Committee on Science and Technology. Subcommittee on Science, Research, and Technology, 1986 The Environment as Hazard Ian Burton, 1993-04-09 The Environment as Hazard offers an understanding of how people around the world deal with dramatic

fluctuations in the local natural systems of air water and terrain Reviewing recent theoretical and methodological changes in the investigation of natural hazards the authors describe how research findings are being incorporated into public policy particularly research on slow cumulative events technological hazards the role played by social systems and the relation of hazards theory to risk analysis Through vivid examples from a broad sample of countries this volume illuminates the range of experiences associated with natural hazards The authors show how modes of coping change with levels of economic development by contrasting hazards in developing countries with those in high income countries comparing the results of hurricanes in Bangladesh and the United States and earthquakes in Nicaragua and California In new introductory and concluding chapters that supplement the original text the authors present new global data sets as well as a trenchant discussion of implications of hazards research for the International Decade for Natural Disaster Reduction and for attempts by the world community to come to grips with the threats of climate change

A Framework for Analyzing Technical Trade Barriers in Agricultural Markets Donna H. Roberts, 1999 **Energy Abstracts for Policy Analysis**, 1988

Complete Catalog of Books and Periodicals National Academy Press (U.S.), 1990 **Elements of Controversy** Barton C. Hacker, 1994-01-01 Unforgettable congressional hearings in 1978 revealed that fallout from American nuclear weapons testing in the 1950s had overexposed hundreds of soldiers and other citizens to radiation Faith in governmental integrity was shaken and many people have assumed that such overexposure caused great damage Yet important questions remain the most controversial being did the radiation overexposure in fact cause the cancers and birth defects for which it has been blamed **Elements of Controversy** is the result of a decade of exhaustive research in AEC documentary records and the full clinical and epidemiological literature on radiation effects More concerned with uncovering the historical story than with assigning blame Barton Hacker concludes that every precaution was taken by the AEC to avoid harming test participants or bystanders And he points out the biomedical literature suggests that these precautions worked Yet top officials in Washington for whom the success of nuclear weapons was of overriding importance had asserted that testing involved no risks at all Discrepancies between unverifiable government claims and the revelations that some actual risk was present explain the origins and angry persistence of the controversies Hacker argues The Department of Energy delayed publication of Hacker's study for five years and while his controversial book is sure to draw objections from both sides of the radiation hazard debates it will provide a much needed guide to understanding their polemics Unforgettable congressional hearings in 1978 revealed that fallout from American nuclear weapons testing in the 1950s had overexposed hundreds of soldiers and other citizens to radiation Faith in governmental integrity was shaken and many people have assumed that such overexposure caused great damage Yet important questions remain the most controversial being did the radiation overexposure in fact cause the cancers and birth defects for which it has been blamed **Elements of Controversy** is the result of a decade of exhaustive research in AEC documentary records and the full clinical and epidemiological literature on

radiation effects More concerned with uncovering the historical story than with assigning blame Barton Hacker concludes that every precaution was taken by the AEC to avoid harming test participants or bystanders And he points out the biomedical literature suggests that these precautions worked Yet top officials in Washington for whom the success of nuclear weapons was of overriding importance had asserted that testing involved no risks at all Discrepancies between unverifiable government claims and the revelations that some actual risk was present explain the origins and angry persistence of the controversies Hacker argues The Department of Energy delayed publication of Hacker s study for five years and while his controversial book is sure to draw objections from both sides of the radiation hazard debates it will provide a much needed guide to understanding their polemics

Hazardous Waste Siting and Democratic Choice Don Munton,1996 This volume analyzes the politics of hazardous waste siting and explores promising new strategies for siting facilities Existing approaches to waste siting facilities have almost entirely failed across all industrialized countries largely because of community or NIMBY Not in My Backyard opposition This volume examines a new strategy voluntary choice siting a process requiring mutual decisions negotiated between facility developers and the host communities This bottom up approach preserves democratic rights recognizes the importance of public perceptions and addresses issues of equity In this collection an interdisciplinary group of experts probes recent examples of waste facilities siting in the United States Canada Germany and Japan Both the successes and the failures presented offer practical insights into the siting process The book includes an introductory review of the literature on facility siting and the NIMBY phenomenon as well as instructive essays on the use of voluntary processes in facilities siting This book will be of value to policymakers industry and environmental groups as well as to those working in environmental studies and engineering political science public health geography planning and business economics

