further growth China's growing water problems also have a large impact worldwide with public health as well as economic impacts. If China were to rely heavily on food produced outside of China, the massive volume of food imports would raise food prices internationally. This book examines a series of water issues beginning with a description of the water shortage problems in China, particularly in the northern part of the country. It then looks at the government and farmers' responses and whether past policies have been effective in resolving the water problems. *Managing Water on China's Farms* documents the change of existing and new water management institutional forms over time and across provinces throughout northern China and then assesses the impacts of these changes in the rural sector. Finally, it examines potential solutions that the research has uncovered, answering the question: Who can build the bridge over China's troubled waters? Using analyses from information collected firsthand in China's rural villages, the series of surveys covers diverse geographic regions that are representative of north China and includes perspectives from multiple stakeholders such as village leaders, water managers, and farmers. The policy-oriented research and rich analysis in this book make it of interest to both policy makers and researchers with a focus on China's water problems. This book can also be used in a Master or Ph.D. level resource economics course. Uses case studies including problem factors, proposed solutions, and pros and cons of each to facilitate translational learning and application. Uses analyses of firsthand data collected from sources of irrigation water, irrigation systems, and water users. Covers governance and operation and maintenance (O and M) practices. Provides an informative quantitative and rigorous analysis of survey results. Provides practical and valuable data, including the detailed micro-level data that enables estimating strategies.

The Global Environment in the Twenty-first Century Pamela S. Chasek, 2000 This volume examines the roles of different actors in the formulation of international and national environmental policy. It starts from the premise that while cooperation among nation states has proven to be necessary to address many transboundary environmental issues, virtually all policies must be implemented at the national or local level. The growing interaction between national and international actors and levels of governance is an increasingly important aspect of international environmental policy. The authors examine the roles of state and non-state actors in safeguarding the environment and advancing sustainable development into the twenty-first century. Each of the five sections focuses on a different actor: states, civil society, market forces, regional arrangements, and international organizations. By examining the functions and capabilities of each of these actors, the authors analyse their effectiveness and their relationship with other actors both within and outside of the UN system, providing a useful framework for understanding the multi-actor, multi-issue nature of international environmental policy.
