Education, Welfare and the Capabilities Approach Hans-Uwe Otto, Holger Ziegler, 2010-02-18

Capabilities Approach The authors assess the potentials and pitfalls of the Capabilities Approach to issues of education and welfare. Renowned philosophers, sociologists, psychologists, economists and educational scientists explore the conceptual and practical implications of this approach for delivering socially just policies. The volume analyses the potentials and pitfalls of the Capabilities Approach (CA) which was initially developed by the Indian economist Amartya Sen and the American philosopher Martha Nussbaum. CA is considered as a philosophical approach to social justice, a scientific approach to research, welfare, production and eventually as a potentially new, practically adoptable fundament for educational and social service delivery. CA is one of the currently most influential attempts to reconcile the competing demands which are associated with the fundamental conceptions of equality, recognition and liberty and advocates an egalitarian political conception of social justice which is concerned with the cultivation, maximization and just distribution of the real freedom of individuals. Renowned philosophers, sociologists, psychologists, economists and educational scientists investigate the complex relation of education and welfare against the background of major economic, political and cultural transformations within and across European societies.

Geography Education's Potential and the Capability Approach Richard Bustin, 2019-08-10

This book explores the pivotal role that geography as a school subject plays in helping every young person achieve their educational potential. Expressed as GeoCapabilities, this concept draws on the capabilities approach developed by Amartya Sen and Martha Nussbaum applied to curriculum thinking in schools. While traditional subjects have often been deemed irrelevant and outdated in an overcrowded secondary school curriculum, subjects like geography have often been lost or combined with others to fulfil a broad skills agenda. More recent talk of a knowledge-led curriculum can often lead to the recitation of facts at the expense of developing deeper understanding. This book argues the concept of powerful geographical knowledge based on the work of Michael Young and David Lambert invests the subject of geography with its educational potential; this forms the basis of GeoCapabilities. GeoCapabilities focuses on both what is being taught and why and as such provides a framework of curriculum thinking which will be of interest and value to geography teachers, school leaders with curriculum development.
