Ecology and Utility Lincoln Allison, 1991 This book examines environmentalist thought through its connections to ancient philosophies and religions and a lineage which runs through romantic art and nineteenth century science The examination is conducted from a broad and skeptical utilitarian point of view Ecology and Utility of Plants Shukla R.S. & Chandel

P.S., 2010 This textbook has been designed to meet the needs of B Sc First Semester students of Botany for the University of Jammu under the recommended National Education Policy 2020 This textbook gives a thorough overview of Introduction to Microbes and Plant Kingdom it aptly covers diversity of microbes and cryptogams which deals with significance economic importance of microbes viruses bacteria bryophytes and pteridophytes respectively The book acquaints the students with systematic discussion on algal fungal lichens and phanerogam diversity further it extensively covers the study of gymnosperms and angiosperms Practical part has been presented systematically to help students achieve sound conceptual understanding and learn experimental procedures **Landscape Ecology** Dean L Urban, 2024-12-01 This is methods tools

textbook that covers the fundamental tasks in research and management at the landscape scale It brings together tools from a range of disciplines and presents them in a natural workflow that a practitioner can appreciate Alternative texts cover a narrower range of topics and or present the information without reference to a natural workflow The book begins with 2 fundamental applications that introduce the scope and challenges of working at the landscape scales sampling design and species distribution modeling These motivate several chapters that digress to cover the primary tools that ecologists use to work with multivariate and spatial data The book then returns to applications including site prioritization interpreting and forecasting landscape change and integrated assessment The tasks themselves follow a logical workflow of collecting and analyzing data applying the analyses to management decisions and interpreting the outcomes of these decisions in an integrated framework This book stems from two graduate level courses in Landscape Ecology taught at the Nicholas School of the Environment at Duke University The subject has evolved over time from a concepts based overview of what landscape ecology is to a more applied practicum on how one does landscape ecology As landscape ecology has matured as a discipline its perspectives on spatial heterogeneity and scale have begun to permeate into a wide range of other fields including conservation biology ecosystem management and ecological restoration Thus this textbook will bring students from diverse backgrounds to a common level of understanding and will prepare them with the practical knowledge for a career in conservation and ecosystem management **Human Behavioral Ecology** Jeremy Koster, Brooke Scelza, Mary K.

Shenk, 2024-03-14 Human behavioral ecology HBE applies the principles of evolutionary theory and optimisation to the study of human behavioural and cultural diversity Among other things HBE attempts to explain variation in behaviour as adaptive solutions to the competing life history demands of growth development reproduction parental care and mate acquisition This book is a comprehensive introduction to the theoretical orientation and specific findings of HBE It consolidates the insights

of evolution and human behaviour into a single volume that reflects the current state and future of the field It brings together leading scholars from across the evolutionary social sciences to provide a comprehensive and thought provoking review of the state of the topic Throughout the authors explain the latest developments in theory and highlight critical debates in the literature while also engaging readers with ethnographic insights and field based studies that remain at the core of human behavioral ecology

Integrating Ecology and Poverty Reduction Jane Carter Ingram, Fabrice DeClerck, Cristina Rumbaitis del Rio, 2011-11-25 The second volume of this series Integrating Ecology into Global Poverty Reduction Efforts Opportunities and solutions builds upon the first volume Integrating Ecology into Global Poverty Reduction Efforts The ecological dimensions to poverty by exploring the way in which ecological science and tools can be applied to address major development challenges associated with rural poverty In volume 2 we explore how ecological principles and practices can be integrated conceptually and practically into social economic and political norms and processes to positively influence poverty and the environment upon which humans depend Specifically these chapters explore how ecological science approaches and considerations can be leveraged to enhance the positive impacts of education gender relations demographics markets and governance on poverty reduction As the final chapter on The future and evolving role of ecological science points out sustainable development must be built upon an ecological foundation if it is to be realized The chapters in this volume illustrate how traditional paradigms and forces guiding development can be steered along more sustainable trajectories by utilizing ecological science to inform project planning policy development market development and decision making

