Lovett, Christian Albert, 2019-06-25 Human well being depends in many ways on maintaining the stock of natural resources which deliver the

services from which human s benefit However these resources and flows of services are increasingly threatened by unsustainable and competing land uses Particular threats exist to those public goods whose values are not well represented in markets or whose deterioration will only affect future generations As market forces alone are not sufficient effective means for local and regional planning are needed in order to safeguard scarce natural resources coordinate land uses and create sustainable landscape structures This book argues that a solution to such challenges in Europe can be found by merging the landscape planning tradition with ecosystem services concepts Landscape planning has strengths in recognition of public benefits and implementation mechanisms while the ecosystem services approach makes the connection between the status of natural assets and human well being more explicit It can also provide an economic perspective focused on individual preferences and benefits which helps validate the acceptability of environmental planning goals Thus linking landscape planning and ecosystem services provides a two way benefit creating a usable science to meet the needs of local and regional decision making The book is structured around the Driving forces Pressures States Impacts Responses framework providing an introduction to relevant concepts methodologies and techniques It presents a new ecosystem services informed approach to landscape planning that constitutes both a framework and toolbox for students and practitioners to address the environmental and landscape challenges of 21st century Europe

The Professional Practice of Environmental Management Robert S. Dorney, 2012-12-06 This series is dedicated to serving the growing community of scholars and practitioners concerned with the principles and applications of environmental management Each volume is a thorough treatment of a specific topic of importance for proper management practices A fundamental objective of these books is to help the reader discern and implement man s stewardship of our environment and the world s renewable resources For we must strive to understand the relationship between man and nature act to bring harmony to it and nurture an environment that is both stable and productive These objectives have often eluded us because the pursuit of other individual and societal goals has diverted us from a course of living in balance with the environment At times therefore the environmental manager may have to exert restrictive control which is usually best applied to man not nature Attempts to alter or harness nature have often failed or backfired as exemplified by the results of imprudent use of herbicides fertilizers water and other agents Each book in this series will shed light on the fundamental and applied aspects of environmental management It is hoped that each will help solve a practical and serious environmental problem

Democracy Randolph T. Hester, Jr.,2010-09-24 Shows how to combine the forces of ecological science and participatory democracy to design urban landscapes that enable us to act as communities are resilient rather than imperiled and touch our hearts Over the last fifty years the process of community building has been lost in the process of city building City and suburban design divides us from others in our communities destroys natural habitats and fails to provide a joyful context for our lives In Design for Ecological Democracy Randolph Hester proposes a remedy for our urban anomie He outlines new principles for urban design that will allow us to forge connections with our fellow citizens and our natural environment He demonstrates these principles with abundantly illustrated examples drawn from forty years of design and planning practice showing how we can design cities that are ecologically resilient that enhance community and that give us pleasure Hester argues that it is only by combining the powerful forces of ecology and democracy that the needed revolution in design will take place Democracy bestows freedom ecology creates responsible freedom by explaining our interconnectedness with all creatures Hester s new design principles are founded on three fundamental issues that integrate democracy and ecology enabling form resilient form and impelling form Urban design must enable us to be communities rather than zoning segregated enclaves and to function as informed democracies A simple bench at a centrally located post office for example provides an opportunity for connection and shared experience Cities must be ecologically resilient rather than ecologically imperiled adaptable to the surrounding ecology rather than dependent on technological fixes Resilient form turns increased urban density for example into an advantage And cities should impel us by joy rather than compel us by fear good cities enrich us rather than limit us Design for Ecological Democracy is essential reading for designers planners environmentalists community activists and anyone else who wants to improve a local community Ecological and Environmental Science &
