Problems in Geriatric Medicine A. Martin, 2012-12-06 The fact that there are special problems in the care of the elderly in the community is ample justification for writing a separate volume on the subject The knowledge that there are increasing numbers of older people in virtually every country in the world makes it all the more important that the family physician should have sympathy with and understanding of the problems of them since they are likely to make up a significant part of his workload and increasingly will take up more of his time and energy There is a progressive amount of disability with advancing years and this is particularly true of those aged 75 years and over Increasing age is associated with serious impairment of hearing and vision senses which younger people take for granted Old age sees the arrival of major diseases of middle age with much greater frequency such as ischaemic heart and cerebrovascular disease diabetes mellitus and osteoarthritis There are other disorders that are virtually confined to the elderly such as fractures of the femoral neck Paget s disease and myeloma We now know that the disintegration of the conducting tissue of the heart is largely an age related phenomenon Ageing processes affect every major organ system in the body and the impairment of physiological performance resulting from these affects the elderly individual s response to infections disease and environmental changes in complex ways that are not seen in younger people

*Geriatric Problems in General Practice* Gordon K. Wilcock, John Armstrong Muir Gray, J. Murray Longmore, 1991 In this second edition many new chapters have been added to address the evolving health care concerns of elderly persons These chapters examine the objectives of geriatric medicine and its ethical dilemmas the aging mind and its effects on family members and physicians

and the organization of effective geriatric health care services The book continues to provide a comprehensive reference for all those who see treat and support the elderly in their home **Geriatric Medicine** Christine K. Cassel, Rosanne Leipzig, Harvey Jay Cohen, Eric B. Larson, Diane E. Meier, 2006-05-29 Since the publication of the third edition of Geriatric Medicine extraordinary advances have occurred in the science of aging and the potential for biomedical research to give us answers to many if not most of the age related disorders that threaten the quality of life in older years At the most basic level the successful mapping of the human genome was declared complete in the fall of 2000 Understanding the map of the human genome is as important as understanding the map of genomes of important laboratory species ranging from the microscopic worms and fruit flies used in most classic genetic studies to rodents such as laboratory mice and eventually to primates on which much of the research on the aging human brain is done The genetic maps of all of these species including our own does not answer clinical questions but it does open the door to dramatic rapid and efficient answers to questions about the genetic polymorphisms related to diseases in humans The telomerase story also unfolded since the third edition Telomerase is an enzyme responsible for maintaining the telomeres the redundant DNA portions at the end of chromosomes whose shortening seems to be linked directly to cell senescence apoptosis and the control over cell death which at the level of the individual cell seems to be linked to the decline of organ function and eventually aging and death within the organism

**Geriatric Medicine** C.K. Cassel, J.R. Walsh, 2012-12-06 With the appearance of a textbook as comprehensive as this one it is clear that the field of geriatrics is coming of age The broad scope of these volumes shapes a substantial answer to the question What is geriatrics and why should we be interested in it As I see it there are at least five reasons First the scientific or intellectual reason gerontology is the study of aging from the biologic psychological and social perspectives There is increasing interest in the fascinating insights into the biologic mechanisms of aging errors in protein synthesis DNA repair mechanisms alterations of the neuroendocrine system changes in the immune system genetic controls and somatic mutations Second the demographic reason this is the century of old age There has been a 26 year gain in the average life expectancy This gain compares with that acquired from 3 000 years B C the Bronze Age to the year 1900 which was about 29 years Therefore in one century there has been a gain in the average life expectancy almost equal to 5 000 previous years of human history In 1830 one of three newborn infants survived beyond 60 years of age Issues in Geriatric Medicine and Aging Research: 2011 Edition, 2012-01-09 Issues in Geriatric Medicine and Aging Research 2011 Edition is a ScholarlyEditions eBook that delivers timely authoritative and comprehensive information about Geriatric Medicine and Aging Research The editors have built Issues in Geriatric Medicine and Aging Research 2011 Edition on the vast information databases of ScholarlyNews You can expect the information about Geriatric Medicine and Aging Research in this eBook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Issues in Geriatric Medicine and Aging Research 2011 Edition has been produced by the world's leading scientists engineers
