Computing Research for Sustainability National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Computing Research for Environmental and Societal Sustainability, 2012-07-06 A broad and growing literature describes the deep and multidisciplinary nature of the sustainability challenges faced by the United States and the world Despite the profound technical challenges involved sustainability is not at its root a technical problem nor will merely technical solutions be sufficient Instead deep economic political and cultural adjustments will ultimately be required along with a major long term commitment in each sphere to deploy the requisite technical solutions at scale Nevertheless technological advances and enablers have a clear role in supporting such change and information technology IT is a natural bridge between technical and social solutions because it can offer improved communication and transparency for fostering the necessary economic political and cultural adjustments Moreover IT is at the heart of nearly every large scale socioeconomic system including systems for finance manufacturing and the generation and distribution of energy and so sustainability focused changes in those systems are inextricably linked with advances in IT The focus of

Computing Research for Sustainability is greening through IT the application of computing to promote sustainability broadly. The aim of this report is twofold to shine a spotlight on areas where IT innovation and computer science CS research can help and to urge the computing research community to bring its approaches and methodologies to bear on these pressing global challenges. Computing Research for Sustainability focuses on addressing medium and long term challenges in a way that would have significant measurable impact. The findings and recommended principles of the Committee on Computing Research for Environmental and Societal Sustainability concern four areas: 1 the relevance of IT and CS to sustainability, 2 the value of the CS approach to problem solving particularly as it pertains to sustainability challenges, 3 key CS research areas, and 4 strategy and pragmatic approaches for CS research on sustainability. *Handbook of Research on Global Information Technology Management in the Digital Economy* Raisinghani, Mahesh S., 2008-01-31. Includes the most important issues, concepts, trends, and technologies in the field of global information technology management, covering topics such as the technical platform for global IS applications, information systems projects spanning cultures, managing information technology in corporations, and global information technology systems and socioeconomic development in developing countries. **Computing and the National Science Foundation, 1950-2016** Peter A. Freeman, W. Richards Adrion, William Aspray, 2019-11-21. This organizational history relates the role of the National Science Foundation (NSF) in the development of modern computing. Drawing upon new and existing oral histories, extensive use of NSF documents, and the experience of two of the authors as senior managers, this book describes how NSF's programmatic activities originated and evolved to become the primary source of funding for fundamental research in computing and information technologies. The book traces how NSF's support has provided facilities and education for computing usage by all scientific disciplines, aided in institution and professional community building, supported fundamental research in computer science and allied disciplines, and led the efforts to broaden participation in computing by all segments of society. Today, the research and infrastructure facilitated by NSF computing programs are significant economic drivers of American society and industry. For example, NSF supported work that led to the first widely used web browser, Netscape, sponsored the creation of algorithms at the core of the Google search engine, facilitated the growth of the public Internet, and funded research on the scientific basis for countless other applications and technologies. NSF has advanced the development of human capital and ideas for future advances in computing and its applications. This account is the first comprehensive coverage of NSF's role in the extraordinary growth and expansion of modern computing and its use. It will appeal to historians of computing, policy makers, and leaders in government and academia, and individuals interested in the history and development of computing and the NSF. **FastLane** Thomas J. Misa, Jeffrey R. Yost, 2016-01-15. The unique history and development of FastLane, the central nervous system of the National Science Foundation. Since 2000, the National Science Foundation has depended upon its pioneering FastLane e-government system to manage grant applications, peer reviews, and reporting. In this behind-the-scenes

