**Paying the Piper** Michael McPherson, Morton Owen Schapiro, Gordon Winston, 2025-10-01 Rising tuitions and shrinking government budgets have pushed questions about productivity and resource use in U S higher education to the fore In *Paying the Piper* three distinguished researchers examine the many successes of U S higher education identify real problems and carefully analyze potential solutions Among the questions addressed are On what do colleges and universities spend their money and how have their spending patterns changed over time what does quality really mean in higher education and how is it related to price and cost what are appropriate measures of productivity and does increasing the amount of federal financial aid encourage colleges to raise their tuitions The essays comprising this volume demonstrate that the application of basic economic principles and a combination of both descriptive and econometric analyses can illuminate a number of issues Using economic concepts and tools to provide insight into these pressing questions *Paying the Piper* helps us to understand the recent past anticipate the future and develop policies that can influence the future

**Social Inequality** Kathryn Neckerman, 2004-06-18 Inequality in income earnings and wealth has risen dramatically in the United States over the past three decades Most research into this issue has focused on the causes global trade new technology and economic policy rather than the consequences of inequality In *Social Inequality* a group of the nation's leading social scientists opens a wide ranging inquiry into the social implications of rising economic inequality Beginning with a critical evaluation of the existing research they assess whether the recent run up in economic inequality has been accompanied by rising inequality in social domains such as the quality of family and neighborhood life equal access to education and health care job satisfaction and political participation Marcia Meyers and colleagues find that many low income mothers cannot afford market based child care which contributes to inequality both at the present time by reducing maternal employment and family income and through the long term consequences of informal or low quality care on children's educational achievement At the other end of the educational spectrum Thomas Kane links the growing inequality in college attendance to rising tuition and cuts in financial aid Neil Fligstein and Taek Jin Shin show how both job security and job satisfaction have decreased for low wage workers compared with their higher paid counterparts Those who fall behind economically may also suffer diminished access to essential social resources like health care John Mullahy Stephanie Robert and Barbara Wolfe discuss why higher inequality may lead to poorer health wider inequality might mean increased stress related ailments for the poor and it might also be associated with public health care policies that favor the privileged On the

political front Richard Freeman concludes that political participation has become more stratified as incomes have become more unequal Workers at the bottom of the income scale may simply be too hard pressed or too demoralized to care about political participation Social Inequality concludes with a comprehensive section on the methodological problems involved in disentangling the effects of inequality from other economic factors which will be of great benefit to future investigators While today s widening inequality may be a temporary episode the danger is that the current economic divisions may set in motion a self perpetuating cycle of social disadvantage The most comprehensive review of this quandary to date Social Inequality maps out a new agenda for research on inequality in America with important implications for public policy Economic Papers ,1990 *Education Finance in the New Millenium* Stephen Chaikind,William J. Fowler,2013-09-05 The 2001 Yearbook of the AEFA reaffirms the connections between the field of education finance and the wider education community Among the topics it examines are curricula reform outcome assessment accountability community control and privatization 2001 **Mathematics, Science, and Technology Education** ,1985 *Second Handbook of Research on Mathematics Teaching and Learning* Frank K. Lester,2007-02-01 The audience remains much the same as for the 1992 Handbook namely mathematics education researchers and other scholars conducting work in mathematics education This group includes college and university faculty graduate students investigators in research and development centers and staff members at federal state and local agencies that conduct and use research within the discipline of mathematics The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work The Handbook should also be a useful textbook for graduate research seminars In addition to the audience mentioned above the present Handbook contains chapters that should be relevant to four other groups teacher educators curriculum developers state and national policy makers and test developers and others involved with assessment Taken as a whole the chapters reflects the mathematics education research community s willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community Research Genres in Teacher Education Mary M. Kennedy,1991 **Learning Capital** Gary Scott,1997 In this book the relative contributions of a school and a pupil in producing cognitive achievement growth are theoretically isolated so that the efficiency of a school can be evaluated more objectively Using educational psychology and the neo classical economic method of constrained optimization it is argued that a school is responsible for supplying a pupil with a high learning rate while the pupil s contribution is measured by time on task or attention to a lesson Two surprising inferences are drawn from this model of school quality The most interesting result is that producing equality of achievement outcomes among pupils increases a school s ability to offer a maximum average learning rate given any level of expenditures which contradicts present theory A further implication is that the presumed market failure does not exist since private schools are found to be more equal than state schools Both of these

ideas are empirically supported using the High School and Beyond Data Incorporating these results into an analysis of a voucher policy suggests that efficiency can be increased by 15% and equality of cognitive achievement by 28% without forfeiting any integration within all schools
