From Chemical Philosophy to Theoretical Chemistry Mary Jo Nye, 1994-03-01 How did chemistry and physics acquire their separate identities and are they on their way to losing them again Mary Jo Nye has written a graceful account of the historical demarcation of chemistry from physics and subsequent reconvergences of the two from Lavoisier and Dalton in the late eighteenth century to Robinson Ingold and Pauling in the mid twentieth century Using the notion of a disciplinary identity analogous to ethnic or national identity Nye develops a theory of the nature of disciplinary structure and change She discusses the distinctive character of chemical language and theories and the role of national styles and traditions in building a scientific discipline Anyone interested in the history of scientific thought will enjoy pondering with her the question of whether chemists of the mid twentieth century suspected chemical explanation had been reduced to physical laws just as Newtonian mechanical philosophers had envisioned in the eighteenth century *Histories of the Electron* Jed Z.

Buchwald, Andrew Warwick, 2004-01-30 A biography of the electron and a history of the microphysical world that it opened up

Chemical Structure, Spatial Arrangement Peter J. Ramberg, 2017-05-15 Offering a comprehensive narrative of the early history of stereochemistry Dr Ramberg explores the reasons for and the consequences of the fundamental change in the meaning of chemical formulas with the emergence of stereochemistry during the last quarter of the nineteenth century As yet relatively unexplored by historians the development of stereochemistry the study of the three dimensional properties of molecules provides a superb case study for exploring the meaning and purpose of chemical formulas as it entailed a significant change in the meaning of chemical formulas from the purely chemical conception of structure to the physico chemical conception of molecules provided by the tetrahedral carbon atom This study is the first to treat the emergence of the unique visual language of organic chemistry between 1830 and 1874 to place in context the near simultaneous proposal of the tetrahedral carbon atom by J H van t Hoff and J A Le Bel in 1874 Dr Ramberg then examines the research programs in stereochemistry by Johannes Wislicenus Arthur Hantzsch Victor Meyer Carl Bischoff Emil Fischer and Alfred Werner showing how the emergence of stereochemistry was a logical continuation of established research traditions in chemistry In so doing he also illustrates the novel and controversial characteristics of stereochemical ideas especially the unprecedented use of mechanistic and dynamic principles in chemical explanation **From Chemical Philosophy to Theoretical Chemistry**

Generaciones cuánticas Helge Kragh, 2007-02 La primera historia exhaustiva de la f sica del siglo XX en un solo volumen es un libro que nos lleva desde el descubrimiento de los rayos X a mediados de la d cada de 1890 hasta la teor a de las supercuerdas de los a os noventa A diferencia de las historias de la f sica narradas s lo desde una perspectiva cient fica o desde una perspectiva social e

institucional Generaciones culturales combina ambas aproximaciones Kragh escribe sobre la ciencia pura con la experiencia de un físico competente pero con un estilo ameno y accesible para los no especialistas prestando atención a las aplicaciones prácticas de la ciencia desde los discos compactos hasta las centrales nucleares *Guide to Reprints*, 2000 **Arts & Humanities Citation Index**, 1995 A multidisciplinary index covering the journal literature of the arts and humanities It fully covers 1 144 of the world's leading arts and humanities journals and it indexes individually selected relevant items from over 6 800 major science and social science journals *Kvartal'nyi zhurnal istorii nauki i tekhniki*, 2000 *Novai[a] literatura po sot[s]ial'nym i gumanitarnym naukam*, 1996 **Technical Education and Industrial Training**, 1970 **Lectures on Theoretical and Physical Chemistry** Jacobus Henricus van't Hoff, 1898 **A Journey Through the Realm of Theoretical Chemistry** Fereydoon Milani-nejad, PhD, 2015-11-24 The main goal of this book is to show how human behavior could be explained in terms of chemical laws Chapter 1 Overview is devoted to this task subjects such as chemistry of mutual feelings connection and its stability love at first sight fate and will uplifting of the soul dual personality excited universe and more are explained qualitatively on terms of chemical laws in this chapter These concepts show that theoretical chemistry is readily and smoothly applicable to other disciplines such as sociology psychology philosophy social sciences and even theology As an example consider the following paragraph from chapter 3 There is a Beginning and there is an End There exist an infinite number of pathways between the Beginning and the End No matter what route one chooses the End will be the same Among the infinite number of pathways there is one pathway called reversible pathway Heavenly way with maximum efficiency There is another pathway for which the efficiency is zero Hell way All other pathways are combinations of these two extreme cases The closer the chosen path is to the ideal path the more rewarding the journey will be *Affinity and Matter: Elements of Chemical Philosophy, 1800-1865* Trevor Harvey Levere, 1971 *Pathways to Modern Chemical Physics* Salvatore Califano, 2012-05-26 In this historical volume Salvatore Califano traces the developments of ideas and theories in physical and theoretical chemistry throughout the 20th century This seldom told narrative provides details of topics from thermodynamics to atomic structure radioactivity and quantum chemistry Califano's expertise as a physical chemist allows him to judge the historical developments from the point of view of modern chemistry This detailed and unique historical narrative is fascinating for chemists working in the fields of physical chemistry and is also a useful resource for science historians who will enjoy access to material not previously dealt with in a coherent way **Introduction to the Study of Chemical Philosophy** Sir William Augustus Tilden, 1882 *Introduction to the Study of Chemical Philosophy* Sir William Augustus Tilden, 1876 *Theoretical Chemistry from the Standpoint of Avogadro's Rule & Thermodynamics* Walther Nernst, 1895 *Theoretical Chemistry From the Standpoint of Avogadro's Rule Thermodynamics* Walther Nernst, 2015-06-26 Excerpt from *Theoretical Chemistry From the Standpoint of Avogadro's Rule Thermodynamics* The first edition of the German text was translated by Prof C S Palmer of Colorado soon after its publication and long remained the

only English version of Nernst's valuable treatise. Meanwhile the original has passed through three further editions, has grown some two hundred pages in bulk and has gained in usefulness by repeated careful revision. Under these circumstances the English publishers in 1903 asked me to re-edit their translation. In doing this I have translated all the new matter contained in the fourth German edition and revised certain parts of the old in the endeavour to free the book from any mistakes and ambiguities that a first edition is so liable to contain. The bulk of the old text however remains as it was. About the Publisher: Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com.
