**Critical Care Ethics** David F. Kelly, 2002-06-11 In Critical Care Ethics David F Kelly describes and analyzes some of the major ethical issues facing American hospitals today and proposes practical approaches by which hospitals may ethically and legally resolve them The author includes both theory and application in a way which insures accessibility to those without a background in moral philosophy or moral theology The book s major emphasis is on the resolution within the American hospital of the practical question of forgoing treatment Its central thesis is that a consensus has arisen in American medical ethics concerning the ethical and legal rightness of forgoing medical treatment in some circumstances The present consensus is based on three pillars The first two of these are ethical principles and distinctions arising from Catholic medical ethics which have been generally accepted in American hospital ethics and American law The third is the development of American law itself Together these three bases have resulted in general agreement that Americans have the right to refuse treatment for themselves and that with some reservations they have the right to forgo treatment for others as well These issues are developed in detail including application to the question of medical nutrition and analysis of the decision In addition there are chapters on pain pain management ethics committees and the problems of resource allocation The final chapter attempts to point out some of the difficulties inherent in allocation arguments and criticizes the way in which they are so often made by many ethicists and religious leaders

**Allocating Scarce Medical Resources** H. Tristram Engelhardt Jr., Mark J. Cherry, 2002-05-20 Roman Catholic moral theology is the point of departure for this multifaceted exploration of the challenge of allocating scarce medical resources The volume begins its exploration of discerning moral limits to modern high technology medicine with a consensus statement born of the conversations among its contributors The seventeen essays use the example of critical care because it offers one of the few areas in medicine where there are good clinical predictive measures regarding the likelihood of survival As a result the health care industry can with increasing accuracy predict the probability of saving lives and at what cost Because critical care involves hard choices in the face of finitude it invites profound questions about the meaning of life the nature of a good death and distributive justice For those who identify the prize of human life as immortality the question arises as to how much effort should be invested in marginally postponing death In a secular culture that presumes that individuals live only once and briefly there is an often unacknowledged moral imperative to employ any means necessary to postpone death The conflict between the free choice of individuals and various aspirations to equality compounds the challenge of controlling medical costs while also offering high tech care to those who want its possible benefits It forces society to confront anew notions of ordinary versus extraordinary and proportionate versus disproportionate treatment in a highly technologically structured social context This cluster of discussions is enriched by five essays from Jewish Orthodox Christian and Protestant perspectives Written by premier scholars from the United States and abroad these essays will be valuable reading for students and scholars of bioethics and Christian moral theology
