Economics And Medical Research:

Measuring the Gains from Medical Research Kevin M. Murphy, Robert H. Topel, 2010-04-15 In 1998 health expenditures in the United States accounted for 12.9% of national income the highest share of income devoted to health in the developed world The United States also spends more on medical research than any other country in 2000 the federal government dedicated 18.4 billion to it compared with only 3.7 billion for the entire European Union In this book leading health economists ask whether we are getting our money's worth From an economic perspective they find the answer is a resounding yes in fact considering the extraordinary value of improvements to health we may even be spending too little on medical research The evidence these papers present and the conclusions they reach are both surprising and convincing that growth in longevity since 1950 has been as valuable as growth in all other forms of consumption combined that medical advances producing 10% reductions in mortality from cancer and heart disease alone would add roughly 10 trillion a year's GDP to the national wealth or that the average new drug approved by the FDA yields benefits worth many times its cost of development The papers in this book are packed with these and many other surprising revelations their sophisticated analysis persuasively demonstrating the massive economic benefits we can gain from investments in medical research For anyone concerned about the cost and the value of such research from policy makers to health care professionals and economists this will be a landmark book
