Econometric Modelling with Time Series Vance Martin,Stan Hurn,David Harris,2013 Maximum likelihood estimation is a general method for estimating the parameters of econometric models from observed data The principle of maximum likelihood plays a central role in the exposition of this book since a number of estimators used in econometrics can be derived within this framework Examples include ordinary least squares generalized least squares and full information maximum likelihood In deriving the maximum likelihood estimator a key concept is the joint probability density function pdf of the observed random variables yt Maximum likelihood estimation requires that the following conditions are satisfied 1 The form of the joint pdf of yt is known 2 The specification of the moments of the joint pdf are known 3 The joint pdf can be evaluated for all values of the parameters 9 Parts ONE and TWO of this book deal with models in which all these conditions are satisfied Part THREE investigates models in which these conditions are not satisfied and considers four important cases First if the distribution of yt is misspecified resulting in both conditions 1 and 2 being violated estimation is by quasi maximum likelihood Chapter 9 Second if condition 1 is not satisfied a generalized method of moments estimator Chapter 10 is required Third if condition 2 is not satisfied estimation relies on nonparametric methods Chapter 11 Fourth if condition 3 is violated simulation based estimation methods are used Chapter 12 1 2 Motivating Examples To highlight the role of probability distributions in maximum likelihood estimation this section emphasizes the link between observed sample data and 4 The Maximum Likelihood Principle the probability distribution from which they are drawn Provided by publisher   Introduction
