Economic Policy And Climate Change Tradable Permits For Reducing Carbon Emissions:

Economic Policy and Climate Change Paul Koutstaal, 1997 Economic Policy and Climate Change focuses on the design implementation and consequences of a feasible system of tradable carbon permits to reduce greenhouse gas emissions within the context of the European Union Economic instruments are considered fundamental in reducing atmospheric pollution especially carbon dioxide emissions This important book outlines the design of an achievable system of tradable emission permits in the EU It considers the distribution of permits the problem of monitoring and enforcement and the possibility that the system might create a barrier to potential entrants to industry This is especially important because entry barriers will affect the whole economy and long term industry dynamics The analysis then extends to consider the use of tradable permits and taxes in the context of international cooperation on emissions reduction International agreements are examined within the framework of a second best two country model in which governments reduce emissions and raise revenue simultaneously The author concludes that it is not welfare maximizing to trade permits between countries if emission limits and side payments have not first been agreed This book will be of special interest to environmental economists environmentalists and policymakers *Implementing Domestic Tradable Permits for Environmental Protection* OECD, 2000-03-22 This book reviews the issues related to the implementation of domestic tradable permits systems in different areas air water land and in several OECD countries Domestic Transferable Permits for Environmental Management Design and Implementation OECD, 2001-06-15 This publication provides a systematic analysis of the various approaches challenges conditions and potential solutions relating to the design and introduction of domestic transferable permit schemes **China's Way to Carbon Emissions Reduction** Ying Shen, 2015-08-18 Now that the most recent scientific estimates have shown that China has become the world's largest source of greenhouse gas emissions China's influence on the world's environment and sustainable development highlights the importance of tailoring Chinese climate change law to conform with the requirements of international conventions and agreements on climate change This thorough analysis based on an examination of climate status legal background and current regulatory systems in China examines the potential role of different policy instruments in reducing carbon emissions in order to find an appropriate choice for China and recommends approaches to key issues for relevant authorities The author conducts a comprehensive and in depth study on the three mainstream environmental policy instruments used to control carbon emissions the cap and trade system the carbon tax and command and control regulations in a Chinese context She reviews China's current policies and elucidates how the issues of climate change and global warming call for social environmental economic and legal reforms in China especially in the areas of administrative law and property rights law Among the issues and topics covered are the following key issues on designing and implementing each of the three policy instruments the choice of regulatory instruments for carbon emissions reduction in a socialist market economy based on the discussion of market failure and government failure theories legal challenges from China's current

administrative legislation and the definition of carbon emissions entitlements practical effect of China's climate change policy at the national provincial and local levels effectiveness of China's implementation of its international obligations lessons learned from schemes implemented in the United States and Australia comparison of China's seven regional pilot emissions trading scheme ETS programmes with the well established EU ETS linkage between China's ETS and other ETSs from a global perspective and future direction of an emerging carbon market in China The analysis assesses the critical costs and benefits of each approach in the context of selected case studies taking legal literature in the field fully into account Given that the Chinese government is taking steps to reduce emissions by altering energy production and usage and is signalling a willingness to make similar commitments in a multilateral treaty it is very timely and important for lawmakers and scholars within and outside China to think about new and appropriate regulatory measures to respond to the crisis and plan for a sustainable future This study provides not only a useful benchmark for both China and other countries in formulating initiatives on enhancing climate protection but also details the global implications for governments and for international organizations concerned with the understanding between China and the rest of the world in the context of climate change mitigation

European Emissions Trading in Practice Stefano Clò, 2011 Emission markets are crucial both to provide the right incentives to reduce GHG emissions and to fund investments necessary for a transition to a low carbon world Emission markets however cannot achieve these objectives if inappropriately designed This book is a novel and fresh attempt to look at the real functioning of the EU Emission Trading Scheme and to assess its effectiveness and inconsistencies its positive and negative impacts on industrial and financial markets With the overall objective to improve its design and performance Carlo Carraro University of Venice Italy this important book has the great achievement of addressing a complicated and socially highly debated issue of how society could be given optimal incentives for emission reductions from a legal and economic perspective Moreover it not only addresses the various issues from a theoretical perspective but provides important empirical evidence on the working of emissions trading as well The book will undoubtedly have important lessons not only at

the theoretical level but also for policy makers interested in improving the effectiveness of emission trading schemes From the foreword by Michael Faure This unique and up to date book analyses the functioning of the European Emissions Trading Scheme ETS and assesses the extent to which relevant legislation has affected its capacity to promote cost effective reduction of European carbon emissions The author investigates whether inefficiency has been caused by both the ETS cap setting procedure and by the ETS relevant allocation rule as defined by Directive 2003 87 EC He then considers whether the new Directive 2009 29 EC which reforms the ETS institutional design is likely to improve the scheme s effectiveness by reducing the risk of carbon leakage which could potentially be a consequence of implementing a unilateral policy across the asymmetric political landscape of Europe This well documented book will appeal to researchers and postgraduate students in environmental law and environmental economics as well as policymakers within environment industry and economics and electric and industrial operators and stakeholders Environmental NGOs energy and environmental consulting groups members of the European Commission and energy and environmental think tanks will also find much to interest them in this insightful book
