Redden,Jerry L. Hatfield,Hermann Lotze-Campen,Anthony E. Hall,2011-08-02 A major task of our time is to ensure adequate food supplies for the world s current population now nearing 7 billion in a sustainable way while protecting the vital functions and biological diversity of the global environment The task of providing for a growing population is likely to be even more difficult in view of actual and potential changes in climatic conditions due to global warming and as the population continues to grow Current projections suggest that the world s temperatures will rise 1 8 4 0 by 2100 and population may reach 8 billion by the year 2025 and some 9 billion by mid century after which it may stabilize This book addresses these critical issues by presenting the science needed not only to understand climate change effects on crops but also to adapt current agricultural systems particularly in regard to genetics to the changing conditions Crop Adaptation to Climate Change covers a spectrum of issues related to both crops and climatic conditions The first two sections provide a foundation on the factors involved in climate stress assessing current climate change by region and covering crop physiological responses to these changes The third and final section contains chapters focused on specific crops and the current research to improve their genetic adaptation to climate change Written by an international team of authors Crop Adaptation to Climate Change is a timely look at the potentially serious consequences of climate change for our global food supply and is an essential resource for academics researchers and professionals in the fields of crop science agronomy plant physiology and molecular biology crop consultants and breeders as well as climate and food scientists **Ecology of Arable Land — Perspectives and Challenges** M. Hill, 1991-11-14 The future of mankind depends on ever increasing agricultural production to provide food fibre fuel and other essential commodities This can only be achieved through a sound knowledge of the plants which feature prominently in agriculture This book describes these plants in detail together with the products which are obtained from them The opening chapter on world population and food supply is followed by a general introduction to plant structure The major part of the book then considers economically important field crops and pasture plants of temperate and subtropical regions on a family by family basis Fruit crops flowers and trees are not considered The book concludes with a discussion of physiological principles of crop growth and yield This is an introductory text suitable for the teaching of agricultural botany to undergraduate students and is intended to bridge the gap between classical botany and agronomy **The Future of**

Amazonia A. Hall, D. Goodman, 1991-01-12 The future of Brazilian Amazonia the world's largest remaining tropical rainforest hangs in the balance Two decades of destructive development have provoked violent struggles for control over the region's resources with disastrous social and environmental consequences This multi disciplinary collection reviews past experience but focusses on the latest phase of Amazonian settlement Chapters by leading authorities examine such issues as colonisation in the most recent frontier areas multinational mining projects hydro electric schemes and the military occupation of Brazil's borders After demonstrating how new government and business activities have exacerbated social tensions and ecological destruction the volume considers alternative more sustainable strategies
