Classification of automatic control in terms of control methodologies

Feedback

- What is feedback?
- Information that tells you how you're doing
- Automatic controller uses feedback
 - Difference between the Process Variable and the Set point (the error) tells the controller how well it's doing.
 - The less the error, the better the performance
- Open loop control does not use feedback
 - Example: timed lawn sprinkler system
 - Even if it rains, the sprinkler turns on because it has no feedback that
