Principles of Food Processing

Richard W Hartel, Dennis R. Heldman, 2012-12-06 The approach to teaching the concepts of food processing to the undergraduate food science major has evolved over the past 40 years In most undergraduate food science curricula food processing has been taught on a commodity basis In many programs several courses dealt with processing with emphasis on a different commodity such as fruits and vegetables dairy products meat products and eggs In most situations the emphasis was on the unique characteristics of the commodity and very little emphasis on the common elements associated with processing of the different commodities Quite often the undergraduate student was allowed to select one or two courses from those offered in order to satisfy the minimum standards suggested by the Institute of Food Technologists The current IFIT minimum

standards suggest that the undergraduate food science major be required to complete at least one food processing course

The description of this course is as follows One course with lecture and laboratory which covers general characteristics of raw food materials principles of food preservation processing factors that influence quality packaging water and waste

management and sanitation Prerequisites general chemistry physics and general microbiology