account Thomas J Misa and Jeffrey R Yost examine how powerful forces of science and computing came together to create this influential grant management system assessing its impact on cutting edge scientific research Why did the NSF create FastLane and how did it anticipate the development of web based e commerce What technical challenges did the glitch prone early system present Did the switch to electronic grant proposals disadvantage universities with fewer resources And how did the scientific community help shape FastLane Foregrounding the experience of computer users the book draws on hundreds of interviews with scientific researchers sponsored project administrators NSF staff and software designers developers and managers **Science & Engineering Indicators** ,2000 OECD Science, Technology and Industry Outlook 2002 OECD,2002-10-04 In addition to reviewing recent trends this report identifies significant changes in science technology and industry policies in the OECD countries *Fair Weather* National Research Council,Division on Earth and Life Studies,Computer Science and Telecommunications Board,Board on Atmospheric Sciences and Climate,Board on Earth Sciences and Resources,Committee on Geophysical and Environmental Data,Committee on Partnerships in Weather and Climate Services,2003-05-14 Decades of evolving U S policy have led to three sectors providing weather services NOAA primarily the National Weather Service NWS academic institutions and private companies This three sector system has produced a scope and diversity of weather services in the United States second to none However rapid scientific and technological change is changing the capabilities of the sectors and creating occasional friction *Fair Weather Effective Partnerships in Weather and Climate Services* examines the roles of the three sectors in providing weather and climate services the barriers to interaction among the sectors and the impact of scientific and technological advances on the weather enterprise Readers from all three sectors will be interested in the analysis and recommendations provided in *Fair Weather*

shareholder value MSV that emerged in the 1980s came to dominate strategic thinking in business schools and corporate boardrooms in the United States Undermining the social foundations of sustainable prosperity it resulted in employment instability income inequity and slow productivity growth In explaining what happened to sustainable prosperity William Lazonick and Jang Sup Shin focus on the growing imbalance between value creation and value extraction in the U S economy and the corporate governance institutions that determine this balance in the nation s major business corporations The imbalance has become so extreme that predatory value extraction is now a central economic activity to the point at which the U S economy as a whole can be aptly described as a value extracting economy Balancing the contributions of economic actors to value creation with their power to extract value provides the foundation for stable and equitable economic growth When certain economic actors are able to assert their power to extract far more value than they contribute to the value creation process an imbalance occurs which when extreme leads to dire economic political and social consequences This book not only explores these consequences but also sets out an agenda for restoring sustainable prosperity *Capitalizing on New Needs and New Opportunities* National Research Council,Policy and Global Affairs,Board on Science, Technology, and Economic Policy,2001-02-11 This report addresses a topic of recognized policy concern To capture the benefits of substantial U S investments in biomedical R D parallel investments in a wide range of seemingly unrelated disciplines are also required This report summarizes a major conference that reviewed our nation s R D support for biotechnology and information technologies The volume includes newly commissioned research and makes recommendations and findings concerning the important relationship between information technologies and biotechnology It emphasizes the fall off in R D investments needed to sustain the growth of the U S economy and to capitalize on the growing investment in biomedicine It also encourages greater support for inter disciplinary training to support new areas such as bioinformatics and urges more emphasis on and support for multi disciplinary research centers **Selling Out a Superpower** Ronald R.

Pollina,2011-03-08 In 1968 there were sixty two lobbyists in Washington today there are thirty four thousand outnumbering members of Congress and their staffers two to one By 2008 these lobbyists were spending approximately 8 2 million for influence per day Few if any of these lobbyists represent the majority of Americans in the middle class So it s not surprising given these statistics that real median household income in America has stagnated for over a decade This hard hitting book documents that a combination of special interest groups and their army of money peddling lobbyists along with government mismanagement of business and the economy by both parties have betrayed the American middle and lower classes for the last twenty years The result is a host of misguided laws and policies that have driven jobs and whole industries offshore never to return The author takes issue with those who emphasize the potential benefits of globalization without taking notice of its many negative effects on American society He also argues that inept policy threatens to derail the American economy permanently and that our economic malaise is more than a short term reaction to a financial market collapse or global

market forces He cites critical areas where changes must be made to reverse the negative trend Improving our 1950s era educational system to produce a workforce able to compete for 21st century jobs Reform of tax codes that have been driving companies and jobs offshore We are currently a nation that manufactures practically nothing Weaning all levels of government away from deficit spending which drains economic power Pursuing free trade that also means fair trade Ending the cycle of credit card debt and all too easy mortgage credit to finance ultimately unaffordable lifestyles Making the United States more business friendly so companies will grow and provide desperately needed jobs here at home The author warns that unless we implement these and other recommended changes the American economy will inevitably decline while China India and other up and coming nations ascend He maintains that all is not lost If we follow the course he sets we can reinvigorate and renew our economy rebuild America's greatness create 21st century jobs and more This book provides a roadmap for reclaiming American preeminence
