a variety of limited intra party and grassroots democracy. This book applies to the Chinese model, the term pragmatic authoritarianism. It explains changes to and the likely future direction of China's governance model. It compares current risks in China's governance with threats that terminated dynasties and the republic in China over the past four thousand years and concludes that the regime can be expected to survive a considerable period despite its existing flaws. Few topics in Chinese politics are as significant as the nature, state and prospects of the political regime. While the topic had been unduly understudied for a long period of time, a young generation of scholars has emerged on this subject. Among others, the book by Hongyi Lai stands out and provides a comprehensive and penetrating analysis on this topic. I am confident that his book will make a significant contribution to the study of Chinese politics and may well define the debate on China's political development, governance and model for years to come. Yongnian Zheng, Director, East Asian Institute, National University of Singapore.

Utopian Fiction in China Shuk Man Leung, 2023-09-29. Unlike previous studies that have examined the late Qing utopian imagination as an ahistorical motif, a literary theme and a translation phenomenon, in this book Shuk Man Leung considers utopian fiction as a knowledge apparatus that helped develop Chinese nationalism and modernity. Based on untapped primary sources in Chinese, English and Japanese, her research reveals how utopian imagination bloomed after Liang Qichao's publication of *The Future of New China*, served as a tool of knowledge formation and dissemination that transformed China's public sphere and catalysed historical change. Embracing an interdisciplinary approach from genre studies, studies on modern Chinese newspapers and intellectual history, this

book provides an analysis of the development of utopian literary practices epistemic meanings and fictional narratives and the interactions between traditional and imported knowledge that helped shape the discourse in early 20th century China

China's Long March Toward Rule of Law Randall Peerenboom, 2002-09-26 China has enjoyed considerable economic growth in recent years in spite of an immature albeit rapidly developing legal system a system whose nature evolution and path of development have been poorly understood by scholars Drawing on his legal and business experience in China as well as his academic background in the field Peerenboom provides a detailed analysis of China's legal reforms He argues that China is in transition from rule by law to a version of rule of law though most likely not a liberal democratic version as found in economically advanced countries in the West Maintaining that law plays a key role in China's economic growth Peerenboom assesses reform proposals and makes his own recommendations In addition to students and scholars of Chinese law political science sociology and economics this will interest business professionals policy advisors and governmental and non governmental agencies as well as comparative legal scholars and philosophers *China's Challenges and International Order Transition* Huiyun Feng, Kai He, 2020-01-30 China's Challenges and International Order Transition introduces an integrated conceptual framework of international order categorized by three levels power rules and norms and three issue areas security political and economic Each contributor engages one or more of these analytical dimensions to examine two questions 1 Has China already challenged this dimension of international order 2 How will China challenge this dimension of international order in the future The contested views and perspectives in this volume suggest it is too simple to assume an inevitable conflict between China and the outside world With different strategies to challenge or reform the many dimensions of international order China's role is not a one way street It is an interactive process in which the world may change China as much as China may change the world The aim of the book is to broaden the debate beyond the Thucydides Trap perspective currently popular in the West Rather than offering a single argument this volume offers a platform for scholars especially Chinese scholars vs Western scholars to exchange and debate their different views and perspectives on China and the potential transition of international order **Citizenship Education in China** Kerry J. Kennedy, Gregory

Fairbrother, Zhenzhou Zhao, 2013-10-15 There is a flourishing literature on citizenship education in China that is mostly unknown in the West Liberal political theorists often assume that only in democracy should citizens be prepared for their future responsibilities yet citizenship education in China has undergone a number of transformations as the political system has sought to cope with market reforms globalization and pressures both externally and within the country for broader political reforms Over the past decade Chinese scholars have been struggling for official recognition of citizenship education as a key component of the school curriculum in these changing contexts This book analyzes the citizenship education issues under discussion within China and aims to provide a voice for its scholars at a time when China's international role is becoming increasingly important China's Use of Military Force Andrew Scobell, 2003-09-08 In this unique study of China

s militarism Andrew Scobell examines the use of military force abroad as in Korea 1950 Vietnam 1979 and the Taiwan Strait 1995 1996 and domestically as during the Cultural Revolution of the late 1960s and in the 1989 military crackdown in Tiananmen Square Debunking the view that China has become increasingly belligerent in recent years because of the growing influence of soldiers Scobell concludes that China's strategic culture has remained unchanged for decades Nevertheless the author uncovers the existence of a Cult of Defense in Chinese strategic culture The author warns that this Cult of Defense disposes Chinese leaders to rationalize all military deployment as defensive while changes in the People's Liberation Army's doctrine and capabilities over the past two decades suggest that China's twenty first century leaders may use military force more readily than their predecessors

Vietnam and the South China Sea Do Thanh Hai, 2016-12-01 Studies of the escalating tensions and competing claims in the South China Sea overwhelmingly focus on China and its increasingly assertive approach while the position of the other claimants is overlooked This book focuses on the attitude of Vietnam towards the South China Sea dispute It examines the position from a historical perspective shows how Vietnam's position is affected by its wish to maintain good relations with China on a range of issues and outlines how Vietnam has occasionally made overtures to both the United States and Japan in order to bolster its position and considered the possibility so far resisted of taking China to formal arbitration under the auspices of the United Nations Convention on the Law of the Sea The book concludes by assessing the future prospects for Vietnam's position in the dispute
