FROM HAND AX TO LASER

"Looking has shaped human history more than the steady discovery of new and better ways to obtain and use energy, and no one has presented the fabulous story more accurately or more entertainingly than John Purcell. His carefully documented, richly illustrated, beautifully written volume will give you greater insight into the forces that shape civilization than a hundred books about great kings and queens and ancient battles and the torments games they played. Reading Purcell is the sitting in on a dozen college courses, with one exception—not once do you have an impulse to doze or fall asleep."

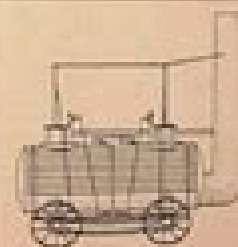

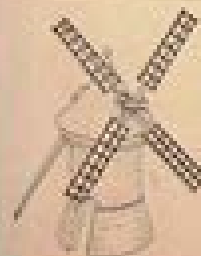

MARTIN GARDNER
author of
The Ambidextrous Universe;
Fads & Fallacies in the Name
of Science, etc.

"Long ago... Reading tradition and wit, archaeological research and jolting examples drawn from everyday experience, this engrossing saga offers a veritable education. The last two chapters leap into the modern age with that's engine and the harnessing of electricity. Illustrated throughout, the book is written in a simple style that seems intended for young adults as much as for grownups."

From Hand Ax To Laser Mans Growing Mastery Of Energy:

From Hand Ax to Laser John Purcell, Judy K. Skorpil, 1983-03 **From Hand Ax to Laser** John Francis Purcell, 1982
Traces man's endeavors to increase his own efficiency through the mastery of energy **Beyond Engineering** Robert Pool, 1997-07-17 We have long recognized technology as a driving force behind much historical and cultural change. The invention of the printing press initiated the Reformation. The development of the compass ushered in the Age of Exploration and the discovery of the New World. The cotton gin created the conditions that led to the Civil War. Now in *Beyond Engineering*, science writer Robert Pool turns the question around to examine how society shapes technology. Drawing on such disparate fields as history, economics, risk analysis, management science, sociology, and psychology, Pool illuminates the complex, often fascinating interplay between machines and society in a book that will revolutionize how we think about technology. We tend to think that reason guides technological development; that engineering expertise alone determines the final form an invention takes. But if you look closely enough at the history of any invention, says Pool, you will find that factors unrelated to engineering seem to have an almost equal impact. In his wide-ranging volume, he traces developments in nuclear energy, automobiles, light bulbs, commercial electricity, and personal computers to reveal that the ultimate shape of a technology often has as much to do with outside and unforeseen forces. For instance, Pool explores the reasons why steam-powered cars lost out to internal combustion engines. He shows that the Stanley Steamer was in many ways superior to the Model T: it set a land speed record in 1906 of more than 127 miles per hour; it had no transmission and no transmission headaches; and it was simpler. One Stanley engine had only twenty-two moving parts and was quieter than a gas engine, but the steamers were killed off by factors that had little or nothing to do with their engineering merits, including the Stanley twins' lack of business acumen and an outbreak of hoof and mouth disease. Pool illuminates other aspects of technology as well. He traces how seemingly minor decisions made early along the path of development can have profound consequences further down the road, and perhaps most important, he argues that with the increasing complexity of our technological advances, from nuclear reactors to genetic engineering, the number of things that can go wrong multiplies, making it increasingly difficult to engineer risk out of the equation. Citing such catastrophes as Bhopal, Three Mile Island, the Exxon Valdez, the Challenger, and Chernobyl, he argues that it is time to rethink our approach to technology. The days are gone when machines were solely a product of larger-than-life inventors and hard-working engineers. Increasingly, technology will be a joint effort, with its design shaped not only by engineers and executives but also by psychologists, political scientists, management theorists, risk specialists, regulators, and courts, and the general public. Whether discussing bovine growth hormone, molten salt reactors, or baboon-to-human transplants, *Beyond Engineering* is an engaging look at modern technology and an illuminating account of how technology and the modern world shape each other. **Physical Science Junior High School Science Series 1986**, 1986-06 The Challenge of Supplying Energy Gail B. Haines, 1991 Presents the current state of our energy supply

discussing how energy works how it is developed and who uses it **AAAS Science Book List, 1978-1986** Kathryn Wolff, Susan M. O'Connell, Valerie J.
