Economic Entomology in the Tropics Kenneth Percival Lamb, 1974 Insects good and bad Classification of insects and their arthropod relatives Springtails silverfish and some aquatic insects Cockroaches mantids and stick insects Termites Orthoptera dermaptera and some paraneoptera Hemiptera lepidoptera moths and butterflies The flies and fleas Beetles Hymenoptera Ecology of pest control Host resistance and susceptibility genetic controls Insecticides and their application Malaria control and eradication summary of major insect pests of tropical crops coffee tea cotton cocoa sugar cane rice coconuts **Agricultural Insect Pests of the Tropics and their Control** Dennis S. Hill, 1987-10-22 **Insect Pests in Tropical Forestry** F. R. Wylie, M. R. Speight, 2012 Insects are major pests of both natural and plantation forests in the tropics This book is the first to provide a broad based international review of this subject at a level suitable for advanced students and practitioners It describes the ecology and biology of the insects with special reference to the economic damage they cause to trees All relevant control strategies are addressed It is suitable for students researchers and practitioners of forestry ecology pest management and entomology in tropical and subtropical countries **Journal of Tropical Veterinary Science**, 1911 Subject Heading List National Agricultural Library (U.S.), 1963 *Subject Heading List, Preliminary Edition* National Agricultural Library (U.S.), 1963 *Tropical Agriculture*, 1924 **Tropical Medicine in the Twentieth Century** Helen J. Power, 2012-11-12 First published in 1998 Despite the upsurge of interest in the history of tropical medicine international public health and the provision of health care in colonial and post colonial tropical countries no major text discusses the history of the academic discipline in the twentieth century In Britain the two Schools of Tropical Medicine opened within six months of each other in the final year of the nineteenth century They have played a pivotal role in developing tropical medicine as an academic discipline in postgraduate medicine with an active research profile The Schools also affected the development of health care in the tropical colonies They trained the Medical Officers of the Colonial Medical Service and the indigenous doctors whose training failed to include infectious endemic diseases and lacked an emphasis on community health The Schools also contributed to a body of knowledge applied by the colonial powers international agencies and independent nation states as part of their health care programmes Ultimately the Schools helped the developing world to establish its own priorities for health This volume charts the history of the Liverpool School of Tropical Medicine from 1898 to 1990 *The Making of a Tropical Disease* Randall M. Packard, 2021-07-13 A global history of malaria that traces the natural and social forces that have shaped its spread and made it deadly while limiting efforts to eliminate it Malaria sickens hundreds of millions of people and kills nearly a half a million each year Despite massive efforts to eradicate the disease it remains a major public health problem in poorer tropical regions But malaria has not always been concentrated in tropical areas How did malaria disappear from other regions and why does it persist in the tropics From Russia to Bengal to Palm Beach Randall M Packard s far ranging narrative shows how the history of malaria has been driven by the interplay of social

biological economic and environmental forces The shifting alignment of these forces has largely determined the social and geographical distribution of the disease including its initial global expansion its subsequent retreat to the tropics and its current persistence Packard argues that efforts to control and eliminate malaria have often ignored this reality relying on the use of biotechnologies to fight the disease Failure to address the forces driving malaria transmission have undermined past control efforts Describing major changes in both the epidemiology of malaria and efforts to control the disease the revised edition of this acclaimed history which was chosen as the 2008 End Malaria Awards Book of the Year in its original printing examines recent efforts to eradicate malaria following massive increases in funding and political commitment discusses the development of new malaria fighting biotechnologies including long lasting insecticide treated nets rapid diagnostic tests combination artemisinin therapies and genetically modified mosquitoes explores the efficacy of newly developed vaccines and explains why eliminating malaria will also require addressing the social forces that drive the disease and building health infrastructures that can identify and treat the last cases of malaria Authoritative fascinating and eye opening this short history of malaria concludes with policy recommendations for improving control strategies and saving lives *Tropical Agriculturist and Magazine of the Ceylon Agricultural Society* ,1886 *Annals of Tropical Medicine and Parasitology* ,1907 Liverpool School of Tropical Medicine Scientific record compiled by Dorothy Allmand a history of the school and of its activities v 15 1921 p 1 47 *Integrated Pest Management in Tropical Regions* Carmelo Rapisarda, Giuseppe E Massimino Cocuzza, 2017-12-11 This book provides up to date and comprehensive coverage of the research and application of Integrated Pest Management IPM in tropical regions The first section explores the agro ecological framework that represents the foundations of IPM in addition to emerging technologies in chemical and biological methods that are core to pest control in tropical crops The second section follows a crop based approach and provides details of current IPM applications in the main tropical food crops such as cereals legumes root and tuber crops sugarcane vegetables banana and plantain citrus oil palm tea cocoa and coffee and also fibre crops such as cotton and tropical forests Postharvest Biology and Technology of Tropical and Subtropical Fruits Elhadi M. Yahia, 2011-06-30 While products such as bananas pineapples kiwifruit and citrus have long been available to consumers in temperate zones new fruits such as lychee longan carambola and mangosteen are now also entering the market Confirmation of the health benefits of tropical and subtropical fruit may also promote consumption further Tropical and subtropical fruits are particularly vulnerable to postharvest losses and are also transported long distances for sale Therefore maximising their quality postharvest is essential and there have been many recent advances in this area Many tropical fruits are processed further into purees juices and other value added products so quality optimization of processed products is also important The books cover current state of the art and emerging post harvest and processing technologies Volume 1 contains chapters on particular production stages and issues whereas Volumes 2 3 and 4 contain chapters focused on particular fruit Chapters in Volume 3 of this important collection review factors affecting the

quality of different tropical and subtropical fruits concentrating on postharvest biology and technology Important issues relevant to each specific product are discussed such as postharvest physiology preharvest factors affecting postharvest quality quality maintenance postharvest pests and diseases and value added processed products among other topics Along with the other volumes in the collection Volume 3 is an essential reference for professionals involved in the postharvest handling and processing of tropical and subtropical fruits and for academics and researchers working in the area Covers current state of the art and emerging post harvest and processing technologies Important issues relevant to each particular fruit are discussed such as postharvest physiology preharvest factors affecting postharvest quality and pests and diseases
