Food Systems Evaluation Methods and Sustainability Assessment Bradley George Ridoutt,Aida Turrini,2024-03-08 The food system is responsible for some of society s most pressing sustainability challenges Diets are currently unsustainable in many countries as evidenced by the growing burden of malnutrition degradation of natural resources contributions to climate change and unaffordability of healthy diets There is an

urgent need to address the gaps in understanding of what a sustainable food system means across varying populations and geographies and how we can better measure these systems while identifying how dietary choices impact on human health and the environment. However, decision makers and experts are questioning whether it is possible to meet environmental, social, and economic goals simultaneously or whether trade offs are necessary. Thus, the development of better measurements and indicators to clearly understand the benefits and considerations for healthy and sustainable food systems is needed.

Introduction to the US Food System Roni Neff, 2014-10-08. A public health approach to the US food system. Introduction to the US Food System: Public Health, Environment, and Equity is a comprehensive and engaging textbook that offers students an overview of today's US food system with particular focus on the food system's interrelationships with public health, the environment, equity, and society. Using a classroom-friendly approach, the text covers the core content of the food system and provides evidence-based perspectives reflecting the tremendous breadth of issues and ideas important to understanding today's US food system. The book is rich with illustrative examples, case studies, activities, and discussion questions. The textbook is a project of the Johns Hopkins Center for a Livable Future (CLF) and builds upon the Center's educational mission to examine the complex interrelationships between diet, food, production, environment, and human health to advance an ecological perspective in reducing threats to the health of the public and to promote policies that protect health, the global environment, and the ability to sustain life for future generations. Issues covered in Introduction to the US Food System include food insecurity, social justice, community and worker health, concerns, food marketing, nutrition, resource depletion, and ecological degradation. Presents concepts on the foundations of the US food system: crop production, food system economics, processing and packaging, consumption and overconsumption, and the environmental impacts of food. Examines the political factors that influence food and how it is produced. Ideal for students and professionals in many fields, including public health, nutritional science, nursing, medicine, environment, policy, business, and social science, among others. Introduction to the US Food System presents a broad view of today's US food system in all its complexity and provides opportunities for students to examine the food system's stickiest problems and think critically about solutions.

Handbook of Applied System Science Zachary Neal, 2016-11-25. The Handbook of Applied System Science is organized around both methodological approaches in systems science and the substantive topic to which these approaches have been applied. The volume begins with an essay that introduces three system science methods: agent-based modeling, system dynamics, and network analysis. The remainder of the volume is organized around three broad topics: 1. health and human development, 2. environment and sustainability, and 3. communities and social change. Each part begins with a brief introductory essay and includes nine chapters that demonstrate the application of system science methods to address research questions in these areas. This handbook will be useful for work in Public Health, Sociology, Criminal Justice, Social Work, Political Science, Environmental Studies, Urban Studies, and Psychology. Chapter 14 of this book is freely available as a downloadable Open

In HACCP User's Manual you find expert tips for getting started, details on how to develop and implement a HACCP plan, and how to operate the HACCP system, including organization of record keeping techniques.

Planning Sustainable and Resilient Food Systems Julia Freedgood, 2024-07-26 Covid-19 was a canary in a mine. It exposed the vulnerabilities of 21st century food systems but did not create them. Since then, the world has faced a polycrisis: a cluster of weather-related crop failures, war-induced food and energy shortages, and import dilemmas with compounding effects. Going forward, we need to plan for more sustainable and resilient food systems that improve environmental outcomes and address economic disparities. But food systems planning is a relatively new discipline and guidance is scarce. This book fills that gap. Where most food systems planning has focused on urban issues, this book takes a holistic view to include rural communities and production agriculture, whose stewardship of the earth is so critical to public and environmental health as well as to ensuring a varied and abundant food supply. Its goal is to inform planning practices and follow-up actions for a wide range of audiences: from professional planners, planning commissions and boards to conservation districts and Cooperative Extension to the on-the-ground change makers working to strengthen America's food and farming systems. Embracing the fact that the U.S. is highly diverse in its people, places, and politics, the book lifts up principles and successful examples to help communities develop strategies based on their unique assets and the needs and preferences of their people.

Rethinking our food systems: A guide for multi-stakeholder collaboration United Nations Environment Programme, Food and Agriculture Organization of the United Nations, United Nations Development Programme, 2023-06-21 Multi-stakeholder collaboration is an important process that can serve as a tool and strategy to solve complex issues and problems such as transforming national food systems towards more sustainable outcomes. This guide aims to support stakeholders working at all levels of the food system in the implementation of actions to transform their food systems. Centered on 5 building blocks underpinning successful multi-stakeholder collaboration for food systems transformation, the guide uses these constructions to illustrate ingredients of the process and show the interconnectedness of the steps needed to be successful. The guide also contains two annexes with a list of tools and assessment questions. Annex 1 highlights a range of tools to support facilitators and participants with deeper guidance on a specific topic. Annex 2 contains a checklist of questions customized to the content.

The SDGs and food system challenges: Global trends and scenarios toward 2030

,2024-02-12 Progress toward reducing global hunger has stalled since the mid 2010s In fact hunger is on the rise again driven by slowing economic growth and protracted conflict intensified by the impacts of climate change and economic shocks in many low and middle income countries In addition food systems worldwide have suffered disruptions in recent years caused by the COVID 19 related global recession and associated supply chain disruptions and exacerbated by the war in Ukraine These factors have also jeopardized efforts at addressing the challenges to food system sustainability The 2030 Agenda for Sustainable Development and the related sustainable development goals SDGs defined in 2015 recognize these challenges and set ambitious targets to end hunger and all forms of malnutrition and to make agriculture and food systems sustainable by 2030 Many other fora have restated and reiterated these ambitions including the 2021 United Nations Food System Summit UNFSS While governments around the world have subscribed to these ambitions collectively they have not been very specific as to how to achieve the SDGs and related goals and targets except for three means of implementation MOI involving i increases in research and development ii reductions in trade distortions and iii improved functioning and reduced volatility in food markets This paper is part of a wider effort at assessing the international community s follow through on the above ambitions and the related implicit or explicit commitments made toward action for achieving them While not presenting new research findings we bring together available evidence and scenario analyses to assess the progress made toward the ambitions for transforming food systems the actions taken in regard of the internationally concerted agenda and the potential for accelerating progress The number of hungry people in the world has risen from 564 million in 2015 when the SDGs were agreed to 735 million in 2022 While declines to between 570 and 590 million by 2030 are projected this is far above the 470 million projected in the absence of the COVID 19 pandemic and the Ukraine war The share of the world s people unable to afford healthy diets is projected to decline from 42 percent in 2021 to a still far too high 36 percent by 2030 On the means of implementation levels of spending on agricultural research and development have increased particularly in key developing countries such as Brazil China and India However rates of investment remain too low for comfort particularly in low income countries Also little progress has been made in reducing agricultural trade distortions and many countries continue to use trade policy measures such as export restrictions which have proven to increase the volatility of both world and domestic food prices We conclude that progress toward the SDG 2 targets has been dismal and that the food system challenges have only become bigger But we also find that it is not too late to accelerate progress and that the desired food system transformation can still be achieved over a reasonable timespan and at manageable incremental cost Doing so will require unprecedented concerted and coherent action on multiple fronts which may prove the biggest obstacle of all
