The butterflyfishes: success on the coral reef Philip J. Motta, 2012-12-06

Butterflyfishes of the family Chaetodontidae are conspicuous members of almost all tropical reefs. These colorful fishes have attracted a great deal of attention from both the scientific community and especially the aquarium fish industry. At first one is tempted to say that butterflyfishes are abundant worldwide but the evidence does not support this statement. The biomass of chaetodontids on reefs may range from 0.02 to 0.80% and in terms of numbers they comprise only 0.04 to 0.61 % of the individuals on the reef. Yet in spite of these relatively small numbers they have been extensively studied. A quick census shows some 170 articles on or about butterfly fishes with 78% of them being published since the 1970s. Along with the cichlids and damselfishes they might be one of the most studied and well published family of tropical fishes. Why then have chaetodontids attracted so much attention? The butterflyfishes are mostly shallow water inhabitants that are approachable and easily recognizable making their study very feasible. Their bright coloration has provoked many hypotheses but has posed more questions about coloration than it has provided answers. And despite their apparent overall morphological similarity their highly structured and varied social systems have made them an ideal model for such studies. The reasons for choosing these organisms are indeed as diverse as the studies themselves.

An Integrated Assessment of the Introduction of Lionfish (*Pterois Volitans/miles* Complex) to the Western Atlantic Ocean Jonathan A. Hare, 2003. Lionfish *Pterois volitans miles* complex are venomous coral reef fishes from the Indian and western Pacific oceans that are now found in the western Atlantic Ocean. Adult lionfish have been observed from Miami, Florida to Cape Hatteras, North Carolina and juvenile lionfish have been observed off North Carolina, New York and Bermuda. The large number of adults observed and occurrence of juveniles indicate the lionfish are established and reproducing along the southeast United States coast. Executive summary.
