Heavy Elements And Related New Phenomena (In 2 Volumes) Walter Greiner,Raj Kumar Gupta,1999-06-17 This book reviews recent developments in the field of superheavy elements and the related phenomena of fission cluster radioactivity and drip line physics Both the experimental and theoretical aspects are dealt with in detail For the production of new elements in the laboratory the process of cold compound nucleus formation is found to be most favorable both theoretically and experimentally However experimentally hot fusion of nuclei has also been used Both the physical and chemical methods of synthesizing new elements are discussed The theoretical approaches considered here are those of the quantum mechanical fragmentation theory the self consistent Hartree Fock theory and the relativistic mean field theory Fission a process inverse to the fusion of two nuclei is also observed to be most favourably a cold phenomenon Other important results are bi modal fission and high n multiplicity fission which leads to the hyperdeformed scission mode Cluster radioactivity is discussed both as a heavy cluster emission process and as super asymmetric fission The theory as well as the present experimental status are reviewed Physics at drip lines is interesting not only for their structural properties but also for their use in the fusion of two nuclei both aspects are discussed

The Long-Lasting Quest for Nuclear Interactions: The Past, the Present and the Future Laura Elisa Marcucci, 2021-01-05

Emerging Frontiers in Nonlinear Science Panayotis G. Kevrekidis, Jesús Cuevas-Maraver, Avadh Saxena, 2020-05-29 This book explores the impact of nonlinearity on a broad range of areas including time honored fields such as biology geometry and topology but also modern ones such as quantum mechanics networks metamaterials and artificial intelligence The concept of nonlinearity is a universal feature in mathematics physics chemistry and biology and is used to characterize systems whose behavior does not amount to a superposition of simple building blocks but rather features complex and often chaotic patterns and phenomena Each chapter of the book features a synopsis that not only recaps the recent progress in each field but also charts the challenges that lie ahead This interdisciplinary book presents contributions from a diverse group of experts from various fields to provide an overview of each field's past present and future It will appeal to both beginners and seasoned researchers in nonlinear science numerous areas of physics optics quantum physics biophysics and applied mathematics ODEs PDEs dynamical systems machine learning as well as engineering

Modern Nuclear Physics Alexandre Obertelli, Hiroyuki Sagawa, 2021-09-25 This textbook is a unique and ambitious primer of nuclear physics which introduces recent theoretical and experimental progresses starting from basics in fundamental quantum mechanics The highlight is to offer an overview of nuclear structure phenomena relevant to recent key findings such as unstable halo nuclei superheavy elements neutron stars nucleosynthesis the standard model lattice quantum chromodynamics LQCD and chiral effective theory An additional attraction is that general properties of nuclei are comprehensively explained from both the theoretical and experimental viewpoints The book begins with the conceptual and mathematical basics of quantum mechanics and goes into the main point of nuclear physics nuclear structure radioactive ion beam physics and nuclear reactions The last chapters devote interdisciplinary topics in association with astrophysics and particle physics A number of illustrations and exercises with complete solutions are given Each chapter is comprehensively written starting from fundamentals to gradually reach modern

aspects of nuclear physics with the objective to provide an effective description of the cutting edge in the field **Quantum Field Theory and String Theory** L. Baulieu, Vladimir Dotsenko, Vladimir Kazakov, Paul Windey, 2012-12-06 The Cargese Workshop Quantum Field Theory and String Theory was held from May 10 to May 21 1993 The broad spectrum of the work presented at the Workshop was the reflection of a time of intensive search for new ways of solving some of the most fundamental problems in string theory quantum gravity and non perturbative field theory A number of talks indicated the emergence of new promising domains of investigation It is this very diversity of topics which in our opinion represents one of the most attractive features of the present volume which we hope will provide a good orientation in the abundant flow of ideas and publications in modern quantum field theory Many contributions to the present proceedings are concerned with two dimensional quantum field theory The continuous advances in the domain of two dimensional integrable theories on the lattice as well as in the continuum including conformal field theories Liouville field theory and matrix models of two dimensional quantum gravity are very well represented Other papers address physically realistic and therefore very complicated problems like developed turbulence the Hofstadter problem higher dimensional gravity and phenomenological strings A new elegant class of topological field theories is presented New ideas in the string representation of multicolor quantum chromodynamics were widely discussed at the Workshop more particularly the example of the exactly solvable two dimensional case **Frontiers Topics in Nuclear Structure**, 1993 **Density Functional Theory** Eberhard K.U. Gross, Reiner M. Dreizler, 2013-06-29 The first Nato Advanced Studies Institute entirely devoted to density functional theory was held in Portugal in September 1983 The proceedings of this School published in early 1985 is still used as a standard reference covering the basic development of the theory and applications in atomic molecular solid state and nuclear physics However astonishing progress has been achieved in the intervening years The foundations of the theory have been extended to cover excited states and time dependent problems more fully density functional theory of classical liquids and superconducting systems has been addressed and extensions to relativistic that is field theoretical systems as well as a more thorough discussion of magnetic field problems have been presented In addition new functionals have been devised for instance under the heading of generalised gradient expansions and the number of applications in the traditional fields has steadily increased in particular in chemistry Applications in new fields as for instance the structure of atomic clusters and the marriage of density functional theory with molecular dynamics and simulated annealing have provided additional impetus to the field of density functional theory From Newton to Chaos Archie E. Roy, B.A. Steves, 2013-06-29 The reader will find in this volume the Proceedings of the NATO Advanced Study Institute held in Cortina d Ampezzo Italy between July 25 and August 6 1993 under the title From Newton to Chaos Modern Techniques for Understanding and Coping With Chaos in N Body Dynamical Systems This institute was the latest in a series of meetings held every three years from 1972 to 1990 in dynamical astronomy theoretical mechanics and celestial mechanics The proceedings from these institutes have been well

received in the international community of research workers in these disciplines The present institute was well attended with 15 series of lectures being given by invited speakers in addition some 40 presentations were made by the other participants The majority of these contributions are included in these proceedings The all pervading influence of chaos in dynamical systems of even a few variables has now been universally recognised by researchers a recognition forced on us by our ability using powerful computer hardware and software to tackle dynamical problems that until twenty five years ago were intractable Doubtless it was felt by many that these new techniques provided a break through in celestial mechanics and its related disciplines And so they were

Hamiltonian Mechanics John Seimenis, 2013-11-11 This volume contains invited papers and contributions delivered at the International Conference on Hamiltonian Mechanics Integrability and Chaotic Behaviour held in Toruń Poland during the summer of 1993 The conference was supported by the NATO Scientific and Environmental Affairs Division as an Advanced Research Workshop In fact it was the first scientific conference in all Eastern Europe supported by NATO The meeting was expected to establish contacts between East and West experts as well as to study the current state of the art in the area of Hamiltonian Mechanics and its applications I am sure that the informal atmosphere of the city of Toruń the birthplace of Nicolaus Copernicus stimulated many valuable scientific exchanges The first idea for this conference was carried out by Prof Andrzej J Maciejewski and myself more than two years ago during his visit in Greece It was planned for about forty well known scientists from East and West At that time participation of a scientist from Eastern Europe in an Organising Committee of a NATO Conference was not allowed But always there is the first time Our plans for such a small conference as a first attempt in the new European situation the

Europe without borders quickly passed away The names of our invited speakers authorities in their field were a magnet for many colleagues from all over the world *Novel ideas for accelerators, particle detection and data challenges at future colliders* Alessandro Tricoli, Patrizia Azzi, Petra Merkel, Vladimir Shiltsev, 2023-07-21
