

Food Sharing

Food sharing is a vital cultural and social activity prevalent in many societies worldwide. In anthropology, the concept of food sharing extends beyond merely giving or receiving food. It reflects complex social norms, interpersonal relationships, social stratification, and symbolic meanings, forming a basis for exploring the interplay between culture, society, and human behavior.

Food Is For Sharing:

Food Sharing in Human Societies Nobuhiro Kishigami, 2022-01-01 This book explores why human beings share food with others using a humanistic anthropological approach This book provides a comparative examination of distinct features and historical changes in food sharing practices in various hunting gathering societies especially in the Inuit The author considers human nature through various human food sharing practices Food sharing is a characteristic of human behavior and has been one of the central topics in anthropological studies of hunter gatherers for a long time While anthropologists have attempted to understand it in functional historical adaptational social cultural psychological or phenomenological perspective they have failed to convincingly explain its origin variation existence or and change Recently evolutionary ecology or behavioral ecology has dominated research of the topic However neither of them adequately considers social cultural and historical factors in the analysis of human food sharing practices This book is an essential and fundamental study for every researcher interested in the relationship between human nature society and culture

Food Sharing Alessandra Pellerito, Ralf Dounz-Weigt, Maria Micali, 2019-08-20 This book presents the concept of food sharing from a European perspective and provides a concise analysis of its safety implications and the chemical properties of recovered foods In our modern world 33% of the total food produced is lost each year with serious economic environmental and social consequences Food worth approximately 1 trillion USD is wasted per year and it is estimated that this wasted food could feed more than 3.4 billion people Considering that 1.10 of the global population still does not have enough money for basic needs and in view of the impact of consumer behaviour food retailers and industry in food waste food sharing appears to be an attractive solution and several communities have recently been created with the main goal of saving food and giving it to those in need Despite the positive impact of food sharing it also raises concerns since recovered foods are subject to spoilage decay and irreversible chemical physical transformations In this book the authors explore the current situation and the regulatory definition of food sharing in various European countries presenting the German experience in the city of Magdeburg where food sharing networks have been implemented They also discuss the chemical and safety evaluations of durable foods and provide a simulation of food waste by comparing a food product with the same food produced with reworked and still edible raw materials recovered foods

Inviting Happiness: Food Sharing in Post-Communist Mongolia Sandrine Ruhlmann, 2019-09-16 For Mongols sharing food is more than just eating meals Through a process of opening and closing on a daily basis or at events in the

family circle or with visitors sharing food guarantees the proper order of social relations. It also ensures the course of the seasons and the cycle of human life. Through food sharing humans thus invite happiness to their families and herds. Sandrine Ruhlmann has lived long months since 2000 in the Mongolian steppe and in the city. She describes and analyzes in detail the contemporary food system and recognizes intertwined ideas and values inherited from shamanism, Buddhism, and communist ideology. Through meat on the bone, creamy milk skin dumplings or sole shaped cakes, she highlights a whole way of thinking and living.

The Food Sharing Revolution Michael S. Carolan, 2018-11-15. In *The Food Sharing Revolution* Michael Carolan tells the stories of entrepreneurs who are bucking the corporate food system. They are farmers like Josh, a co-op dairyman who doesn't own his cows but has a good income and a sense of autonomy. They are business owners like Dorothy who opened her bakery with the help of a no-interest crowd-sourced loan. They are chefs like Camilla who introduces diners to her native Colombian cuisine through peer-to-peer meal sharing. Each is making the most of the sharing economy while avoiding the pitfalls of Uber and Airbnb. Their success is not only good for aspiring producers but for everyone who wants a healthier, more sustainable and more ethical way to eat.

Moral Sentiments and Material Interests Herbert Gintis, 2005. *Moral Sentiments and Material Interests* presents an innovative synthesis of research in different disciplines to argue that cooperation stems not from the stereotypical selfish agent acting out of disguised self-interest but from the presence of strong reciprocators in a social group. Presenting an overview of research in economics, anthropology, evolutionary and human biology, social psychology, and sociology, the book deals with both the theoretical foundations and the policy implications of this explanation for cooperation. Chapter authors in the remaining parts of the book discuss the behavioral ecology of cooperation in humans and nonhuman primates, modeling and testing strong reciprocity in economic scenarios, and reciprocity and social policy. The evidence for strong reciprocity in the book includes experiments using the famous Ultimatum Game in which two players must agree on how to split a certain amount of money or they both get nothing.

The Adapted Mind Jerome H. Barkow, Leda Cosmides, John Tooby, 1995-10-19. Although researchers have long been aware that the species-typical architecture of the human mind is the product of our evolutionary history, it has only been in the last three decades that advances in such fields as evolutionary biology, cognitive psychology, and paleoanthropology have made the fact of our evolution illuminating. Converging findings from a variety of disciplines are leading to the emergence of a fundamentally new view of the human mind and with it a new framework for the behavioral and social sciences. First, with the advent of the cognitive revolution, human nature can finally be defined precisely as the set of universal, species-typical information processing programs that operate beneath the surface of expressed cultural variability. Second, this collection of cognitive programs evolved in the Pleistocene to solve the adaptive problems regularly faced by our hunter-gatherer ancestors: problems such as mate selection, language acquisition, cooperation, and sexual infidelity. Consequently, the traditional view of the mind as a general-purpose computer, tabula rasa, or passive recipient of culture is being replaced by

the view that the mind resembles an intricate network of functionally specialized computers each of which imposes contentful structure on human mental organization and culture The Adapted Mind explores this new approach evolutionary psychology and its implications for a new view of culture

Bonobos Brian Hare, Shinya Yamamoto, 2017-10-20 The bonobo along with the chimpanzee is one of our two closest living relatives Their relatively narrow geographic range south of the Congo River in the Democratic Republic of Congo combined with the history of political instability in the region has made their scientific study extremely difficult In contrast there are dozens of wild and captive sites where research has been conducted for decades with chimpanzees Because data sets on bonobos have been so hard to obtain and so few large scale studies have been published the majority of researchers have treated chimpanzee data as being representative of both species However this misconception is now rapidly changing With relative stability in the DRC for over a decade and a growing community of bonobos living in zoos and sanctuaries internationally there has been an explosion of scientific interest in the bonobo with dozens of high impact publications focusing on this fascinating species This research has revealed exactly how unique bonobos are in their brains and behavior and reminds us why it is so important that we redouble our efforts to protect the few remaining wild populations of this iconic and highly endangered great ape species