New Risks: Issues and Management Louis A. Cox,Paolo F. Ricci,2013-06-29 This volume contains the proceedings of the 1986 annual meeting and conference of the Society for Risk Analysis It provides a detailed view of both mature disciplines and emerging areas within the fields of health safety and environmental risk analysis as they existed in 1986 In selecting and organizing topics for this conference we sought both i to identify and include new ideas and application areas that would be of lasting interest to risk analysts and to users of risk

analysis results and ii to include innovative methods and applications in established areas of risk analysis In the three years since the conference many of the topics presented there for the first time to a broad risk analysis audience have become well developed and sometimes hotly debated areas of applied risk research Several such as the public health hazards from indoor air pollutants radon in the home high voltage electric fields and the AIDS epidemic have been the subjects of headlines since 1986 Older areas such as hazardous waste site ranking and remediation air emissions dispersion modeling and exposure assessment transportation safety seismic and nuclear risk assessment and occupational safety in the chemical industry have continued to receive new treatments and to benefit from advances in quantitative risk assessment methods as documented in the theoretical and methodological papers in this volume A theme of the meeting was the importance of new technologies and the new and uncertain risks that they create *Acceptable Evidence* Deborah G. Mayo, Rachelle D.

Hollander, 1994-02-17 Discussions of science and values in risk management have largely focused on how values enter into arguments about risks that is issues of acceptable risk Instead this volume concentrates on how values enter into collecting interpreting communicating and evaluating the evidence of risks that is issues of the acceptability of evidence of risk By focusing on acceptable evidence this volume avoids two barriers to progress One barrier assumes that evidence of risk is largely a matter of objective scientific data and therefore uncontroversial The other assumes that evidence of risk being just a matter of values is not amenable to reasoned critique Denying both extremes this volume argues for a more constructive conclusion understanding the interrelations of scientific and value issues enables a critical scrutiny of risk assessments and better public deliberation about social choices The contributors distinguished philosophers policy analysts and natural and social scientists analyze environmental and medical controversies and assumptions underlying views about risk assessment and the scientific and statistical models used in risk management **Drought and the Human Story** R.L.

Heathcote, 2016-05-13 Drought has been a long companion in the human story Mythologised as the devastating Bull of Heaven in one of the earliest heroic legends to come out of Mesopotamia drought has continued to wreak havoc upon societies in many cases playing a significant role in their final demise For societies in the 21st Century drought hovers on all horizons the ultimate drought proofing of society long sought remains elusive This study of the human conceptualization of drought in a global setting examines the historical record from early human society through to present day concerns to explore how and why attitudes to drought have changed and why the mitigation of its impacts has become more difficult To offer a more lasting strategy for protection against drought the author argues that physical scientists need to combine their skills in understanding global ecology and their technological expertise with the social scientists awareness of the socio economic political and cultural contexts in which modern societies operate Both will have to ensure that their cooperative strategies for drought management will be understood and supported by the public If this cooperation can be achieved the future rampages of the Bull of Heaven may be contained **Corporate Management Of Health And Safety Hazards**

Roger E. Kasperson, 2019-04-09 This book provides one of the first systematic accounts of how corporations manage risk to workers and consumers. Careful analysis and interviewing in different corporations elicit a portrait of the myriad hazards that currently confront industry, the corporate programs and resources that have emerged since 1970 to respond to this challenge, and factors that have contributed to successes and failures. In-depth studies of the Volvo Car Corporation, Rocky Flats nuclear weapons plant, Union Carbide's Bhopal facility, and large chemical and pharmaceutical corporations provide a state-of-the-art assessment of the advances and problems inherent today in industrial safety management.

Roger E. Kasperson and Jeanne X. Kasperson and Christoph Hohenemser are senior researchers at Clark University's Center for Technology, Environment, and Development (CENTED). Roger E. Kasperson is Director of CENTED and its Hazard Assessment Group. Jeanne X. Kasperson is Research Librarian at CENTED and Senior Research Associate in Brown University's World Hunger Program. Hohenemser, a professor of physics, directs the Environment, Technology, and Society Program at Clark University. Robert W. Kates, formerly with CENTED, is Director of the Alan Shawn Feinstein World Hunger Program at Brown University.
