From The Black Hole To The Infinite Universe:

From the Black Hole to the Infinite Universe Donald Goldsmith, Donald Levy, 1974 **The Infinite Universe of Einstein and Newton** Barry Bruce, 2003 After developing his Law of Gravitation Newton came to believe that the Universe was infinite and homogeneous on a large scale Einstein's original intuition was similar to Newton's in that he thought our Universe was static infinite isotropic and homogeneous The field equations of Einstein's general relativity are solved for this universe One of the three solutions found the infinite closed universe traps light within a finite portion of the universe This infinite closed universe model is shown to fit all the data of the Hubble diagram better than the Big Bang and it fits the recent supernova data without having to postulate mysterious dark energy Using general relativity and the physics which evolved from Newton the author finds the force of gravity between two point particles Utilizing this force and the infinite closed universe model the net force of gravity on a point particle in arbitrary motion due to the uniform mass distribution of the universe is calculated by an integration This net force of gravity is found to be equal to the force of inertia These calculations explain Newton's First Law Newton's Second Law and the equivalence of inertial and gravitational mass In addition by the extension of Einstein's general relativity to two body interactions Newton's Third Law is elicited These results show that the cosmological redshift and the physics that we know are likely the result of the uniform mass distribution of our infinite closed universe and gravity alone *NASA EP*. United States. National Aeronautics and Space Administration, 1968

Our Universe-Infinite and Eternal Barry Bruce, 2012-11 The field equations of Einstein's General Relativity are solved for an infinite universe with uniform density One of the three solutions the Infinite Universe of Einstein and Newton fits all the data for the Hubble diagram better than the Big Bang Next using general relativity and the physics that evolved from Newton the force of gravity between two massive point particles is found Utilizing this force and the Infinite Universe of Einstein and Newton model the net force of gravity on a point particle in arbitrary motion due the uniform mass distribution of the universe is calculated by integration This net force of gravity is found to be equal to the Force of Inertia These calculations explain Newton's First Law Newton's Second Law and the equivalence of inertial and gravitational mass The middle of the book deals with the development of quantum mechanics Here it is shown that hidden within the classical mechanics of particles there is the phase of a wave associated with a particle that moves at the speed of a de Broglie wave The form of the phase of the wave is developed Making use of the form of the phase the Hamilton Jacobi equation for a particle is setup to be solved using an integrating factor The resulting equation is manipulated directly into the form of the Schrodinger equation This development requires that the particle Hamilton Jacobi equation has a solution whenever the Schrodinger equation has a solution and vice versa The classical wave function is then shown to have exactly the same mathematical properties as the quantum mechanical wave function including the fact that the absolute value squared of the classical wave function has the mathematical properties of a probability density However the interpretation that this is a

probability density for the particle is shown not to hold Lastly the missing matter problem is resolved by showing that the dynamics and the mass of a spiral galaxy are better and more naturally explained by using ordinary physics with ordinary interacting matter than they are by postulating and using exotic weakly interacting dark matter

The Infinite Cosmos Joseph Silk, 2008-02-13 From time immemorial poets and philosophers have looked in awe and wonder at the Universe Such awe is shared by astrophysicists too as they seek to understand its nature and whether it has any limits In *The Infinite Cosmos* Joseph Silk Savilian Professor of Astronomy at Oxford University cosmologist and well known science writer brings together the modern understanding of the Universe its structure its evolution and its possible fate combining the latest from theory and observation The narrative is peppered with quotations from literature and philosophy and reflects too on the process of scientific discovery and the implications of our discoveries

Our Mathematical Universe Max Tegmark, 2015-02-03 Max Tegmark leads us on an astonishing journey through past present and future and through the physics astronomy and mathematics that are the foundation of his work most particularly his hypothesis that our physical reality is a mathematical structure and his theory of the ultimate multiverse In a dazzling combination of both popular and groundbreaking science he not only helps us grasp his often mind boggling theories but he also shares with us some of the often surprising triumphs and disappointments that have shaped his life as a scientist Fascinating from first to last this is a book that has already prompted the attention and admiration of some of the most prominent scientists and mathematicians

