At the 50th Anniversary Meeting of the Institute of Food Technologists, the ten most significant innovations in food science developed during the past 50 years were named. Food Technology, September 1989. Among the Top 10 innovations, controlled atmosphere packaging (CAP) for fruits and vegetables was listed 5th in order of importance. Of course, CAP is a forerunner of MAP (modified atmosphere packaging) in which a variety of food products are packaged under selective mixtures of atmospheric gases but without the on-going maintenance control of the gas mixture. Development of packaging systems and films that are selectively permeable to specific gases has been the key element in the commercialization of controlled and modified atmosphere packaging of foods. It may not be far from the truth to say that since then there has been an explosion of activities around MAP/CAP, especially in research and development into various

aspects of this technology The application of MAP to some bakery products fresh fruits and salads and fresh meats and meat products has reached a significant level both in Europe and North America The increasing consumer demand for fresh or near fresh products and convenient microwavable foods has added impetus to the growth of MAP CAP technology It is therefore timely that a comprehensive book that provides scientific background and practical applications of the technology should be written      *Advanced Dairy Chemistry* Paul L. D, 2011-02 All scientific claims indicate one result that food and nutrition is an integral part of medicine while medicine can not show its curing potential without a correct and complementary food and nutrition A blood thinning anticoagulant drug when combined with too much blood thinning food consumption can increase the risk of internal bleeding risk and may be fatal Bergamottin in grapefruit can inhibit the activity of liver enzymes and can cause the accumulation of radio and chemotherapeutic agents in blood which can increase the side effects of such anti carcinogen treatments Similarly fibers which are introduced as healthy food components with their weight loosing and cancer protecting effects may bind some important nutrients which may result in immunodeficiency and chronic fatigue

Omega 3 fatty acids as the healthiest fat options may even be fatal during ventricular tachycardia I have tried to inform the reader that there is no a completely healthy or a completely harmful food while there are some beneficial foods for some diseases and disorders I strongly believe that you will be able to enhance the curing potential of the traditional medicine with the correct food nutrition and life style for each disease which is carefully and scientifically analysed in the book Dr Ugur Gogus
