Front to Back Sally Lewis, 2012-05-16 FRONT TO BACK sees urban housing as places to live rather than individual buildings Using a unique design agenda it provides a step by step approach to achieving quality urban living **Front to Back** Sally Lewis, 2009 Annotation Shows how the principles of design can be developed to make housing contribute positively to quality urban environments **Introduction to Residential Layout** Mike Biddulph, 2007-03-30 Introduction to Residential Layout is ideal for students and practitioners of urban design planning engineering architecture and landscape seeking a comprehensive guide to the theory and practice of designing and laying out residential areas Mike Biddulph provides a clear and coherent framework from which he offers comprehensive practical advice for designers of housing developments Referring to a wealth of international examples this is a richly illustrated accessible resource covering the whole range of issues that should be considered by anyone engaging in the planning and design of a new residential scheme A successful residential development must work on many levels financial social and environmental This book includes analysis of commercial viability the importance of place making environmental sustainability and designing accessibility Mike Biddulph details successful approaches to designing out crime and maximising permeability as part of an integrated approach to urban design Highly illustrated throughout this work will show you how to turn design aspirations and principles into practical design solutions Written without preconceptions Introduction to Residential Design highlights the strengths and weaknesses of particular design solutions to encourage both depth of thought and creativity Mike Biddulph is Senior Lecturer in Urban Design at Cardiff University **Design Quality in New Housing** Matthew Cousins, 2009-06-02 This book addresses the need for an in depth study into design quality in new housing The wider implications of policy and design are examined through a series of case studies of new housing projects in the UK and the Netherlands Dutch interdisciplinary design and modern methods of construction are widely considered to be of the highest quality from which much can be learned and understood This new guide offers architects the best practice for the design policy and construction of new homes The author considers proposals for the Thames Gateway and government incentives to create better quality housing including the 60 000 house and design reviews The wider implications of skills and training of architects planners design professionals and those parties involved in housing are also addressed *Sustainable Urban Design* Adam Ritchie, Randall Thomas, 2013-12-16 By the end of the twenty first century it is thought that three quarters of the world s population will be urban our future is in cities Making these cities healthy vibrant and sustainable is an exceptional challenge which this book addresses It sets out some of the basic principles of the design of our future cities and through a series of carefully selected case studies from leading designers experience illustrates how these ideas can be put into practice Building on the first edition s original format of design guidance and case studies this new edition updates the ideas and techniques resulting from further research and practice by the contributors This book emphasises the enormous progress made towards exciting

new designs that integrate good design with resource efficiency *Urban design: The ecological thinking - A compendium*
Dimitra Babalis,2008 **Ecopolis** Dimitra Babalis,2007 **Socially Restorative Urbanism** Kevin Thwaites,Alice Mathers,Ian Simkins,2013-08-22 The need for a human orientated approach to urbanism is well understood and yet all too often this dimension remains lacking in urban design In this book the authors argue for and develop socially restorative urbanism a new conceptual framework laying the foundations for innovative ways of thinking about the relationship between the urban spatial structure and social processes to re introduce a more explicit people centred element into urban place making and its adaptation Focusing on this interplay between humans and the built environment two new concepts are developed the transitional edge a socio spatial concept of the urban realm and Experiemics a participative process that acts to redress imbalances in territorial relationships defined in terms of the awareness of mine theirs ours and yours MTOY In this way Socially Restorative Urbanism shows how professional practice and community understanding can be brought together in a mutually interdependent and practical way Its theoretical and practical principles are applicable across a wide range of contexts concerning human benefit through urban environmental change and experience and it will be of interest to readers in the social sciences and environmental psychology as well as the spatial planning and design disciplines

Environmental Design Randall Thomas,2006 Written and edited by a team of specialists at Max Fordham LLP one of the UK s leading environmental and building services engineering consultancies Environmental Design is the result of their extensive experience in designing environmentally friendly buildings The principles of their approach which they have taught in numerous schools of architecture and engineering are clearly presented here The book starts with some basic scientific principles and environmental issues and then moves on to site planning energy use materials and building form Natural ventilation systems high efficiency mechanical equipment and alternative energy sources are also covered State of the art buildings of exceptional quality are incorporated throughout the text and illustrate the authors belief that environmentally responsible architecture can be visually exciting They conclude with a selection of detailed case studies of award winning projects including new for this third edition Beaufort Court King s Langley and the National Trust Headquarters Swindon This book is essential reading for architects engineers planners and students of these disciplines *Constructing Professional Discourse* Concepción Orna-Montesinos,2012-01-17 This book explores the fascinating role that language plays in the construction of non verbal objects by mapping out the ontological meaning of the specialised concepts and the domain specific knowledge embedded in them In doing so it provides a comprehensive linguistic insight into the discourse of professional domain specific communities and hence into the communication practices and procedures of those communities In this respect the book offers a response to the claims made by many of the most influential applied linguists today such as Vijay Bhatia 1993 2004 John Swales 1990 2004 or Ken Hyland 2002 among others who have consistently defended the need for applied linguistic research into the textual generic and social perspectives on the under researched interrelatedness of

the discursual and professional practices of a discipline Specifically this book provides readers with an integrative multi perspective approach to the study of professional domain specific discourses While it mainly draws on the tenets of genre theory and discourse semantics it also nurtures from the theoretical and empirical foundations of applied linguistics cognitive linguistics corpus linguistics and ontological engineering The book starts from the analysis of domain specific texts as final written products with specific lexico grammatical semantic and rhetorical features to later enquire into the written products as textual artefacts closely linked to the social context of production and interpretation of the text This integrative approach provides fresh new insights into the way the processes of writing are affected by the community specific institutional and socio historical circumstances in which domain specific texts are produced
