Scholars from an array of disciplines have trained fresh theoretical and methodological approaches onto new dimensions of the human relationship to food. This anthology capitalizes on this particular cultural moment to bring to the fore recent scholarship that focuses on innovative ways people are recasting food in public spaces to challenge hegemonic practices and meanings. Organized into five interrelated sections on food production, consumption, performance, diasporas, and activism, articles aim to provide new perspectives on the changing meanings and uses of food in the twenty-first century.

Food Analysis Suzanne Nielsen, 2003-04-30 This book provides information on the techniques needed to analyze foods in laboratory experiments. All topics covered include information on the basic principles, procedures, advantages, limitations, and applications. This book is ideal for undergraduate courses in food analysis and is also an invaluable reference to professionals in the food industry. General information is provided on regulations, standards, labeling, sampling, and data handling as background for chapters on specific methods to determine the chemical composition and characteristics of foods. Large expanded sections on spectroscopy and chromatography are also included. Other methods and instrumentation such as thermal analysis, selective electrodes, enzymes, and immunoassays are covered from the perspective of their use in the chemical analysis of foods. A helpful Instructor's Manual is available to adopting professors.
