Another Person's Poison Matthew

Smith,2015-05-26 To some food allergies seem like fabricated cries for attention To others they pose a dangerous health threat Food allergies are bound up with so many personal and ideological concerns that it is difficult to determine what is medical and what is myth Another Person s Poison parses the political economic cultural and genuine health factors of a phenomenon that dominates our interactions with others and our understanding of ourselves For most of the twentieth century food allergies were considered a fad or junk science While many physicians and clinicians argued that certain foods could cause a range of chronic problems from asthma and eczema to migraines and hyperactivity others believed that allergies were psychosomatic This book traces the trajectory of this debate and its effect on public health policy and the production manufacture and consumption of food Are rising allergy rates purely the result of effective lobbying and a booming industry built on self diagnosis and expensive remedies Or should physicians become more flexible in their approach to food allergies and more careful in their diagnoses Exploring the issue from scientific political economic social and patient centered perspectives this book is the first to engage fully with the history of a major modern affliction illuminating society s troubled relationship with food disease nature and the creation of medical knowledge **Allergens and Allergen Immunotherapy**

Graham,2010 Attention Deficit Hyperactivity Disorder ADHD has achieved celebrity status in many Western countries yet despite considerable effort to prove its existence as a real disorder ADHD still suffers from a crisis of legitimacy Nonetheless diagnosis and prescription of medication has grown at a phenomenal rate since the late 1980s particularly in Western culture Numerous accounts exist explaining how the ADHD diagnosis functions as a convenient administrative loophole providing schools with a medical explanation for school failure medication to sedate the problem into submission or the means to eject children from mainstream classrooms This book provides a more holistic interpretation of how to respond to children who might otherwise be diagnosed with and medicated for ADHD a diagnosis which whether scientifically valid or not is unhelpful within the confine of the school Training teachers to recognise and identify ADHD symptoms or to understand the functions of restricted pharmaceuticals will only serve to increase the number of children diagnosed and the sale of psychoactive medications Research has shown that such activities will not help those children learn nor will it empower their classroom teachers to take responsibility for teaching such children well This book seeks to provide school practitioners with knowledge that is useful within the educational context to improve the educational experiences and outcomes for children who might

otherwise receive a diagnosis of ADHD

Allergic Diseases Roy Patterson,1980 Food Additives and Hyperactive Children C. Keith Conners,2012-12-06 The purpose of this book is to present an account of several different studies of the relationship of food additives to child behavior and learning problems Because the outcome of these studies has deep personal interest for many parents and their children I have tried to present the studies in such a way that the logic and evidence of the studies is comprehensible to informed adults interested in weighing the facts for themselves Unfortunately the facts do not always follow a straightforward course Part of my purpose has been to show the complexities lying in the way of the answers to apparently simple questions I believe it is healthy and important for parents to examine the scientific evidence on issues affecting their daily lives and to become aware of the process of research surrounding controversial claims regarding new therapies New ideas in behavioral science are often difficult to track down and evaluate and consequently there may be a large gap between therapeutic claims and evidence bearing on those claims The mother who wonders whether her child should be treated with a special diet is unlikely to have the facts necessary to make a judgment of the costs and benefits She should however know some of the major pitfalls in coming to a conclusion for or against such a course **New Zealand Medical Journal** ,1973
