Embodied Conversational Agents Justine Cassell, 2000 This book describes research in all aspects of the design implementation and evaluation of embodied conversational agents as well as details of specific working systems Embodied conversational agents are computer generated cartoonlike characters that demonstrate many of the same properties as humans in face to face conversation including the ability to produce and respond to verbal and nonverbal communication They constitute a type of a multimodal interface where the modalities are those natural to human conversation speech facial displays hand gestures and body stance b software agent insofar as they represent the computer in an interaction with a human or represent their human users in a computational environment as avatars for example and c dialogue system where both verbal and nonverbal devices advance and regulate the dialogue between the user and the computer With an embodied conversational agent the visual dimension of interacting with an animated character on a screen plays an intrinsic role Not just pretty pictures the graphics display visual features of conversation in the same way that the face and hands do in face to face conversation among humans This book describes research in all aspects of the design implementation and evaluation of embodied conversational agents as well as details of specific working systems Many of the chapters are written by multidisciplinary teams of psychologists linguists computer scientists artists and researchers in interface design The authors include Elisabeth Andre Norm Badler Gene Ball Justine Cassell Elizabeth Churchill James Lester Dominic Massaro Cliff Nass Sharon Oviatt Isabella Poggi Jeff Rickel and Greg Sanders *Handbook of Virtual Humans* Nadia

Magnenat-Thalmann, Daniel Thalmann, 2005-10-31 Virtual Humans are becoming more and more popular and used in many applications such as the entertainment industry in both film and games and medical applications This comprehensive book covers all areas of this growing industry including face and body motion body modelling hair simulation expressive speech simulation and facial communication interaction with 3D objects rendering skin and clothes and the standards for Virtual Humans Written by a team of current and former researchers at MIRALab University of Geneva or VRlab EPFL this book is the definitive guide to the area Explains the concept of avatars and autonomous virtual actors and the main techniques to create and animate them body and face Presents the concepts of behavioural animation crowd simulation intercommunication between virtual humans and interaction between real humans and autonomous virtual humans Addresses the advanced topics of hair representation and cloth animation with applications in fashion design Discusses the standards for Virtual Humans such as MPEG 4 Face Animation and MPEG 4 Body Animation **Pervasive Computing**

Ichalkaranje,2008-09-03 In this book various aspects of cognitive and emotional behaviour is described In chapter one a state of the art introduction to VH is presented and the associated research is given In Chapter 2 cognitive and emotions processes are described A Comprehensive context model for multi party interactions with the VH is given in the next chapter Finally it is very important to model the socializing of groups of virtual humans This is discussed in Chapter 4 The automatic modelling of expressions for VH is described in Chapter 5 The last chapter gives a case study of an intelligent kios avatar and its usability This book gives examples of some advances that enable VH to behave intelligently It provides an overview of these research problems and some unsolved problems *Applied Physics, System Science and Computers III* Klimis

Ntalianis,George Vachtsevanos,Pierre Borne,Anca Croitoru,2019-06-27 This book reports on advanced theories and methods in three related fields of research applied physics system science and computers The first part covers applied physics topics such as lasers and accelerators fluid dynamics optics and spectroscopy among others It also addresses astrophysics security and medical and biological physics The second part focuses on advances in computers such as those in the area of social networks games internet of things deep learning models and more The third part is especially related to systems science covering swarm intelligence smart cities complexity and more Advances in and application of computer communication artificial intelligence data analysis simulation and modeling are also addressed The book offers a collection of contributions presented at the 3rd International Conference on Applied Physics System Science and Computers APSAC held in Dubrovnik Croatia on September 26 28 2018 Besides presenting new methods it is also intended to promote collaborations between different communities working on related topics at the interface between physics computer science and engineering

Modelling Machine Emotions for Realizing Intelligence Toyooki Nishida,Colette Faucher,2010-06-21 Emotion connects the thought to the body which is a magnificent biological vice for sensing and affecting the world The thought controls the body through emotions The body affects the thought through emotions Through this mechanism the thought allows the agent to behave intelligently in the complex world filled with a huge amount of dynamic information The emotion maps a flux of information into a space which the agent is familiar with enabling her him to associate ongoing events with past experiences which help to reduce complexity by providing with a nominal solution Recent findings in brain science suggest that mirror neurons map visual signals into motor signals for the body This mechanism might permit one to experience the emotion of the other agent just by feeling the motor signals caused by mirror neurons as a result of visual stimuli caused by the other agent s emotional behaviours In particular it might play a significant role in invoking empathy in a social situation It may not be hard to think about what might happen to emotion less machines The emotion less machines may not be able to accumulate experiences to avoid serious failures They may not be able to communicate with the humans in an empathetic way **From**

**Brows to Trust** Zsófia Ruttkay, Catherine Pelachaud, 2006-02-19 Embodied conversational agents ECAs are autonomous software entities with human like appearance and communication skills These agents can take on a number of different roles for example as an assistant tutor information provider or customer service agent They may also simply represent or entertain a user The precise nature and benefits of different characteristics of ECAs requires careful investigation Questions range from the function of an eyebrow raise to mechanisms for assessing and improving ECA trustworthiness This book will help experts and designers in the specification and development of applications incorporating ECAs Part 1 provides guidelines for evaluation methodologies and the identification of design and evaluation parameters Part 2 demonstrates the importance of considering the user s perspective and interaction experience Part 3 addresses issues in fine tuning design parameters of ECAs and verifying the perceived effect Finally in Part 4 lessons learned from a number of application case studies are presented The book is intended for both ECA researchers in academia and industry and developers and designers interested in applying the technology

Your Virtual Butler Robert Trappl,2013-03-12 In most scenarios of the future a personalized virtual butler appears This butler not only performs communication and coordination tasks but also gives recommendations on how to handle everyday problems The aim of this book is to explore the prerequisites of such a personalized virtual butler by asking what is known about the capacities and the needs of aging people which information and communication technologies have been used in assisting conversing with persons especially older ones and what were the results what are the advantages disadvantages of virtual butlers as mainly software programs compared robots as butlers and which methods especially in artificial intelligence have to be developed further and in which direction in order to create a virtual butler in the foreseeable future

*XII Mediterranean Conference on Medical and Biological Engineering and Computing 2010* Nicolas Pallikarakis,Panagiotis D. Bamidis,2010-05-28 Over the past three decades the exploding number of new technologies and applications introduced in medical practice often powered by advances in biosignal processing and biomedical imaging created an amazing account of new possibilities for diagnosis and therapy but also raised major questions of appropriateness and safety The accelerated development in this field alongside with the promotion of electronic health care solutions is often on the basis of an uncontrolled diffusion and use of medical technology The emergence and use of medical devices is multiplied rapidly and today there exist more than one million different products available on the world market Despite the fact that the rising cost of health care partly resulting from the new emerging technological applications forms the most serious and urgent problem for many governments today another important concern is that of patient safety and user protection issues that should never be compromised and expelled from the Biomedical Engineering research practice agenda