How the world can be improved Rafael Barracuda, 2022-07-14 If we want to improve life on earth and our own lives it is necessary to find a new guide one that can meet the challenges of our time and of the future The old guides were good in principle but have become bogged down in calcified structures often accomplishing the opposite of what was originally intended The development of society makes it necessary to find new guiding principles from time to time To do so however we need to know what the history was how the present society is structured and how it is likely to develop The author aims to discover this by highlighting the following topics Information truth and lies Conspiracies real and imagined conspiracies Nodes and choices in history and as individuals Education Religions Cultures and subcultures Good and evil Resolving conflicts Freedom Justice Security How a poor country can become rich Nature and the environment and global warming Art Creativity The meaning of life Peace Reform of the United Nations Health Physical and mental Advice on how to become happy What ultimately matters is how to safeguard and

promote life on earth According to the author making the right choice at certain crucial moments called nodes is of great importance Ultimately it is about love and the unity of all and everything Cultures and Religions Rafael

Barracuda,2024-06-04 This book is about Cultures Religions and their ethics in the world their development and their transition to a world that is becoming more and more one All kinds of aspects of different cultures are described The difference between race and culture modern subcultures like e g the Ghotics and immigration cultures in Europe especially of Muslims In addition there is a chapter on paranormal matters considered from a scientific point of view It also describes Western Hindu and Chinese numerology and the I Ching Then there is a chapter on the core of Judaism Christianity Islam and other religions There is a special chapter describing traditional ethnic cultures of various Indian and African peoples and myths both from Ancient Egypt the Gilgamesh epic the King Gesar epic from Tibet and Mongolia and myths from Korea Australia and other peoples For example a description of the Book of Giants is included shedding new light on Genesis which holds a warning for the future Then there is a description of a possible rule of life education and philosophy which can take place in a globalised world According to the author all cultures and religions must change if they are to be part of a future multicultural multi religious world that has become one For this the bad elements must disappear from all ethnic and other cultures and the good elements must be preserved The Truly Infinite Universe David James Stewart,2019-06-14 The

discoveries of general relativity and quantum mechanics in the 20th century provide the perfect opportunity for Hegel s thought to become more topical than it has ever been By bringing speculative philosophy into conversation with quantum cosmology this book develops Hegel s metaphysics of true infinitude and Hawking s theory on the origins of spacetime in tandem providing a compelling rationale for the idea that the universe is a self generating self organizing self enclosed whole Ever sensitive to the complex relationship of scientific philosophical and theological issues in theoretical cosmology the study brings a fresh perspective to the unique brand of metaphysical theology underlying speculative philosophy and offers a new way of conducting transdisciplinary work involving Hegelian thought This is essential reading for Hegel scholars Hawking scholars those interested in philosophical cosmology the ontology of the quantum void the realism vs idealism debate infinitude imaginary time and dialectical materialism and those compelled by post classical approaches to theology

Anthropic Bias Nick Bostrom,2013-10-11 Anthropic Bias explores how to reason when you suspect that your evidence is biased by observation selection effects that is evidence that has been filtered by the precondition that there be some suitably positioned observer to have the evidence This conundrum sometimes alluded to as the anthropic principle self locating belief or indexical information turns out to be a surprisingly perplexing and intellectually stimulating challenge one abounding with important implications for many areas in science and philosophy There are the philosophical thought experiments and paradoxes the Doomsday Argument Sleeping Beauty the Presumptuous Philosopher Adam the Absent Minded Driver the Shooting Room And there are the applications in contemporary science cosmology How many universes are there Why does

the universe appear fine tuned for life evolutionary theory How improbable was the evolution of intelligent life on our planet the problem of time s arrow Can it be given a thermodynamic explanation quantum physics How can the many worlds theory be tested game theory problems with imperfect recall How to model them even traffic analysis Why is the next lane faster Anthropic Bias argues that the same principles are at work across all these domains And it offers a synthesis a mathematically explicit theory of observation selection effects that attempts to meet scientific needs while steering clear of philosophical paradox

