From Nuclear Transmutation to Nuclear Fission, 1932-1939, 2002 This work deals with a particular phase in the early history of nuclear physics what in effect became a race between four laboratory teams to be the first to achieve the transmutation of atomic nuclei with artificially accelerated nuclear projectiles protons in high voltage discharge tubes

The Apocalypse Factory: Plutonium and the Making of the Atomic Age Steve Olson, 2020-07-28 A thrilling narrative of scientific triumph decades of secrecy and the unimaginable destruction wrought by the creation of the atomic bomb It began with plutonium the first element ever manufactured in quantity by humans Fearing that the Germans would be the first to weaponize the atom the United States marshaled brilliant minds and seemingly inexhaustible bodies to find a way to create a nuclear chain reaction of inconceivable explosive power In a matter of months the Hanford nuclear facility was built to produce and weaponize the enigmatic and deadly new material that would fuel atomic bombs In the desert of eastern Washington State far from prying eyes scientists Glenn Seaborg Enrico Fermi and many thousands of others the physicists engineers laborers and support staff at the facility manufactured plutonium for the bomb dropped on Nagasaki and for the bombs in the current American nuclear arsenal enabling the construction of weapons with the potential to end human civilization With his characteristic blend of scientific clarity and storytelling Steve Olson asks why Hanford has been largely overlooked in histories of the Manhattan Project and the Cold War Olson who grew up just twenty miles from Hanford's B Reactor recounts how a small Washington town played host to some of the most influential scientists and engineers in American history as they sought to create the substance at the core of the most destructive weapons ever created The Apocalypse Factory offers a new generation this dramatic story of human achievement and ultimately of lethal hubris

Making 20th Century Science Stephen G. Brush, Ariel Segal, 2015 Historically the scientific method has been said to require proposing a theory making a prediction of something not already known testing the prediction and giving up the theory or substantially changing it if it fails the test A theory that leads to several successful predictions is more likely to be accepted than one that only explains what is already known but not understood This process is widely treated as the conventional method of achieving scientific progress and was used throughout the twentieth century as the standard route to

discovery and experimentation But does science really work this way In *Making 20th Century Science* Stephen G Brush discusses this question as it relates to the development of science throughout the last century Answering this question requires both a philosophically and historically scientific approach and Brush blends the two in order to take a close look at how scientific methodology has developed Several cases from the history of modern physical and biological science are examined including Mendeleev's Periodic Law Kekule's structure for benzene the light quantum hypothesis quantum mechanics chromosome theory and natural selection In general it is found that theories are accepted for a combination of successful predictions and better explanations of old facts *Making 20th Century Science* is a large scale historical look at the implementation of the scientific method and how scientific theories come to be accepted

The Quantum Exodus Gordon Fraser, 2012-02-23 It was no accident that the Holocaust and the Atomic Bomb happened at the same time When the Nazis came into power in 1933 their initial objective was not to get rid of Jews Rather their aim was to refine German culture Jewish professors and teachers at fine universities were sacked Atomic science had attracted a lot of Jewish talent and as Albert Einstein and other quantum exiles scattered they realized that they held the key to a weapon of unimaginable power Convinced that their gentile counterparts in Germany had come to the same conclusion and having witnessed what the Nazis were prepared to do the exiles were afraid They had to get to the Atomic Bomb first The Nazis meanwhile had acquired a more pressing objective their persecution of the Jews had evolved into extermination Two dreadful projects the Bomb and the Holocaust became locked in a grisly race

The Age of Innocence Roger H. Stuewer, 2018-07-12 The two decades between the first and second world wars saw the emergence of nuclear physics as the dominant field of experimental and theoretical physics owing to the work of an international cast of gifted physicists Prominent among them were Ernest Rutherford George Gamow the husband and wife team of Frédéric and Irène Joliot-Curie John Cockcroft and Ernest Walton Gregory Breit and Eugene Wigner Lise Meitner and Otto Robert Frisch the brash Ernest Lawrence the prodigious Enrico Fermi and the incomparable Niels Bohr Their experimental and theoretical work arose from a quest to understand nuclear phenomena it was not motivated by a desire to find a practical application for nuclear energy In this sense these physicists lived in an Age of Innocence They did not however live in isolation Their research reflected their idiosyncratic personalities it was shaped by the physical and intellectual environments of the countries and institutions in which they worked It was also buffeted by the political upheavals after the Great War the punitive postwar treaties the runaway inflation in Germany and Austria the Great Depression and the intellectual migration from Germany and later from Austria and Italy Their pioneering experimental and theoretical achievements in the interwar period therefore are set within their personal institutional and political contexts
