The Synthetic Nitrogen Industry in World War I Anthony S. Travis, 2015-07-03 This concise brief describes how the demands of World War I often referred to as the Chemists War led to the rapid emergence of a new key industry based on fixation of atmospheric nitrogen Then as now nitrogen products including nitric acid and nitrates were essential for both fertilizers and in the manufacture of modern explosives During the first decade of the twentieth century this stimulated research into and application of novel processes This book illustrates how from late 1914 the relations and developments in the first modern military industrial complex enabled the great capital expenditures and technological advances that accelerated massive expansion particularly of the BASF Haber Bosch high pressure process that determined the direction of the post war chemical industry

Science and Conscience Jost Lemmerich, 2011-08-10 James Franck 1882-1964 was one of the twentieth century's most respected scientists known both for his contributions to physics and for his moral courage During the 1920s Franck was a prominent figure in the German physics community His research into the structure of the atom earned him the Nobel Prize in Physics in 1925 After the Nazis seized power in 1933 Franck resigned his professorship at

Gottingen in protest against anti Jewish policies He soon emigrated to the United States where at the University of Chicago he began innovative research into photosynthesis When the Second World War began Franck was recruited for the Manhattan Project With Enrico Fermi and Leo Szilard he created a controlled nuclear chain reaction which led to the creation of a nuclear weapon During the final months of the war however Franck grew concerned about the consequences of using such a weapon He became the principal author of the celebrated Franck Report which urged Truman not to use the atomic bomb and warned that a nuclear arms race against the Soviet Union would be an inevitable result After the War Franck turned his attention back to photosynthesis his discoveries influenced chemistry as well as physics **Lise Meitner**

Ruth Lewin Sime,1996-03-10 Lise Meitner 1878 1968 was a pioneer of nuclear physics and co discoverer with Otto Hahn and Fritz Strassmann of nuclear fission Braving the sexism of the scientific world she joined the prestigious Kaiser Wilhelm Institute for Chemistry and became a prominent member of the international physics community Of Jewish origin Meitner fled Nazi Germany for Stockholm in 1938 and later moved to Cambridge England Her career was shattered when she fled Germany and her scientific reputation was damaged when Hahn took full credit and the 1944 Nobel Prize for the work they had done together on nuclear fission Ruth Sime s absorbing book is the definitive biography of Lise Meitner the story of a brilliant woman whose extraordinary life illustrates not only the dramatic scientific progress but also the injustice and destruction that have marked the twentieth century **Homenatge professor Josep M.Costa. Austrian Jewish female physicist at the heart of the discovery of nuclear fission also looks at major developments in physics during her life Meitner was a colleague and friend of many giants of 20th century physics Max Planck her Berlin mentor Einstein von Laue Marie Curie Chadwick Pauli and Bohr She was the first woman to earn a Ph D in physics at the University of Vienna a pioneer in the research of radioactive processes and together with her nephew Otto Robert Frisch an interpreter of the process of nuclear fission in 1938 Yet at the end of World War II her colleague of thirty years radiochemist Otto Hahn alone was awarded the 1944 Nobel Prize in Chemistry for the discovery of nuclear fission a discovery based on years of research in which Meitner was directly involved before her secret 1938 escape from Nazi Germany to Sweden A story of one of the half dozen most remarkable women of the 20th century John Archibald Wheeler Princeton University Patricia Rife's biography truly brings Meitner to life both as a scientist and as a woman Rife weaves Meitner's personal struggles into the social and political fabric of her times For example the story of Meitner's early career is told against the backdrop of the development of the new physics with plentiful illumination of the limited prospects for women scientists in the German speaking world during the early twentieth century When Meitner's story enters the Nazi era including her escape from Germany it is as riveting as the best novel Catherine Westfall Technology and Culture A well written thorough readable and engrossing work Gary Goldstein Peace and Change a Journal of Peace Research Rife has produced an exciting book which reads like a novel and she gives justice to Meitner's life full of science and human stories The book is a beautiful tribute to an outstanding scientist it has a lot to teach us about our world and it is a great read I warmly recommend it to everyone interested in science and in history Structural Chemistry Lise Meitner comes to life as author Rife skillfully weaves social political and scientific events into a well researched and documented work Lists of Meitner's awards and publications and an extensive bibliography complete this excellent book Association of Women in Science Magazine The dramatic tale of the discovery of nuclear fission on the eve of WWII not just a story of ideas but also of the social and intellectual milieu in which these ideas were developed It is also the story of how a shy self effacing young woman through talent and hard work became a world class scientist Rife tells this story very well The Antioch Review The particular merit of Rife's biography of Austrian physicist Meitner is that it places her life and work within the historical context It is comprehensive generally clearly written and appropriate for undergraduate students Just enough science is included as to make clear the significance of her work Extensive bibliography informative footnotes Choice

