Forestry Economics John E. Wagner, 2023-12-22 Forestry Economics introduces students and practitioners to the economics of managing forests and forest enterprises. The book adopts the approach of managerial economics textbooks and applies this to the unique problems and production processes faced by managers of forests and forest enterprises. What many future forest and natural resource managers need is to understand what economic information is and how to use it to make better business and management decisions. John E. Wagner draws on his 30 years of experience teaching and working in the field of forest resource economics to present students with an accessible understanding of the unique production processes and problems faced by forest and other natural resource managers. The second edition has been updated to include expanded discussion of compounding, discounting, and capital budgeting, as well as an expanded discussion of when to replace a capital asset that has i) costs but no direct revenue stream such as a machine, ii) costs and a direct annual revenue stream such as a solar array, or iii) costs and a periodic revenue stream illustrated by the forest rotation problem. New practical examples provide students with applications of the concepts being discussed in the text, most notably on New Zealand and a Radiata Pine (*Pinus radiata*) Plantation. A brand new chapter develops business plans for for-profit businesses to illustrate how a business plan is derived from the economic information contained within the Architectural Plan for Profit and how it can be used to make business decisions about continuing to operate a business or to start a new business. This textbook is an invaluable source of clear and accessible information on forestry economics and management, not only for economics students but also for students of other disciplines and those already working in forestry and natural resources.

The Economic Way of Thinking Paul Heyne, Professor of Economics and Deputy Director of the James M. Buchanan Center for Political Economy, Peter Boettke, David L. Each chapter contains questions with detailed solutions that cover the key principles of each chapter, a step-by-step review of each chapter, and analytical questions for students to consider.