Encyclopedia of Theoretical Ecology Dr. Alan Hastings, Dr. Louis Gross, 2012-05-31 This major reference is an overview of the current state of theoretical ecology through a series of topical entries centered on both ecological and statistical themes Coverage ranges across scales from the physiological to populations landscapes and ecosystems Entries provide an introduction to broad fields such as Applied Ecology Behavioral Ecology Computational Ecology Ecosystem Ecology Epidemiology and Epidemic Modeling Population Ecology Spatial Ecology and Statistics in Ecology Others provide greater specificity and depth including discussions on the Allee effect ordinary differential equations and ecosystem services Descriptions of modern statistical and modeling approaches and how they contributed to advances in theoretical ecology are also included Succinct uncompromising and authoritative a must have for those interested in the use of theory in the ecological sciences

Freshwater Fisheries Ecology John F. Craig, 2016-01-12 Inland fisheries are vital for the livelihoods and food resources of humans worldwide but their importance is underestimated probably because large numbers of small local operators are involved Freshwater Fisheries Ecology defines what we have globally what we are going to lose and mitigate for and what given the right tools we can save To estimate potential production the dynamics of freshwater ecosystems rivers lakes and estuaries need to be understood These dynamics are diverse as are the earth's freshwater fisheries resources from boreal to tropical regions and these influence how fisheries are both utilized and abused Three main

types of fisheries are illustrated within the book artisanal commercial and recreational and the tools which have evolved for fisheries governance and management including assessment methods are described The book also covers in detail fisheries development providing information on improving fisheries through environmental and habitat evaluation enhancement and rehabilitation aquaculture genetically modified fishes and sustainability The book thoroughly reviews the negative impacts on fisheries including excessive harvesting climate change toxicology impoundments barriers and abstractions non native species and eutrophication Finally key areas of future research are outlined Freshwater Fisheries Ecology is truly a landmark publication containing contributions from over 100 leading experts and supported by the Fisheries Society of the British Isles The global approach makes this book essential reading for fish biologists fisheries scientists and ecologists and upper level students in these disciplines Libraries in all universities and research establishments where biological and fisheries sciences are studied and taught should have multiple copies of this hugely valuable resource About the Editor John Craig is Editor in Chief of the Journal of Fish Biology and has an enormous range of expertise and a wealth of knowledge of freshwater fishes and their ecology having studied them around the globe including in Asia North America Africa the Middle East and Europe His particular interests have been in population dynamics and life history strategies He is a Fellow of the Linnean Society of London and the Royal Society of Biology

Urban Ecology Jürgen Breuste, Hildegard Feldmann, Ogarit Uhlmann, 2013-03-09 Provides an overview of international developments in urban ecology with many examples from cities worldwide In addition this book presents a unique exchange of experiences and ideas with a focus on cooperation between researchers and those involved in putting ideas into practice Topics include aims and standards for ecological cities the integration of ecological economic social and cultural aspects land use as a controlling factor ecologically responsible mobility and the integration of nature and landscape into urban development

Multivariate Statistics for Wildlife and Ecology Research Kevin McGarigal, Samuel A. Cushman, Susan Stafford, 2013-12-01 Wildlife researchers and ecologists make widespread use of multivariate statistics in their studies With its focus on the practical application of the techniques of multivariate statistics this book shapes the powerful tools of statistics for the specific needs of ecologists and makes statistics more applicable to their course of study Multivariate Statistics for Wildlife and Ecology Research gives the reader a solid conceptual understanding of the role of multivariate statistics in ecological applications and the relationships among various techniques while avoiding detailed mathematics and underlying theory More important the reader will gain insight into the type of research questions best handled by each technique and the important considerations in applying each one Whether used as a textbook for specialized courses or as a supplement to general statistics texts the book emphasizes those techniques that students of ecology and natural resources most need to understand and employ in their research Detailed examples use real wildlife data sets analyzed using the SAS statistical software program The book is specifically targeted for upper division and graduate students in wildlife biology forestry and ecology and for professional wildlife scientists and natural resource