Metaphor and Analogy in the Sciences F. Hallyn, 2013-03-14 Science constructs its objects is this a metaphor It does not necessarily mean anyway that the real does not pre exist Only that in the final instance it is the Other of which we know neither the limits nor the figure and to which we only have access through the constructions we make of it Or in semiotic terms borrowed from Charles S Peirce the world is the dynamic object that intervenes in science only through the immediate objects that manifest themselves in signs And even then the choice of the term immediate is not entirely felicitous it would be better to talk of mediated objects since their conception is mediated by the conditions from which perception as well as the language that expresses it derive The preference bestowed on certain constructions over others results from the slighter recalcitrance in imagining a dynamic object through one or another mediated object This recalcitrance that prompts one to surrender constructions does not come directly from the real from the dynamic object but from other constructions Again this does not mean that reality does not ex ist but that it only speaks confirms and objects to the extent that it is being questioned within a certain form by certain instruments in a certain language Even if it appears recalcitrant the dynamic object intervenes only through another construction Man not nature decides on the form to be considered the instruments and language to be adopted

The Self-Actualizing Cosmos Ervin Laszlo, 2014-03-02 An exploration of the current revolution in scientific thought and the newest scientific findings in support of the Akashic field Explains how the new Akasha paradigm recognizes the interconnection of all things in space and time through the quantum resonance of the Akashic field Reveals the cosmos to be a self actualizing self organizing whole bringing forth life and consciousness in countless universes Explores the latest discoveries in the sciences of life mind and cosmos Science evolves through alternating phases of normal science and radical shifts that create scientific revolutions We saw this at the turn of the 20th century when science shifted from a Newtonian worldview to Einstein s relativity paradigm and again with the shift to the quantum paradigm Now as we recognize the nonlocal interconnection of all things in space and time we find our scientific worldview shifting once again With contributions by physicists Paul A LaViolette and Peter Jakubowski pioneering systems scientist Ervin Laszlo explores the genesis of the current revolution in scientific thought and the latest findings in support of the Akashic field He explains how the burgeoning Akasha paradigm returns our way of thinking to an integral consciousness a nonlinear mode of understanding that enables us to accept the reality of nonlocal interconnection throughout the world This new inclusive way of understanding reaffirms the age old instinctive comprehension of deep connections among people societies and nature and

it integrates and transcends classical religious and scientific paradigms Providing examples from cutting edge science of quantum resonance based interactions among all living systems Laszlo shows the cosmos of the Akasha to be a self actualizing self organizing whole where each part is in coherence with all others and all parts together create the conditions for the emergence of life and consciousness The advent of the Akasha paradigm marks a new stage in science s understanding of the fundamental nature of the world and offers unique guidance for contemporary efforts to create a peaceful and sustainable world

BLACK HOLES THE END OF UNIVERSE? JOHN TAYLOR,1974 Infinity Theories Eleanor Hawking,AI,2025-02-17 Infinity Theories explores the concept of infinity across mathematics physics and cosmology bridging abstract mathematical concepts with their potential physical implications The book investigates whether infinity is merely a mathematical tool or a physical reality One intriguing aspect is the role of infinity in physical theories such as the singularity at the center of black holes and the infinite energy densities predicted by some quantum field theories The book delves into the debate surrounding the possibility of an infinite universe examining its implications for concepts like the multiverse and the arrow of time The book is structured in three main sections mathematical foundations the role of infinity in physical theories like general relativity and quantum mechanics and the possibility of an infinite universe It emphasizes the distinction between mathematical abstraction and physical reality cautioning against the uncritical application of mathematical infinities to physical phenomena It uses data from astronomical surveys cosmological models and theoretical physics research *You are the Ultimate Infinite Existence* Porla Lingappa,2025-06-13 Thath thwam asi You are ultimate infinite consciousness Vedas O Ramachandra As metal is refined in the furnace so man unifies himself with and becomes the Infinite Divine consciousness Supreme Self Paramathma by acquiring the knowledge of the Infinite consciousness Sri Vasishta Gita Only the young the strong and the people with sharp intelligence can see the Supreme Consciousness Upanishads Link between Sharp intelligence and Seeing God or Infinite Substratum or Supreme Consciousness is only told by Ancient Indian philosophers and no other philosophy or religion in the world has told this unique and interesting subject Also Indian philosophers advised us to be free spiritually not just being spiritual You are the Ultimate Infinite Existence nothing is beyond or above or other than you in the Universe Vedhantha **Out of Chaos** Wayne M.
