*The Ecology of the New Economy* Jacob Park, Nigel Roome, 2017-09-08 A revolution is taking place in the development of global information and communications technologies In slightly more than a decade the World Wide Web has gone from the idea of an obscure English scientist to a consumer oriented technology system with an expected one billion users by 2005 The technologies that enable this to happen are advancing rapidly which is leading to both an unprecedented number of start up companies and a host of innovative new alliances between companies The growth has been so rapid and unexpected that little research and analysis has yet been done on what impact this transformation has had or will have on the ability of companies to meet the global sustainability challenge As environmental strategy has traditionally been portrayed in terms of risk cutting and resource efficiency there is a danger that critical business issues such as information technology R D and e commerce development are examined in isolation from the wider sustainable business perspective An important objective of the book is to explore document and raise awareness of sustainability concerns arising from the emerging global information economy The information economy is defined in the broadest sense possible including software hardware telecommunication traditional and wireless and advanced communication technologies Some of the key issues and questions that are examined include Case studies on how and to what degree sustainability concerns are being integrated into the business model of electronic telecommunication and dot com firms The relationship between the diffusion of information and communication technologies and the energy and resource intensity of companies The role of information and communication technologies in the shaping of policies for sustainability its impacts on sustainable or unsustainable lifestyles and its implications for the interaction between companies and other actors Corporations and the global digital divide The Ecology of the New Economy will be of interest to academics governments

businesses and non governmental groups who are trying to understand the linkages and relationship between the two of our greatest global challenges the information revolution and environmental sustainability *The Ecology of the New Economy* Nigel Roome, Jacob Park, 2001-07-08 This special issue sets out to provide a forum to stimulate discussion and to provoke further examination of information communication computing and electronic ICCE technologies and their impacts on society and the environment Real Estate and the New Economy Tim Dixon, Bob Thompson, Patrick McAllister, Andrew

Marston, Jon Snow, 2008-04-15 Private sector commercial property represents some 400 bn or 34% of total UK business assets and is a vital fabric for housing commercial enterprise Yet social and economic forces for change linked with new technology are making owners and occupiers question the very nature and purpose of property and real estate

Sustainable Production Glen Toner, 2011-11-01 The issues associated with sustainable production are among the most important facing the world in the early 21st century While most of the scholarship in this area has been produced in the United States and Europe not much has been written from a Canadian perspective Sustainable Production establishes a Canadian presence in the sustainable production debate by analyzing the opportunities and constraints facing both the public and private sectors as Canada strives to move public policy and industrial practice forward Sustainable production focuses on the systems by which industrial economies produce goods and services and the ways in which investment and production decisions are influenced by public policy One goal of sustainable production is to dematerialize production minimizing energy and material extraction and throughput per unit of economic output In its broader sense sustainable production should simultaneously improve environmental quality and social well being Sustainable production envisions an industrial system that would maximize resource efficiency minimize environmental impacts and replenish natural capital while providing safe and satisfying employment opportunities Sustainable Production will be of interest to scholars and students in business public policy and engineering to policy makers and to practitioners in firms and industry associations **From Resource**

in supply chains and transportation and possible solutions for more sustainable logistics systems      Implementing Triple Bottom Line Sustainability into Global Supply Chains Lydia Bals,Wendy Tate,2017-09-08 The global sustainability challenge is urgent tremendous and increasing From an ecological perspective the current worldwide resource footprint requires approximately 1 5 planets to sustain existing life and with current usage would require two planets by 2030 The social impact of ever growing resource use disproportionately affects the world s poor the 3 billion people living on less than 2 50 a day as they struggle to acquire what is needed to survive The serious ecological and social challenges we face in trying to establish global sustainable supply chains must not be underestimated yet so far research has largely ignored the social dimension in favour of the environmental and economic So how can we develop business strategies that move away from a primary economic focus and give equal weight to people planet and profit How can we create sustainable supply chains that take a true triple bottom line approach Implementing Triple Bottom Line Sustainability into Global Supply Chains features innovative research highlighting new cases approaches and concepts in how to successfully implement sustainability covering economic ecological and social dimensions into global supply chains The four parts cover the rationale for sustainable global supply chains key enablers case studies showing clear implementation steps and directions for future research and development This book is a must read for any academic researching in sustainable supply chain management procurement or business strategy and for business leaders seeking cases that will inform a critical step forward for CSR programmes      Environmental Change and Security Project Report ,2002      *The Crisis of Global Environmental Governance* Jacob Park,Ken Conca,Matthias Finger,2008-03-27 Taking a critical perspective and providing a comprehensive framework on globalization and governance this book examines what institutional mechanisms and arrangements will enable people to achieve sustainable environmental governance      *Unfolding Stakeholder Thinking* Jörg Andriof,Sandra Waddock,Bryan Husted,Sandra Sutherland Rahman,2017-09-08 This book the first of a two volume series argues that today stakeholder thinking has evolved into the study of interactive mutually engaged and responsive relationships that establish the very context of doing modern business and create the groundwork for transparency and accountability This book makes it clear that in today s societies successful companies are those that recognize that they have responsibilities to a range of stakeholders that go beyond mere compliance with the law or meeting the fiduciary responsibility inherent in maximizing returns to shareholders If in the past the focus was on enhancing shareholder value now it is on engaging stakeholders for long term value creation The process of engagement creates a dynamic context of interaction mutual respect dialogue and change not a one sided management of stakeholders Indeed the authors believe the very term stakeholder management to be outdated and corporate centric Companies can manage their relationships with stakeholders but frequently cannot actually manage the stakeholders themselves because as the activist and collaborative initiatives described in this volume suggest company stakeholder relationships are not one way streets and different institutions bring different agendas goals and

priorities to the engagement There are clear implications to the way in which stakeholder thinking is unfolding today If in the past corporate social responsibility was simply seen as profitability plus compliance plus philanthropy now responsible corporate citizenship or corporate responsibility means companies being more aware of and understanding the societies in which they operate Corporate responsibility means recognising that day to day operating practices affect stakeholders and that it is in those impacts where responsibility lies not merely in efforts to do good Companies are now faced with a wide array of challenges that mean that senior executives and managers need to be able to deal with issues including greater accountability human rights abuses sustainability strategies corporate governance codes workplace ethics stakeholder consultation and management Stakeholder thinking needs to capture these new realities The global reach of multinational corporations has served to highlight the need for the re integration of business into society relationships into stakeholder relations and ethics into managerial practice The rise in power of global activism involving NGOs and global business involving multinational corporations makes it even more critical today for companies to consider the power and interests of corporate stakeholders when developing strategic plans The interactivity and mutuality of relationships described in this book make it clear that firms and stakeholders share the power and responsibility to influence both the profit potential of the firm and how the benefits of the firm s success impact on society This important volume brings together leading academic thought on stakeholder thinking for the first time Unfolding Stakeholder Thinking will be indispensable to corporate managers NGOs and academics seeking greater understanding of the dynamics of stakeholder thinking in a world of rapidly changing responsibilities A companion volume Unfolding Stakeholder Thinking 2 focusing on practical issues such as relationship management communication reporting and performance is also available
