## **Geriatric Medicine For The Primary Care Giver:**

**Geriatric Medicine** Michael R. Wasserman, Debra Bakerjian, Sunny Linnebur, Sharon Brangman, Matteo Cesari, Sonja Rosen, 2024-02-19 Both volumes sold as a combined set for a one time purchase Older adults represent the most rapidly growing demographic in the U S and in many developed countries around the world The field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature Medicare and Medicaid expenditures related to older adults are nearly a trillion dollars year in the US How our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance According to the Institute of Medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine Geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life It is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about the geriatric approach to care Geriatric medicine varies from most other fields in medicine While many specialties function on the basis of evidence based literature geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants Geriatricians are used to caring for 90 year olds with multiple chronic illnesses Their variable physiology leads to uncertain responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care Practicing geriatric medicine requires the ability to see patterns But it goes one step further as the rules are constantly in flux Every patient is an individual with particular needs and goals In order to provide true person centered care to older adults one has to incorporate these factors into the decision making process The proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience Basic science and the physiology of aging create a background but are not the main focus This is because every chapter has been written through the lens of person centered care This book is about focusing on what matters to the person and how that is not always about pathology and physiology The reader generally will not find simple solutions to symptoms diseases and syndromes In fact the key to caring for geriatric patients is the ability to think both critically and divergently at the same time Geriatrics encompasses multiple disciplines and spans all of the subspecialties It requires knowledge of working within an interdisciplinary team It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary And most of all it requires a firm commitment to first learning who the person is so that all of the necessary data can be analyzed and integrated into a true person centered plan of care This book aims to serve as an unparalleled resource for meeting these challenges Updated and revised from the previous edition this text features over 40 new peer reviewed chapters new references and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine **Primary Care Geriatrics** Richard J.

Ham,2007-01-01 Accompanying CD ROM contains video learning modules on gait and balance and dizziness a dermatology quiz and downloadable cognitive assessment tools to hone clinical skills File formats include QuickTime movies PDFs and HTML documents

**New Directions in Geriatric Medicine** Lee Ann Lindquist,2016-04-09 This book is designed to present the clinical geriatric trends within general internal medicine and family practice which practitioners often encounter in caring for their older adult patients Chapters focus on increasingly difficult clinical decisions that practitioners have to make in caring for older adults who often experience medical complications due to memory loss physical disability and multiple chronic conditions Written by experts in geriatric medicine each of these chapters start with the most up to date clinical geriatric research and provide specific examples or case studies on how to use this information to address the clinical needs of older adult patients In addition there is a set of concise take home points for each chapter that are easy to commit to memory and implement in clinical care of aging patients As the only book to focus on current trends in geriatric research and evidence based eldercare practice Clinical Trends in Geriatric Medicine is of great value to internists family practitioners geriatricians nurses and physician assistants who care for older adults

**Geriatric Medicine** C.K. Cassel,J.R. Walsh,2012-12-06 With the appearance of a textbook as comprehensive as this one it is clear that the field of geriatrics is coming of age The broad scope of these volumes shapes a substantial answer to the question What is geriatrics and why should we be interested in it As I see it there are at least five reasons First the scientific or intellectual reason gerontology is the study of aging from the biologic psychological and social perspectives There is increasing interest in the fascinating insights into the biologic mechanisms of aging errors in protein synthesis DNA repair mechanisms alterations of the neuroendocrine system changes in the immune system genetic controls and somatic mutations Second the demographic reason this is the century of old age There has been a 26 year gain in the average life expectancy This gain compares with that acquired from 3 000 years B C the Bronze Age to the year 1900 which was about 29 years Therefore in one century there has been a gain in the average life expectancy almost equal to 5 000 previous years of human history In 1830 one of three newborn infants survived beyond 60 years of age

**Integrative Geriatric Medicine** Mikhail Kogan,2017-11-24 Integrative geriatrics is a new field of medicine that advocates for a whole person patient centered primarily non pharmacological approach to medical care of the elderly Most current geriatric practices overprescribe medications and procedures and underutilize non pharmacological low cost high touch methods Patients however often show reluctance towards these standard practices as the interventions they rely upon are often invasive The practice of integrative geriatrics is rooted in lifestyle interventions such as nutrition movement therapies and mind body and spirituality approaches that allow patients to have different path to their healthcare one that utilizes pharmaceuticals and invasive procedures only when safer integrative approaches are not available or not effective This first definitive textbook of this new field presents detailed evidence based information for all healthcare providers and advocates who work with geriatric population It is intended not

only for providers in outpatient settings but also to those who work in nursing homes assisted and independent living facilities and senior community centers In addition Integrative Geriatric Medicine will provide valuable information for leaders and politicians who are involved with implementing policies and procedures for care of elderly patients looking for safer less costly and more patient centered approaches Geriatric Medicine Christine K. Cassel, Rosanne Leipzig, Harvey Jay Cohen, Eric B. Larson, Diane E. Meier, 2006-05-29 Since the publication of the third edition of Geriatric Medicine extraordinary advances have occurred in the science of aging and the potential for biomedical research to give us answers to many if not most of the age related disorders that threaten the quality of life in older years At the most basic level the successful mapping of the human genome was declared complete in the fall of 2000 Understanding the map of the human genome is as important as understanding the map of genomes of important laboratory species ranging from the microscopic worms and fruit flies used in most classic genetic studies to rodents such as laboratory mice and eventually to primates on which much of the research on the aging human brain is done The genetic maps of all of these species including our own does not answer clinical questions but it does open the door to dramatic rapid and efficient answers to questions about the genetic polymorphisms related to diseases in humans The telomerase story also unfolded since the third edition Telomerase is an enzyme responsible for maintaining the telomeres the redundant DNA portions at the end of chromosomes whose shortening seems to be linked directly to cell senescence apoptosis and the control over cell death which at the level of the individual cell seems to be linked to the decline of organ function and eventually aging and death within the organism