Great War, Total War Roger Chickering, Stig Förster, 2000-09-11 The First World War was the first large scale industrialized military conflict in the world's history and it gave birth to the concept of total war The essays in this 2000 volume analyse the experience of the war in light of this concept's implications in particular the systematic erosion of distinctions between the military and civilian spheres With an emphasis on developments in Germany France Great Britain and the United States leading scholars from Europe and North America locate the First World War along a trajectory that began in the wars of the middle of the nineteenth century and culminated in worldwide

conflict in the middle of the twentieth century. The essays explore the efforts of soldiers and statesmen, industrialists and financiers, professionals and civilian activists to adjust to the titanic pervasive pressures that the military stalemate on the western front imposed on belligerent and neutral societies.

Inventing Polymer Science Yasu Furukawa, 2016-11-11 It would be difficult to overestimate the importance of polymer science to life in the twentieth century. Developments in polymer chemistry and engineering have led not only to the creation of a variety of substances such as synthetic fibers, synthetic rubber and plastic, but also to discoveries about proteins, DNA and other biological compounds that have revolutionized western medicine. For these reasons, the history of the discipline tells an important story about how both our material and intellectual worlds have come to be as they are. Yasu Furukawa explores that history by tracing the emergence of macromolecular chemistry, the true beginning of modern polymer science. It is a lively book, given human interest through its focus on the work of two of the central figures in the development of macromolecular chemistry: Hermann Staudinger and Wallace Carothers. In *Inventing Polymer Science*, Furukawa examines the origins and development of the scientific work of Staudinger and Carothers, illuminates their different styles in research and professional activities, and contrasts the peculiar institutional and social milieux in which they pursued their goals.

The Toxic Museum Helene Tello, 2023-12-29 The Toxic Museum examines the use of pesticides in German museum collections at the end of the 19th and early 20th centuries. It reconstructs the research of substances against harmful insects in museum collections within the historical context of the formation of nation states, colonialism, a strengthening chemical industry, the First World War, and the resulting broad-based hygiene movement through the lens of the Ethnologisches Museum (Ethnological Museum) in Berlin. Because of their persistence, the consequences of the use of pesticides in museum collections are now unmistakable and well documented in many places. Numerous objects are highly contaminated and are only accessible under difficult conditions regarding occupational health and safety. This creates obstacles for conservation and scientific processing as well as for mediation in the context of exhibitions and external loans. The most precarious and difficult situations arise when contaminated museum objects are repatriated to their countries of origin. This monograph examines contemporary challenges in the 21st-century museum landscape and contextualises the history of pesticide use at the turn of the 20th century. The Toxic Museum will be of great interest to students and scholars working in conservation, museology, monument preservation, art and cultural studies, ethnology, history, and economics.

Chemical Achievers Mary Ellen Bowden, 1997 This book was designed to help teachers supplement science curricula with human stories of discovery in the chemical sciences. *Chemical Achievers* presents the lives and work of two types of achievers. First are the historical greats, those chemical scientists most often referred to in introductory courses. Second are those scientists who made contributions in areas of the chemical sciences that are of special relevance to modern life and the career choices students will make. The human faces summarized in this book range from Robert Boyle to Glenn Seaborg and Stephanie Kwolek. In this lively and comprehensive collection of photographs and

biographies Bowden illuminates how much the chemical sciences owe to the individual achiever Over 150 images can be easily reproduced as overhead transparencies or other visual teaching aids
