A. Mooney,M. Godron,2012-12-06 The earth s landscapes are being increasingly impacted by the activities of man Unfortunately we do not have a full understanding of the consequences of these disturbances on the earth s productive capacity This problem was addressed by a group of French and U S ecologists who are specialists at levels of integration extending from genetics to the biosphere at a meeting at Stanford California sponsored by the National Science Foundation and the Centre National de la Recherche Scientifique With a few important exceptions it was found at this meeting that most man induced disturbances of ecosystems can be viewed as large scale patterns of disturbances that have occurred generally on a small scale in ecosystems through evolutionary time Man has induced dramatic large scale changes in the environment which must be viewed at the biosphere level Acid deposition and CO increase are two 2 examples of the consequences of man s increased utilization of fossil fuels It is a matter of considerable concern that we cannot yet fully predict the ecological consequences of these environmental changes Such problems must be addressed at the international level yet substantive mechanisms to do this are not available

Turner,2012-12-06 Landscape pattern is generated by a variety of processes including disturbances In turn the heterogeneity of the landscape may enhance or retard the spread of disturbance The complex relationship between landscape pattern and disturbance is the subject of this book It is designed to present an illustrative analysis of the topic presenting the perspectives of several different disciplines The book includes conceptual considerations empirical studies and management examples Important features include hypotheses about the spread of disturbance and the effects of scale changes in landscape studies the multidisciplinary approach and the explicit focus on the landscape level The intended audience comprises graduate students academics and professionals interested in landscape ecology The reader will receive a state of the art treatment of a current topic in landscape ecology      Land Surface Reclamation H. P. Sims,1982      **Applied Population Biology** S.K. Jain,L.W. Botsford,2007-07-23 An increasing variety of biological problems involving resource

management conservation and environmental quality have been dealt with using the principles of population biology defined to include population dynamics genetics and certain aspects of community ecology There appears to be a mixed record of successes and failures and almost no critical synthesis or reviews that have attempted to discuss the reasons and ways in which population biology with its remarkable theoretical as well as experimental advances could find more useful application in agriculture forestry fishery medicine and resource and environmental management This book provides examples of state of the art applications by a distinguished group of researchers in several fields The diversity of topics richly illustrates the scientific and economic breadth of their discussions as well as epistemological and comparative analyses by the authors and editors Several principles and common themes are emphasized and both strengths and potential sources of uncertainty in applications are discussed This volume will hopefully stimulate new interdisciplinary avenues of problem solving research
